A complete and scholarly edition for the student of literature. The text is clear and well spaced, with the various readings in foot-notes. An introduction of 60 pages gives the facts of the poet's life and a discussion of his position in literature. Detailed notes on each poem occupy 150 pages. The volume is made more useful by an index of first lines as well as of titles.

*She Stoops to Conquer*. Goldsmith. Edited by Dudley Miles. (1s. 9d. net. Ginn.)

A pleasant edition, well illustrated. An introduction affords all the help the student is likely to need, and there are "Questions on Topics for Study" as well as notes.

*Hans Brinker; or, The Silver Skates*. By Mary Mapes Dodge. Edited by Orton Lowe. Illustrated by Sears Gallagher. (2s. net. Ginn.)

Things move so rapidly that for school use a simple story of Dutch life written fifty years ago requires editing and elucidation. But the editor keeps well in the background, and the book is not overloaded with either critical or informational notes. A map, some characteristic pictures, and a few notes are a gain to the volume.

*Pride and Prejudice*. By Jane Austen. Edited, with Introduction and Notes, by Frank Sieha, Jr. (3s. net. Ginn.)

"After all, the story is the thing, and pupils must come to know and love Jane Austen through what she herself has written." These words, written by the editor, indicate that the text is not overloaded with commentary. There is an introduction of a pleasant, gossipy nature that will help the reader to know the author, and some six pages of notes to 400 pages of text. The paper is good and the volume attractive.

*Alice's Adventures in Wonderland*. By Lewis Carroll. Edited by William J. Long and illustrated by Oliver Herford. (2s. 6d. net. Ginn.)

For American children many of the words Alice uses may be a little puzzling; hence the need for notes. An English child does not need to be told that by bathing-machines Alice means bathing-houses, and not machines like wringers and boilers. The edition is an attractive one; type, paper, pictures alike good.

*English Exercises for Middle Forms*. By J. H. Fowler. Part I. (2s. 6d. Macmillan.)

The introduction deals with paraphrase, summary, verse, common errors, and the essay. After this come 100 selected passages from standard authors, each passage covering a page or less. To each passage is appended a list of exercises. These exercises include subjects for essay, questions on the meanings of words and allusions in the passage, and questions on points of grammar.

*Studies in English Idiom: Supplementary Exercises*.

By G. Brackenbury. (1s. 6d. Macmillan.)

A useful set of exercises to be worked by students of the author's "Studies in English Idiom." They are a little more difficult than the exercises in the "Studies."

*Chapters on English*. By Otto Jespersen. (4s. 6d. net. Allen & Unwin.)

Prof. Jespersen here presents to the reader certain chapters taken from "Progress in Language." The larger work is well known to

(Continued on page 106).

**MEDICAL PRELIMINARY EXAMINATIONS.**

The  
**UNIVERSITY EXAMINATION  
 POSTAL INSTITUTION**

Provides courses in preparation for Medical Preliminary Examinations, more particularly for the Junior and Senior Examinations of the College of Preceptors. Full preparation in all subjects, 120 lessons, £5. 16s. 6d.; but the number of lessons required varies according to the student's knowledge at starting. Each lesson consists of very full lesson-notes, papers of questions, and answer-notes. Oral tuition, if preferred, private or in class, with or without residence. Prospectus and full particulars can be obtained from the Principal,

MR. E. S. WEYMOUTH, M.A. (Lond.),  
 17 Red Lion Square, London, W.C.1.

In One Volume, 360 pages, price 2s.; and in Six Parts, 3d. each.  
 Answers:—Complete in Cloth, 1s. 4d. Parts, 3d. each.

**THE LEADER ARITHMETIC**

By **GEORGE MERCHANT.**

"The explanations are simple and clear, and exemplified in adequate variety by worked examples. The exercises are very numerous and carefully graduated. A laborious and serviceable compilation."—*The Educational Times.*

"A useful work, including a series of carefully graduated exercises, with rules, explanations, and worked examples in the higher parts. It meets the needs of elementary, middle, and upper Schools in a marked manner."—*The School Guardian.*

**SIMPKIN, MARSHALL, HAMILTON, KENT, & CO.,** and all Booksellers.

**URGENT WAR WORK DURING THE VACATION.**

**THE KENSINGTON WAR HOSPITAL SUPPLY**  
 DEPOT is in urgent need of workers to meet appeals from hundreds of Hospitals at home and abroad. The work is most interesting, and all applicants on whose choice of 21 Departments they prefer to attend. All those who can give any time to assist our work should apply to HONORARY SECRETARY, 15 Kensington Square, W.8. Telephone: Western 1807.

THE INCORPORATED

**FROEBEL EDUCATIONAL INSTITUTE,**

COLET GARDENS, TALGARTH ROAD,  
 WEST KENSINGTON, LONDON, W.14.

President:

Right Hon. Sir W. MATHER.

Chairman and Treasurer: Mr. C. G. MONTEFIORE, M.A.

Secretary: Mr. ARTHUR G. SYMONDS, M.A.

**TRAINING COLLEGE FOR TEACHERS.**

Principal: Miss E. LAWRENCE.

Students are trained for the Examinations of the National Froebel Union, and other Examinations.

There is a small Loan Fund to assist Students who are unable to meet the full fees.

Prospectuses and all particulars as to Scholarships may be obtained from the PRINCIPAL.

**MASON'S SCRIPTURE MANUALS.**

IN these Manuals each chapter and verse of the Bible has been taken in order, and Questions similar to those set in the Oxford and Cambridge Local, the Pupil Teachers', and Diocesan Examinations carefully selected in every chapter, together with numerous Explanatory Notes collated from various commentaries. After each question, the answer is either given in full, or the number of the verse or verses in which it occurs.

The following Manuals are already published:—

The Four Gospels	each	0 9
The Acts of the Apostles	1	6
Genesis and Exodus	1	6
Joshua and Judges	1	0
Samuel I	0	9
Samuel II	0	9
Kings I	0	9
Kings II	0	9
Jeremiah	0	9
Ezra, Nehemiah, Esther, and Haggai	0	9
Corinthians II	0	9
The Church Catechism	0	9
Morning and Evening Services and Litany	1	6

**A Catechism on the Ten Commandments,** with one hundred Practical Questions specially adapted for Children of all Religious Denominations in Elementary Schools. Price 4d.

**Euclid (Book I) made easy for Young Beginners.** Price 1s.

**JAMES GALT & CO., MANCHESTER,  
 SIMPKIN, MARSHALL, & CO., LONDON.**

scholars, and when a further edition was called for the author decided to divide the original work into two parts, and to issue at once the second part separately. This deals in detail with the English language and its noun cases.

### HISTORY.

*The Beginnings of Modern Europe (1250-1450).* By Ephraim Emerton. (7s. 6d. net. Ginn.)

Dr. Emerton has undertaken the task of elucidating for students of history the somewhat confused period that lies between medieval and modern Europe. Up to the middle of the thirteenth century Europe had been swayed by two main ideas—feudalism and the Roman Church system. After the middle of the fifteenth century Europe becomes a family of independent States. The volume is readable throughout, as it is not overburdened with details, but deals with the evolution of historical principles.

*A Brief Survey of the Political Development of Europe.* By F. Waterton. (2s. 6d. net. Drane.)

The author starts with the revival of the Roman Empire in the West, about the year 800, and traces the growth of political ideas through the City States of Greece, through Feudalism and Monarchy, to the existing development of democracy. The design of the book is to supplement the ordinary class-books of English history by emphasizing for the pupil the continuity of English political thought, and at the same time giving him a brief outline of the growth of nationality in Europe.

*A Short History of France. From Caesar's Invasion to the Battle of Waterloo.* By Mary Duclaux (A. Mary F. Robinson). (10s. 6d. net. Fisher Unwin.)

This volume will meet with many readers at a time when our interest in our neighbours across the Channel has been greatly stimulated. One need not be a historian or a student to enjoy this well written sketch of the French nation. Miss Robinson knows France intimately, and has studied her history with sympathy; avoiding details, she produces a vivid impression of the spirit that has produced the France of to-day.

### GEOGRAPHY.

"Normal Tutorial Series."—*Contours and How to Draw Them.* By Victor H. Allemandy and W. Sidney Tranter. (1s. 6d. net. Normal Press.)

The reading of maps and the making of them are alike matters of active interest nowadays, quite removed from the academic remoteness that used to characterize them. The authors have included in this volume everything that is needed for understanding elementary surveying, reading Ordnance maps and reproducing them. The book is prepared especially for examination needs.

"Visual Geography." A Practical Pictorial Method of Teaching Introductory Geography. By Agnes Nightingale. Book III: *Many Lands.* (10d. Black.)

Another of these excellent little books for young children. At each opening there is a line drawing of an actual place in Japan, India, Canada, or other country. These pictures are to be coloured by the pupils. On the opposite page is a brief account of the picture in large type and hints as to colouring.

*The World We Live In.* An Illustrated Description of all the Lands and Seas of the Globe; their Peoples, Animals, Plants, and Products. Edited by Graeme Williams. Vol. IV. (Printed for subscribers. Waverley Book Company.)

Volume IV completes a large work of great extent and profound interest. The list of contributors includes the names of many well known geographers, and their writings are illustrated by pictures on almost every page. The present writer can testify to the popularity of the earlier volumes among school children, though the information given is equally interesting to the general reader of more mature years.

*Essentials of Practical Geography.* By B. C. Wallis. (4s. 6d. Macmillan.)

Mr. Wallis designs his book to coincide with a four years' course in geography. It consists of practical exercises, with the necessary explanations in each case, in map-reading, contours, rainfall, and the like.

### MATHEMATICS.

"Cambridge Tracts in Mathematics and Mathematical Physics."—No. 6 (Second Edition): *Algebraic Equations.* By G. B. Mathews, M.A., F.R.S., LL.D. No. 19: *The Algebraic Theory of Modular Systems.* By F. S. Macaulay, M.A., D.Sc. (2s. 6d. net and 4s. 6d. net respectively. Cambridge University Press.)

Both the above form very valuable additions to the now lengthy series of tracts to which they belong. The first named is substantially a reprint of the original issue. It has, however, been enlarged by the introduction of the condition that must obtain in order that a quintic in its general form may be metacyclic with regard to the

field of the coefficients. We owe the finding of this condition and the labour of calculating it in the first instance to Mr. W. E. H. Berwick, and the author of the present tract has incorporated in the text the new and important addition. In Tract No. 19 Dr. Macaulay deals ably with the subject of "The Algebraic Theory of Modular Systems." He contents himself largely with being a skilled exponent of the already well known authorities on this branch of mathematics, but he also contributes original theorems, and further, he introduces in the last section of his treatise the inverse system. Many mathematicians will find much valuable information concisely set forth and in a form easily accessible in both Prof. Mathews's and Dr. Macaulay's pamphlet texts.

*Analytic Geometry and Calculus.* By Frederick S. Woods and Frederick H. Bailey. (10s. 6d. net. Ginn.)

The authors have arranged this work out of their larger edition in two volumes. Some matters have been omitted and some new chapters added. There are some 2,000 problems: sufficient (or more than sufficient), the authors think, for a two years' course in a college.

*Theory of Maxima and Minima.* By Harris Hancock. (10s. 6d. net. Ginn.)

The author holds that it is very desirable, in the present state of mathematical science in the United States, that more attention should be given to the theory of maxima and minima. At present the student must be referred to abstruse volumes in foreign tongues. The author has prepared this book to meet the needs of students who want a clear statement in their own language of the important principles enunciated.

*Mensuration Made Easy; or, The Decimal System for the Million.* With its Application to the Daily Employments of the Artisan and the Mechanic. By Charles Hoare. (1s. net. Effingham Wilson.)

Probably few children now leave school without having had an opportunity of understanding decimal notation. But this was not the case always, and to many artisans and mechanics a decimal point remains a puzzle for want of the necessary simple explanation. Especially is this the case now that aeroplanes and guns have to be made to decimal measurements. This little book is much needed, and should receive a warm welcome in workshops.

*The Modern Geometry of the Triangle.* By William Gallatly. Second Edition. (2s. 6d. net. F. Hodgson.)

Some of the more important researches on the subject of the geometry of the triangle are here presented by the author, who expresses the hope that the theorems given will widen the outlook of teachers of mathematics, and lend new vigour to their work. Some of the articles are reprinted from *The Educational Times*. The chapters deal with Direction Angles, Medial and Tripolar Co-ordinates, Poristic Triangles, Simson Lines, Pedal Triangles, The Orthopole, Antipedal Triangles, Orthogonal Projection of a Triangle, Counter Points, Lemoine Geometry, and Pivot Points.

*Mathematics for Engineers.* Part I. Including Elementary and Higher Algebra, Mensuration and Graphs, and Plane Trigonometry. By W. N. Rose. (8s. 6d. net. Chapman & Hall.)

This is a new volume in the "D.U." (or "Directly Useful") Series. In this series the aim is to give the information that the working engineer requires, and at the same time to indicate the principle upon which the information is based. This treatise includes all the mathematical work needed by engineers in their practice and by students in all branches of engineering science. Part I will be followed by Part II, devoted to the calculus and its application, harmonic and vector analysis, and spherical trigonometry.

### SCIENCE.

*Everyday Physics.* A Laboratory Manual. By John C. Packard. (4s. 6d. net. Ginn.)

There are 61 "studies" in physics arranged for secondary schools or for colleges. They are designed that the pupil may see clearly the aim, and carry it out with the minimum of direction from the teacher. Number 25 is a "Study of a Diagram." In this lesson the apparatus consists of a diagram of the house to be heated, with position of boiler and the other necessities. Then follows an introduction explaining the principles of steam-heating. The object of the lesson is stated, and the method of obtaining the object—in this case, the understanding of American methods of heating houses. Each lesson is arranged on the same general plan.

*The Theory of Electricity.* By G. H. Livens. (30s. net. Cambridge University Press.)

The author has produced a general textbook on the mathematical aspects of modern electrical theory, and has aimed at presenting the complete subject in a consistent form. The treatment is based mainly on the original Faraday-Maxwell theory, generalized and extended to the case of moving systems by Sir Joseph Larmor. The exposition of the subject is essentially mathematical, but much of the purely analytical mathematics usually associated with the subject has been omitted. Special attention is given to the rigorous formulae.

THE NEW SERIES OF LITERARY READERS OF SUPREME EXCELLENCE.

MCDUGALL'S

**GATEWAYS TO BOOKLAND**

In the lower books the tales, folk-lore stories, &c., are retold in simple language; in the upper books unaltered passages from the great authors are used, and among these are long selections of sustained interest.

Every lesson has a real literary value, and every-lesson has a real interest for the pupil.

The type of the books is large and clear, the paper is white and unglazed, the binding is strong and flexible. The illustrations in colour are mainly reproductions of well-known gallery pictures; those in line include the works of our foremost artists. The books are suitable for pupils from 8 to 16 years of age.

lation of underlying physical principles, and to their translation into a mathematical theory; at the same time the dynamical aspects of the subject are kept well to the fore.

#### RELIGION.

"Cambridge Bible for Schools."—*The Book of Joshua*. In the Revised Version, with Introduction and Notes by G. A. Cooke. (2s. 3d. net. Cambridge University Press.)

This series, under the general editorship of Dr. Kirkpatrick, is well known and widely used. The present edition differs from its predecessors only by being printed on War paper. The notes are very full, and occupy many times the space of the text. Some of them might well be omitted; it is distracting to the young student to find a dozen lines of text and the rest of the page filled with commentary.

*Where is your Faith?* The Problem of Recruiting for Christ's Army in the Public Schools. By Nowell Smith. (1s. net. Milford.)

A straightforward, sincere, and useful pamphlet, which will be read with interest by all who teach Divinity in public schools. Mr. Nowell Smith is always worth listening to; in this volume he is especially so, for he has dared to discuss with frank sincerity the very matters that have for some years past been treated as sleeping dogs, and which have been allowed to continue their slumber for fear of the annoyance that might be caused by the barking resultant on their awakening.

#### ECONOMICS.

*Outlines of Economics*. By R. E. Nelson. (2s. Bell.)

A useful book for younger students in technical colleges, to be used in conjunction with a course on industrial history. Explanations needed by beginners are given, especially to enable them to use the terms of economics to explain ordinary industrial phenomena, and so to make the study of economics real to them.

#### GARDENING.

*The Book of the School Garden*. By Charles F. Lawrance, F.R.H.S. (3s. 6d. net. Evans.)

Mr. Lawrance has been Horticultural Instructor in two counties, and therefore writes from practical experience of school gardens. His book should certainly find a place on the gardening shelf of all schools; it is clear, well arranged, covers the whole subject, and is based on scientific principles.

#### SCHOOL CADETS.

*The Younger Branch*. Sketches of a Cadet Camp.

By G. E. S. Coxhead. (3s. 6d. net. Melrose.)

As all cadets and their parents will enjoy reading Mr. Coxhead's sketches, the book is assured of a wide circulation. The description of camp life is full of vigour, and the boys' early ignorance of campaigning gives opportunity for plenty of fun. The author is a schoolmaster, and knows boys; he is able to see beneath the thick veil of apparent indifference with which boys like to cover their feelings; he shows that military discipline appeals to them as of practical value in view of tasks to be done. Mr. Coxhead has done a good piece of work.

#### GIRL GUIDES.

*Girl Guiding*. A Handbook for Guidelets, Guides, Senior Guides, and Guiders. By Sir Robert Baden-Powell. (1s. 6d. net. Pearson.)

The Girl Guides have been somewhat halting in their organization, but now the movement is placed on a firm basis, and the publication of this book completes the edifice. The close co-operation between the Guides and the Scouts is assured by the fact that Sir Robert Baden-Powell is law-giver to both, and it will probably be found possible to carry out the training of boys and girls in the same groups. This book follows the lines of "Scouting for Boys," and gives all the information needed, together with much helpful comment.

#### LONDON.

"The Blue Guides."—*London and its Environs*. Edited by Findlay Muirhead. (7s. 6d. net. Macmillan.)

This is the first of a new series of guidebooks, destined perhaps to take the place of the well known "Baedeker." It has been compiled since the War and represents London of to-day. It contains an enormous amount of information and excellent maps and plans. Its appearance will be welcomed as much by Londoners as by visitors.

#### THE DOCTOR AT HOME.

*A Medical Dictionary*. By W. B. Drummond. (10s. 6d. net. Dent.)

This volume has been specially prepared for those who are called upon for medical knowledge, preventive or curative, in the absence of professional help. It will be found useful to social workers, school teachers, and especially in school boarding houses, district visitors, clergymen, factory inspectors, and welfare workers. The articles are clear, the plates and other illustrations very helpful.

## THE COLLEGE OF PRECEPTORS.

### MEETINGS OF THE COUNCIL.

A MEETING of the Council was held at the College of Preceptors, Bloomsbury Square, W.C., on the 11th of May, 1918. Present: Mr. R. F. Charles, Vice-President, in the Chair; Dr. Armitage-Smith, the Rev. F. W. Aveling, Mr. Bain, Mr. Bayley, the Rev. J. O. Bevan, Mr. Brown, Mr. Cholmeley, Dr. Elizabeth Dawes, Dr. Dickinson, Mr. Eagles, Mr. Hawe, Miss Lawford, Mr. Longsdon, Mr. Millar Inglis, the Rev. Dr. Nairn, Miss Punnett, Mr. Roscoe, Mr. Rushbrooke, the Rev. C. J. Smith, Mr. Starbuck, the Rev. Canon Swallow, Mr. Thornton, Mr. Vincent, and Mr. Whitbread.

The Diploma of Associate was granted to Richard James Mahoney Lewin, who had satisfied the prescribed conditions.

Sir Philip Magnus was re-elected President of the Council, and Prof. John Adams, Mr. R. F. Charles, and Mr. J. F. P. Rawlinson, were re-elected Vice-Presidents of the Council.

Mr. Rushbrooke was reappointed Dean of the College, and Dr. G. Armitage-Smith was reappointed Treasurer.

Mr. F. Tiernay was appointed Solicitor to the College for the ensuing year.

The Moderators, Revisers, Examiners, and Inspectors for the ensuing year were appointed, and the following new appointments were made:—Moderator in Classics, Prof. J. S. Reid; Reviser in Classics, Mr. W. W. Walker; additional Examiner in Classics, Mr. F. H. Colson; additional Examiners in Mathematics, Mr. W. G. Bell and Mr. W. D. Eggar.

The Standing Committees for the year ending May 1919 were appointed.

Mr. Rushbrooke was appointed the representative of the College on the Teachers Registration Council for the triennial period beginning the 1st of July, 1918.

The Council appointed the following dates for the Meetings of the Council and for the Ordinary Half-yearly General Meetings of the Members of the College during the year ending May, 1919:—

#### COUNCIL MEETINGS.

1918.	1919.
Wednesday, 26th June.	Saturday, 18th January.
Saturday, 28th September.	Wednesday, 26th February.
Saturday, 26th October.	Saturday, 29th March.
Wednesday, 27th November.	Saturday, 10th May.

#### GENERAL MEETINGS.

1918.	1919.
Saturday, 26th October.	Saturday, 29th March.

The following persons were elected members of the College:—

- Miss E. Magill, A.C.P., St. Elmo, Gibauderie, Guernsey.
- Mr. J. May, M.A., Aberdeen, F.C.P., 17 Willoughby Road, Hampstead, N.W.
- Mr. P. Murray, L.C.P., Arranmore, Burton Port, co. Donegal.
- Miss M. R. Pétters, A.C.P., Benoni, Beatrice Terrace, Hayle, Cornwall.
- Mr. F. C. Smale, B.Sc. Lond., L.C.P., 68 Edburton Avenue, Brighton.
- Mr. W. Stratford, A.C.P., 10 Priory Avenue, Taunton.
- Mr. R. G. Underhill, A.C.P., Heather Lea, Grange Road, Ryton-on-Tyne.
- Miss N. H. Woodham, A.C.P., 39 Anderson Road, Erdington, Birmingham.

The following books had been presented to the College since the last meeting of the Council:—

By Mr. N. K. DIXSIT.—Report on Public Instruction in the Baroda State for the Year 1915-16.

By the GENERAL MEDICAL COUNCIL.—Minutes of the General Medical Council for the Year 1917; General Index to the Minutes of the General Medical Council, 1903-1917.

By GINN & Co.—Cool's Spanish Composition; Dorado's España Pintoresca; Goggio's Due Commedie Moderne; Holbrook's Living French; Moore's Fifty Years of American Education; Phelps's Italian Grammar; Schevill's First Reader in Spanish.

By MACMILLAN & Co.—Treble's Jane Austen's Pride and Prejudice (abridged).

Calendar of Durham University.

A MEETING of the Council was held at the College of Preceptors, Bloomsbury Square, W.C., on the 26th of June, 1918. Present:—Sir Philip Magnus, President, in the chair; Prof.

J. W. Adamson, the Rev. F. W. Aveling, the Rev. J. O. Bevan, Mr. Brown, Mr. F. Charles, Mr. Cholmeley, Dr. Dickinson, Mr. Eagles, Mrs. Felkin, Miss Frodsham, Mr. Hardie, Mr. Hay, Mr. Holland, Miss Lawford, the Rev. R. Lee, Mr. Millar Inglis, Mr. Pandlebury, Mr. Rushbrooke, Mr. Starbuck, and Mr. Thornton.

Prof. John Adams was appointed to deliver the next Course of Twelve Lectures to Teachers on the Practice of Teaching.

Mr. E. R. Pigrome, L.C.P., Ebbw Vale, Withdean, Brighton, was elected a member of the College.

A Special Committee was appointed to consider and report upon the future policy of the College.

The Secretary reported the action taken with reference to the appeal of the head master of a private school at Ongar for exemption from military service. The Board of Education having expressed inability to support the appeal, Sir Philip Magnus asked the Minister of National Service the following question in the House of Commons:—

Whether his announcement, as reported in a circular of the Board of Education of 9th May, 1918, as regards cases where the withdrawal of men from their civil work would involve the crippling of the work in particular schools is applicable to the head masters and assistant masters of efficient private schools; and, if so, whether the Board of Education are enabled as required to make recommendations on behalf of masters of private schools as well as of State-aided schools?

The reply to the question, with supplementary questions and answers, appears thus in the official report of the proceedings in the House on the 5th of June:—

The Parliamentary Secretary to the Ministry of National Service (Mr. Beck): Due consideration is given to recommendations made by the Board of Education in exceptional cases of schoolmasters not covered by the general provisions of the current instruction regarding the recruitment of teachers. Such recommendations are not confined to State-aided schools, but include certain private schools which are recognized by the Board as efficient, or have otherwise satisfied the Board as to their efficiency and educational importance. Such recommendations are, of course, confined to cases in which the Board of Education are satisfied as to the indispensability of the individual concerned.

Sir P. Magnus: Has the case of the Head Master of Ongar Grammar School been brought to the notice of the hon. gentleman, and can he state from whom recommendations could be made in the event of the Board of Education correctly stating that they have no authority to make recommendations with regard to private schools?

Mr. Beck: I think there is some misapprehension. The Board of Education have authority to make recommendations, and we work under an agreement with the Board of Education by which teachers are not exempted under forty-three, and Grade 2 teachers are not exempted under thirty-five.

Sir P. Magnus: Will the hon. gentleman answer the first part of the question, whether in the case of the Head Master of Ongar Grammar School—

Mr. Speaker: The hon. member must give notice of that question. Mr. Rawlinson: Is the proper course for a schoolmaster to apply to the Board of Education for a recommendation?

Mr. Beck: My hon. and learned friend will find that instructions have been issued of quite an elaborate character, and I think the whole thing is well known now.

Mr. Pringle: Is it not the case that men formerly classed in Grade 3 are now being classed in Grade 1, under forty-three years of age?

Mr. Beck: I entirely deny that.

On the 26th of June Sir Philip Magnus asked the Minister of National Service the following further question:—

Whether, having regard to the representations of the Board of Education that they are unable during the War, unless under very exceptional circumstances, to inspect private schools, he will accept, pending further arrangements for inspection by the Universities, the recommendation of the Local Education Authority as to the crippling effect on the work of a private school of the calling up of its head master for military service.

Mr. Beck replied:

As my honourable friend is aware, I am in communication with the President of the Board of Education on this subject, and regret being unable to make any definite statement at present.

The Secretary drew attention to certain amendments in the Education Bill which affect the position of private schools, viz.:—

(a) The amendment of Clause 4, which relates to schemes

(Continued on page 110.)

# A. & C. BLACK'S LIST

## SENTINEL READERS.

Edited by E. E. SPEIGHT.

Each volume with 8 full-page plates in colour.

Book I	...	Price	1/-
Book II	...	"	1/4
Book III	...	"	1/8
Book IV	...	"	1/8
Book V	...	"	1/8
Book VI	...	"	2/-

Sentinel Hours (an Anthology of Prose and Verse). 2/-

The aim of this set of Readers is not only to awaken intelligence and impart knowledge, but to widen the sympathies of boys and girls in all humane directions.

## LITERARY READERS.

Edited by JOHN FINNEMORE

(Author of "Social Life in England," &c.).

Each volume with 8 plates in colour and many in black and white.

Book I.	Including Introduction to Little Folk of Many Lands	...	Price.	1/-
Book II.	"Introducing the British Empire: how won, how kept, how used"	...	"	1/4
Book III.	Dealing with North America	...	"	1/8
Book IV.	Dealing with Australia, New Zealand, and South Africa	...	"	1/8
Book V.	Dealing with the Indian Empire	...	"	2/-

The special feature of this set of Readers is that in all Books above the Second an attempt is made to show how Britain came by her world-wide Empire.

## PICTURE LESSONS IN ENGLISH.

Each containing 14 full-page Illustrations in colour, Questions, and Notes.

Demy 8vo. Price 10d. each, Limp Cloth.

Book I	...	For Stds. I & II.
Book II	...	For Stds. III & IV.
Book III	...	For Stds. V & VI.
Book IV	...	For Stds. VI, VII, & Ex-VII.

No plan of approaching this subject is better than that of using pictures which assist the pupil in the work of self-interrogation and at the same time cultivate the habit of observation.

## A FIRST COURSE OF ESSAY WRITING.

By J. H. FOWLER, M.A.

Price 8d., Limp Cloth.

The aim of this little book is to reduce the number of those unpleasant and often unprofitable minutes which a beginner spends in contemplation of the "theme" that has been given him. It tries to show him that he really does know something about the subject on which he has to write; to suggest to him some points that he would do well to think about; to suggest also an order in which the points may be taken.

## COMPOSITION FOR JUNIOR FORMS.

By GEORGE H. GREEN, L.C.P.

Containing 15 full-page Illustrations, of which 8 are in colour. Crown 8vo. Price 1/6.

This book provides material which is suited for development in class discussions, and which is likely to promote a love of self-expression by means of prose writing on the part of pupils ranging from ten to fourteen years of age. The exercises are numerous, and of an interesting and suggestive character. It deals with composition only, and is in no sense a handbook of grammatical rules and questions. A noteworthy feature is the selection of beautiful illustrations which have been employed as the basis of many interesting and stimulating exercises.

A. & C. BLACK, Ltd.,

4, 5, & 6 Soho Square, London, W.1.

submitted by Local Education Authorities, by the addition of a stipulation that "a Council in preparing schemes under the Bill shall have regard to any existing supply of efficient and suitable schools or colleges not provided by Local Education Authorities, and to any proposal to provide such schools or colleges."

(b) The amendment of Clause 6, which provides for the appointment of Joint Committees by Local Councils co-operating with one another, and which permits the inclusion in such Joint Committees of "persons of experience in education and of representatives of the Universities or other bodies," by the insertion of the words "teachers or other" before the words "persons of experience in education."

(c) The amendment of Clause 8 by the deletion of sub-section (3), viz.: "The question whether a child, who is not attending a school recognized by the Board of Education as efficient, is under efficient instruction within the meaning of the Education Acts, or any by-laws relating to school attendance made thereunder, shall be determined by the Local Education Authority, or, in the case of a child attending a school or educational institution which the Board of Education or the Local Education Authority are enabled to inspect, if the parent of the child so desires, by the Board of Education, and any such determination shall be final and conclusive."

(d) The amendment of sub-section (2) of Clause 10 in such a way that the recognition of a school as efficient by a British University, equally with such recognition by the Board of Education, makes full-time attendance in that school up to the age of sixteen years a ground of exemption from the obligation to attend continuation schools. The amendment, which was secured through the efforts of Sir Philip Magnus, is as follows:—"Where a school supplying secondary education is inspected by a British University, or in Wales by the Central Welsh Board, under regulations made by the Inspecting Body after consultation with the Board of Education, and the Inspecting Body reports to the Board of Education that the school makes satisfactory provision for the education of the scholars, a young person who is attending, or has attended, such a school shall be entitled to such exemption as he would be entitled to under this section if he were attending, or had attended, a school recognized by the Board of Education as efficient."

The following books had been presented, to the College since the last meeting of the Council:—

By the CAMBRIDGE UNIVERSITY PRESS.—Lobban's Shakespeare's King Richard II.

By MACMILLAN & CO.—Siepmann's Erckmann-Chatrian's L'Ami Fritz, Mérimée's Colomba, and French Series for Rapid Reading (7 Parts).

By the OXFORD UNIVERSITY PRESS.—Dunn's Select Poems of Wordsworth. The Medical Register. The Dentists' Register. The Register of Veterinary Surgeons.

### CLASS-BOOKS FOR JUNIOR AND PRELIMINARY STUDENTS.

#### Mathematics and Science.

**ALGEBRA, JUNIOR.** By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. 3s. 6d. With Answers, 4s.

"Maintains the high standard of excellence we are accustomed to expect from so well known a source. The treatment of the graphic portion is particularly good."—*Journal of the Assistant Masters' Association.*

**ALGEBRA, JUNIOR, TEST QUESTIONS IN.** By F. ROSENBERG, M.A., B.Sc. 1s. 6d. With Answers, 1s. 9d.

"A handy little volume containing a complete series of examples carefully graded, suitable for Junior classes."—*Educator.*

**ARITHMETIC, PRELIMINARY.** By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. 2s. With Answers, 2s. 3d.

"The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—*School Guardian.*

**ARITHMETIC, THE JUNIOR.** By R. H. CHOPE, B.A. With or without Answers. *Third Edition.* 3s. 6d.

"No better Arithmetic for school work has come into our hands."—*Educational News.*

"The book is well got up, and has a quite good selection of examples throughout."—*Mathematical Gazette.*

**ARITHMETIC, JUNIOR, TEST QUESTIONS IN.** Edited by A. G. CRACKNELL, M.A., B.Sc. 1s. 6d. With Answers, 1s. 9d.

"No better supplement to the ordinary class-book could be desired."—*Secondary School Journal.*

**BOTANY, JUNIOR.** By FRANCIS CAVERS, D.Sc. 3s. 6d.

"Dr. Cavers has achieved a useful little book."—*Journal of Botany.*  
"A very excellent volume. Practical to a high degree. The diagrams are very good."—*Schoolmaster.*

**CHEMISTRY, PRELIMINARY.** By H. W. BAUSOR, M.A., late Scholar of Clare College, Cambridge. 2s.

"It is an excellent little book, and will make a clear understandable foundation for a systematic treatment of chemistry in the higher forms."—*Educational News.*

**CHEMISTRY, JUNIOR.** By R. H. ADIE, M.A., B.Sc. *Second Edition.* 3s. 6d.

"The results of fifteen years' experience of a thoughtful teacher are always valuable, and, as one might have anticipated, the book offers a thoroughly sound course of practical instruction."—*Nature.*

**CHEMISTRY, JUNIOR PRACTICAL.** By H. W. BAUSOR, M.A. 1s. 6d.

"An excellent guide for the beginner in practical laboratory work."—*Educational Times.*

**GEOMETRY, PRELIMINARY** By R. ROSENBERG, M.A., B.Sc., With or without Answers. 2s. 9d.

"Will prove distinctly helpful to the beginner in the study of geometry."—*Bookseller.*

"A clearly written and well thought out textbook, which ought to appeal to thousands of Junior Students who are worried about geometry and its meaning. The type and diagrams are clear."—*Electricity.*

**GEOMETRY, JUNIOR.** By A. G. CRACKNELL, M.A., B.Sc. 3s. 6d.

"A simple treatment of the elements of geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster.*

**HEAT, JUNIOR.** By JOHN SATTERLY, D.Sc., M.A. 2s. 9d.

"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal.*

**MAGNETISM AND ELECTRICITY, JUNIOR.** By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 3s. 6d.

"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times.*

"This book should not have any difficulty in holding its own, for it is one of the best regarded from the standpoint of exact thinking."—*Electrical Engineering.*

**SCIENCE, JUNIOR EXPERIMENTAL.** By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. *Second Edition.* 3s. 6d.

"The explanations are clear, and we can recommend the work heartily."—*Secondary Education.*

#### Languages, History, and Geography.

**ENGLISH COURSE, PRELIMINARY.** By A. M. WALMSLEY, M.A., late Senior English Master, Middlesbrough High School. 2s.

"An English Grammar embodying in general the recommendations of the Joint Committee on Grammatical Terminology. The author has kept in view the real aim of grammar, namely, 'the production of good English.'"—*Athenaeum.*

**ENGLISH COMPOSITION, JUNIOR.** By E. W. EDMONDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 2s.

"This excellent manual makes plain for the young pupil the essentials of good writing. A distinctly workmanlike production that can be heartily recommended as one of the best of its kind."—*Education.*

**ENGLISH GRAMMAR, JUNIOR.** With Parsing and Analysis. By A. M. WALMSLEY, M.A. *Second Edition.* 2s.

"The work of a practical teacher who knows the value of compromise between the old and the new methods."—*Journal of the Assistant Masters' Association.*

**SPELLING AND PUNCTUATION (with Pieces for Dictation).** By HARRY SHOONMITH, M.A., Modern Language Master, Wandsworth Technical Institute Secondary School. *Second Edition.* 1s.

"An excellent little book outside and in."—*Literary World.*  
"Very seldom have we seen any book which deals so thoroughly with the difficult subject of teaching and learning to spell."—*Educational News.*

**FRENCH COURSE, PRELIMINARY.** By H. J. CHAYTOR, M.A., and H. E. TRULOVE, B.A. *Second Edition.* 2s.

"An excellent first year's work, well arranged on systematic lines, with due regard to the advantages of the Direct Method, and also to the necessity for thoroughness in the acquisition of the language."—*Athenaeum.*

**FRENCH COURSE, NEW JUNIOR.** By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. 3s. 6d.

"The book becomes a serious rival to those existing."—*Schoolmaster.*

**FRENCH READER, NEW JUNIOR.** By J. P. R. MARICHAL, L. es L., and L. J. GARDINER, M.A. 2s. 9d.

"Consists of well-chosen literary extracts in French."—*Education.*

**GEOGRAPHY, PRELIMINARY.** By E. G. HODGKISON, B.A. 2s.

"An admirable textbook, clear, direct, and well suited to the needs of pupil for whom it is intended."—*Literary World.*

**GEOGRAPHY, JUNIOR.** Including Outlines of Physical Geography. By G. C. FRY, M.Sc. 3s. 6d.

"The matter is well arranged, the maps and diagrams are good, and the questions at the end of each chapter render the book a thoroughly practical aid."—*Schoolmaster.*

**HISTORY OF ENGLAND, PRELIMINARY.** By M. K. ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, M.A. With illustrations, 2s. 9d.

"In addition to an outline of political events it tries to give some idea of social and constitutional development, and also to connect history with geography. It is clearly written and well illustrated."—*School World.*

**HISTORY OF ENGLAND, SCHOOL.** By M. E. CARTER, Honour School of Modern History, Oxford. 4s. 6d.

Also in three parts as follows:—I, to 1603; II, 1485-1714; III, 1660-1910. 2s. each.

"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian.*  
"Very careful judgment has been exercised in the selection of the matter, and a proper perspective maintained."—*Educational Times.*

**NEW JUNIOR LATIN COURSE.** By J. V. THOMPSON, M.A., and LL. M. PENN, M.A. 4s. 6d.

"A very successful compromise between the old and the new methods—a combination of what is best in both."—*Journal of the Assistant Masters' Association.*

**NORMAL  
CORRESPONDENCE COLLEGE.**

THE EFFICIENT AND SUCCESSFUL CORRESPONDENCE COLLEGE.  
(FOUNDED 1889.)

**RESULTS OF THE LATEST**

**A.C.P. and L.C.P.**

In all parts of the Kingdom Pupils of the Normal have passed A.C.P. & L.C.P.

**Some Typical Testimonials.**

8 Alfearn Road,  
Lower Clapton, N.E.  
April 16th, 1918.  
Dear Sirs,  
I am sure you will be pleased to hear that I have been successful in my A.C.P. Examination, with Honours in five subjects (English, Geography, History, Arithmetic, and Algebra).  
My success is due largely to your excellent tuition, and I do so wish I could sufficiently express my thanks to you.  
To anyone needing help I shall take great pleasure in recommending the Normal Correspondence College.  
Very faithfully yours,  
RICHARD J. M. LEWIN.  
(Honours in 5 subjects.)

Arranmore (2) Nat. School,  
Burtonport.  
February 3rd, 1918.  
Sir,  
I have to inform you that I passed the recent L.C.P. Examination, obtaining Honours (First Place) in Irish.  
Your notes on Education and Astronomy were very good. In the latter subject practically all the questions set had been anticipated and answered in your papers.  
Yours faithfully,  
P. MURRAY.

7 Chambers Lane,  
Willesden Green, N.W.  
January 30th, 1918.  
Dear Sir,  
I am very glad to say I have been successful at the recent A.C.P. Examination. I must thank you very much for the great help your course has been to me, several questions being very similar to those set in your course.  
Again looking forward to your valuable help,  
Yours faithfully,  
JOHN F. BAYLISS.

Bryn Tawel, Cross Park,  
Pembroke Dock.  
February 2nd, 1918.  
Dear Sir,  
I am glad to say that I obtained Four Honours (Geography, Arithmetic, Algebra, and Geometry) at the recent A.C.P. Examination. I wish to thank you for your tuition and the very great interest in my work which gave me my success.  
I am, yours faithfully,  
B. J. CHUBB.  
(Honours in 4 subjects.)

Scugger House,  
Carlisle.  
January 31st, 1918.  
Dear Sir,  
I am happy to tell you that I have received the result of the A.C.P. Examination and find that I have passed and so qualified for the Diploma. I shall be everlastingly thankful to the fates which prompted me to join the Normal and take the Examination.  
I have found your papers very valuable. Yours sincerely,  
MARIA GILL.

6 Osborne Road, Nether Edge,  
Sheffield.  
February 1st, 1918.  
Dear Sir,  
I have passed in the two subjects which I entered for, and so have completed the examination (A.C.P.).  
I have found your notes and questions a great help, and am very pleased I have passed.  
I have to thank you for your valuable tuition, as I found your notes particularly helpful.  
Yours faithfully,  
H. KAT.

# THE COLLEGE OF PRECEPTORS.

## CERTIFICATE AND LOWER FORMS EXAMINATIONS

### MIDSUMMER, 1918.

#### LIST OF SUCCESSFUL CANDIDATES AT THE HOME CENTRES.

The list of successful candidates at the Colonial Centres will be published in the November number of "The Educational Times."

### CERTIFICATE EXAMINATION.

[Throughout the following Lists, bracketing of names implies equality.]

The Prizes will be awarded as soon as the results of the Examination at the Colonial Centres are known. The awards will be communicated by post to the successful candidates, and a list of the awards will appear in the November number of "The Educational Times." The same number of "The Educational Times" will contain extracts from the Reports of the Examiners on the work in the several subjects of the Examination, and a list of the Candidates who obtained the First and Second Places in each Subject on Senior Papers.

### BOYS.

N.B.—The small italic letters denote Distinction in the following subjects respectively:—

<p>a. = Arithmetic.                  ab. = Algebra.                  b. = Botany.                  bk. = Book-keeping.                  ch. = Chemistry.                  d. = Drawing.                  do. = Domestic Economy.</p>	<p>du. = Dutch.                  e. = English.                  f. = French.                  g. = Geography.                  ge. = German.                  gm. = Geometry.                  gr. = Greek.</p>	<p>h. = History.                  he. = Hebrew.                  i. = Irish.                  it. = Italian.                  l. = Latin.                  lo. = Logic.                  lt. = Light and Heat.</p>	<p>m. = Mechanics.                  ma. = Magnetism &amp; Electricity.                  ms. = Mensuration.                  mu. = Music.                  p. = Political Economy.                  ph. = Physiology.                  phys. = Elementary Physics.</p>	<p>s. = Scripture.                  sc. = Elementary Science.                  sh. = Shorthand.                  sp. = Spanish.                  ta. = Tamil.                  t. = Trigonometry.                  w. = Welsh.</p>
--	---	--	---	--

The signs \* and † prefixed to names in the Junior and Preliminary Lists denote that the Candidates were entered for the Senior and Junior Grades respectively.

In the addresses, Acad. = Academy, C. or Coll. = College, Coll.S. = Collegiate School, Comm. = Commercial, Conv. = Convent, Elem. = Elementary, End. = Endowed, Found. = Foundation, H. = House, Hr. = Higher, Inst. = Institute, Int. = International, Inter. = Intermediate, Poly. = Polytechnic, Prep. = Preparatory, P.T. = Pupil-Teachers, S. = School, Sec. = Secondary, Tech. = Technical, Univ. = University.

**HARRAP'S LATEST PUBLICATIONS**

**AN INTRODUCTION TO THE HISTORY OF SCIENCE**  
 By Dr. WALTER LIBBY, M.A. With Eight Illustrations. 304 pages. Size 7½ by 5 in. 5s. net.

**HARRAP'S INTRODUCTORY ALGEBRA**  
 By WILLIAM FARQUHARSON, M.A., Daniel Stewart's College, Edinburgh. Crown 8vo, 180 pages, with Answers, 2s. net. Also without Answers, 1s. 9d. net.

*From the Principal of a Preparatory School:—"Farquharson's Algebra is first-rate, and I shall put an order through in due course. I hope the book will have the success it deserves, for of the large number of elementary Algebras I have perused in my search for something suitable for beginners, this is the only one that appears to have realized and provided for the extraordinary difficulty of the subject for small boys."*

**THE SCIENTIFIC STUDY AND TEACHING OF LANGUAGES**

By HAROLD E. PALMER, Phonetic Department, University College, London. Large 8vo, about 336 pages, with Diagrams, &c. 10s. 6d. net.  
 An important book designed as a plea for systematic methods of language study and teaching on a rational and perfectly organized basis, as opposed to empirical and unsystematic methods based on insufficient or faulty data.

**FRENCH PLAYS FOR CHILDREN**  
 By JOSETTE E. SPINK. With Illustrations and Vocabulary. Small crown 8vo, 96 pages, 1s. 6d. net.

This little book is designed primarily as a reader for class use.

**DEUTSCHE ANEKDOTEN**  
 By H. STROEBE. With Vocabulary. 48 pages, sewed, 1s. net.

**HARRAP'S PRACTICAL RUSSIAN GRAMMAR** (In Press.)  
 By R. T. CURRALL, M.A., George Watson's College, Edinburgh. Part I. With Phonetic Transcripts, Exercises in the Russian Handwritings, and Vocabulary. 272 pages. Crown 8vo, 6s. net. Part II is in active preparation.

**A RUSSIAN PRONOUNCING VOCABULARY**  
 With an Introduction on Russian Pronunciation. By R. T. CURRALL, M.A., George Watson's College. Size 5¼ by 3 in. 128 pages, limp cloth, 1s. net.  
 This book contains classified lists of more than 2,000 Russian words, with phonetic pronunciation of each and its English equivalent.

**OLD FRENCH NURSERY SONGS**  
 Arranged and Illustrated by ANNE ANDERSON. Accompaniment printed boldly for use at the Piano. With Eight Colour Plates and many Line Drawings and Decorations. Size 11¼ by 8¼ in. Picture Jacket, 6s. net.  
 This collection comprises some thirty charming French Songs.  
 Extract from *Music*:—"The melodies are simple and beautiful in true French manner, the pictures are dainty both as to drawing and colour."

**A FIRST SPANISH COURSE**  
 By Profs. E. C. HILLS and J. D. M. FORD. With Phonetics, Exercises, and Vocabulary. Crown 8vo. 340 pages, 4s. net. Key for Teachers only, 5s. 3d. net.  
 This easier course is designed for much younger pupils than the Authors' previous work.

**LA VIDA DE VASCO NUÑEZ DE BALBOA**  
 By M. J. QUINTANA. Edited, with Introduction, Notes, and Vocabulary, by E. A. WOOLF, D.Litt. Small crown 8vo, 116 pages, 1s. 6d. net.  
 A "one term" Reader, the text amounting to 64 pages.

**CAPÍTULOS ESCOGIDOS DE V. BLASCO IBÁÑEZ**  
 With Notes and full Vocabulary, by ALEC E. WOOLF, M.A. Crown 8vo, 192 pages, 2s. net.  
 Selections—each one complete in itself—from the works of the foremost novelist of the present day, whose works have been translated into every European language.

N.B.—New Descriptive Lists of Books in French and Spanish will be sent on application.

**THE MEASUREMENT OF INTELLIGENCE**  
 By Dr. TERMAN, with Introduction by Prof. J. J. FINDLAY, University of Manchester.

An important new book on Experimental Psychology and its latest application in schools and public institutions; provides for the first time a complete set of the Binet-Simon tests in the revised form in which they are used to-day.  
 These tests are explained and discussed in detail and supplemented by a set of cards reproducing in facsimile and appraising the actual performance of the subjects tested. (In the Press.)

## LECTURES FOR TEACHERS

Forty-sixth Annual Series: Second Course.

### CURRENT CHANGES IN EDUCATION

By JOHN ADAMS, M.A., B.Sc., LL.D., F.C.P.,

Professor of Education in the University of London.

The Course will begin on Thursday, October 3rd, at 6 p.m.

Whether we like it or not, we are faced with certain important changes in educational theory and practice that must seriously affect the life and work of professional teachers. It is the purpose of this course to indicate these changes, to explore their effects and to suggest means of meeting the demands they will make on those whose duty it is to carry on the education of the country. However drastic the coming changes, the present system will not be entirely swept away. It will, therefore, be the business of the lecturer to correlate what is with what is to be, and to illustrate the changes in English education by what is going on in the schools of other countries where similar developments are taking place under somewhat different conditions. He will make a point of keeping the lectures in as close touch as possible with the practical and the practicable.

#### SYLLABUS.

I. (Oct. 3.) *The Limits of Possible Change.*—Implications of "transition time," "parting of the ways" and similar phrases: the Heraclitean flux; stability underlying the flux: determining influence of the past: the possibilities of educational evolution: changes from within the profession and from without: real changes and apparent changes: dangers of love of change as such: present restlessness of the profession: its causes and probable consequences: the limitations and responsibilities of the individual teacher.

II. (Oct. 10.) *Changes in Organization.*—Rearrangement of responsibilities between Heads of schools and school governors: recognition of the school as an organism: corresponding need for organization to be determined from within: loosening of tradition: diminishing importance of curriculum in determining organization: the staff hierarchy: form-master *versus* specialist: increasing complexity of the interaction of sides, sets, houses and other units of organization: the striving after simplicity.

III. (Oct. 17.) *School Buildings.*—Evolution of our present school architecture, elementary and secondary: the psychology of the corridor and the glass door: hall and classroom: Wirt's revolt against "a seat and a desk for each pupil": limitation of classroom accommodation: correlation between teaching and school structure: peripatetic teaching: over-emphasis on stone and lime: teacher's power of manipulating school space: tendency towards less permanent school buildings: changing views about school sites.

IV. (Oct. 24.) *The New Discipline.*—Various meanings of the term *discipline*: discriminated from *organization*: undue emphasis on one aspect of discipline: basis of teacher's authority: nature of power of control: the "discipline master": so-called "free" discipline: the Montessori ideal: the Prussian: discipline evolved among the pupils themselves: self-government: relation to prefect system and to honour system: the new discipline combines the ideals of control and training.

V. (Oct. 31.) *Changed Social Function of the School.*—School ceasing to be an institution apart: it is gradually being assimilated as part of the general social system: school as social centre: civic correlation in Gary system: increasing use of school buildings for general social purposes: implications of the nursery schools and the "motherly person": extension of corporate spirit to the elementary schools: development of the "common school" ideal, and the results that must necessarily follow.

VI. (Nov. 7.) *The New Views on Play in Education.*—In some ways a reversion to an older type of education: two directions (a) towards systematized play in schools, (b) towards a lighter way of dealing with school subjects, as in Mr. Caldwell Cook's *The Play Way*: in organized games play becomes work: play is no longer a subsidiary matter: contrast between public schools and others: playgrounds contrasted with playing fields: controversy about teaching play: place of play in the school curriculum: function of the play-master.

VII. (Nov. 14.) *Changes in Curriculum.*—Nothing specially new in fact of change here: curriculum always in a state of flux: origin and development of current curriculum: the principle of balance: "knife and fork studies": cultural studies: the immanence of Formal Training: the present revolt against "bookishness": danger of too strong recoil: the boy-scout ideal: the vocational ideal: claims of the modern social reformer: the curriculum as a datum in the teacher's problem: his freedom within the limits set by the educational authority.

VIII. (Nov. 21.) *Changes in Methods of Instruction.*—New view of the nature of instruction: information-mongers: standardizing of methods: pure didactics going out of favour: growing preference for the various dialectic methods: strange recrudescence of lecturing in the teaching of certain school subjects: increased recognition of the pupil's point of view: paidocentricism does not imply neglect of subject-matter, but a demand for proper correlation: new methods marked by a recognition of the organic unit of knowledge.

IX. (Nov. 28.) *Changes in the Use of Textbooks.*—Origin of textbooks: at first purely logical, taking no account of reader's special needs: textbook held teacher in bondage: revolt against book as supreme authority: its function as an adjunct to teaching: relation of pupil's class-notes to the textbook: pupil as textbook maker: attempts at standardizing textbooks by associations of teachers: need for various types to meet different cases: anomalous position of private publishers dominating the production of textbooks.

X. (Dec. 5.) *Changes in Class Manipulation.*—Class hitherto always taken for granted: economic justification for teaching by classes: class always of the nature of a compromise: the "death knell of class teaching": positive advantages of class teaching: distinction between a class as a teaching unit and as an organization unit: modern tendency to emphasize the organization aspect: resulting compromise of combining the two aspects, with an increasing bias towards private coaching of individuals organized into suitable groups.

XI. (Dec. 12.) *Changes in Examination and Inspection.*—Origin and development of school examinations: double test (a) of pupils, (b) of teachers: police aspect of examination and inspection: examinations are being supplanted by inspection: examinations used for two tests (a) for attainments, (b) for capacity: increased demand for tests of intelligence: development of the practical and oral examination: co-ordination of examination results with the school record: demand for the training of examiners and inspectors.

XII. (Dec. 19.) *The New Teacher.*—Types of teacher must change with the new developments: two conflicting movements (a) towards more definite professionalism, (b) towards the ideal of social service: increasing solidarity of the teaching craft: effects of increased complexity of professional training: the development of *arcana*: the "direct teacher" and the educational middle-man: the type of personality the public will insist upon having in its teachers: inevitable rise in social status: place of the "great" teacher in the immediate future.

#### FEES FOR ADMISSION.

Half-a-guinea for the whole Course. Two shillings for a single Lecture.

\*. Members of the College have free admission to the Course.

Offices: 12 & 13 Henrietta Street, Covent Garden, London, W.C.2.

Telegraphic Address:—

Scholasque, Westminster, London."

Telephone:—7021 Gerrard.

**Scholastic.**

Head Masters and Principals of Public and Private Schools desirous of engaging qualified and well recommended English or Foreign Resident, Non-resident, or Visiting Assistant Masters, can have eligible Candidates introduced to them (free of charge) by stating their requirements to Messrs. GRIFFITHS, POWELL & SMITH.

A List of Vacancies will be forwarded on application to Graduates and other well qualified Assistant Masters seeking appointments for next term.

Schools Transferred and Valued. Partnerships arranged. No charge unless sale effected. List of Boys' and of Girls' Schools and School Partnerships for Sale, sent Gratis to intending Purchasers, TO WHOM NO COMMISSION IS CHARGED.

**Assistant Mistresses.**

Head Mistresses and Principals of Public and Private Schools requiring English or Foreign Assistant Mistresses can, on application to Messrs. GRIFFITHS, POWELL & SMITH, have suitable Candidates placed in immediate communication with them free of charge.

A List of Vacancies will be forwarded to English and Foreign Assistant Mistresses and other Teachers on application. Liberal Salaries.

THE COLLEGE OF PRECEPTORS

Incorporated by Royal Charter

BLOOMSBURY SQUARE, LONDON, W.C.1

Membership of the College is open to Teachers and to others engaged in Education.

The privileges of membership include free admission to Lectures and Meetings; the use of the Members' Room and of a large Library of educational and other books; reduction of fees payable in the case of appointments obtained through the Joint Agencies; &c. Copies of "The Educational Times" and of the College Calendar are sent to every Member.

Full particulars may be obtained from the Secretary of the College.

Members who hold Diplomas of the College pay a lower subscription than others.

**University Tutorial College.**

LONDON.

**CHRISTMAS VACATION CLASSES.**

**JANUARY MATRICULATION.**

A Recapitulation Class for the January Matriculation commences Thursday, December 19th, and extends to date of Examination.

Annually for the last twenty-five years about 100 Students of the University Tutorial College have passed London Matriculation.

**LABORATORY WORK IN PRACTICAL SCIENCE.**

Practical Classes in Chemistry, Physics, and Botany commence Thursday, December 19th, and extend over a period of three weeks.

**PRIVATE TUITION.**

Private tuition may be taken up at any time either during Term or in the ordinary School Vacations, in all subjects for London University and other Examinations, or for Independent Study.

Full particulars may be had from

THE PRINCIPAL,  
UNIVERSITY TUTORIAL COLLEGE,  
RED LION SQUARE, HOLBORN, W.C.1.

**NORMAL**

NORMAL CORR. COLLEGE

(FOUNDED 1839.)

**EXAMINATIONS FOR WHICH THE NORMAL PREPARES.**

(Trinity College, Cambridge).

Telegrams—"TUORESS, PHONE, LONDON."

Telephone—Museum 1136.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

**A.—EMPLOYMENT DEPARTMENT.**

**(i) ASSISTANT MASTERS & TUTORS.**

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

**(ii) ASSISTANT MISTRESSES.**

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

**(iii) LADY MATRONS AND HOUSE-KEEPERS.**

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSE-KEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

**B.—SCHOOL TRANSFER DEPARTMENT.**

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers.

All communications and inquiries are treated in the strictest confidence.

**C.—PUPILS' DEPARTMENT.**

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

## RECENT EDUCATIONAL PUBLICATIONS

### Translation from French. By R. L. G.

RITCHIE, M.A., and JAMES M. MOORE, M.A. Demy 8vo. 6s 6d net

"A book which is clear, helpful, and a pleasure to read and work through. We say, 'work through,' because the most valuable part is certainly that section which consists of models, or specimens of how fine translation should be carried out. It is in these passages, so carefully and delicately handled, that the science and art of the authors is most evident. . . . This, in short, is a very good book, and it should be bought."—*The Times*

### A Manual of French Composition. By

the same Authors. Demy 8vo. 5s net

"The outstanding feature . . . is the Model Lessons. . . . These are of high merit, and deserve the closest attention. . . . The work is highly stimulating, and shows how the study of a modern language may give that mental discipline which was formerly supposed to be the province of the ancient classics."—*Modern Language Teaching*

### A Short Italian Dictionary. By ALFRED

HOARE, M.A. Vol. I, Italian-English. Demy 8vo. 9s net

The need for an Italian-English dictionary brought up to date and obtainable at a moderate price has long been felt. It is hoped that the work now presented, together with the companion volume shortly to be issued, may satisfy the reasonable requirements of a student. The first volume is an abridgment of the author's quarto dictionary published in 1915, and the second an expansion of the English-Italian vocabulary appended thereto.

## The Educational Times.

Until further notice, "The Educational Times" will be issued four times a year—on the 15th of January, April, July, and October. The next issue will appear on January 15th, 1919.

### Important—Change of Address.

Communications intended for the Editor should be addressed to "The Editor, 'Educational Times,' 31 Museum Street, London, W.C.1."

### THE PENSIONS BILL.

THE President of the Board of Education has introduced the School Teachers (Superannuation) Bill, which has passed its second reading and is now under discussion in a Committee of the whole House of Commons. The measure bears a title which is misleading. It ought properly to be entitled "The State School Teachers (Superannuation) Bill," since it excludes from benefit all teachers in schools which are not under direct State control. It is true that service in a school not grant-aided may be regarded as recognized service for the purpose of superannuation, but even this applies only where the school has since become grant-aided or becomes grant-aided within five years after the beginning of the operation of the Act. It is also true that service up to ten years in any school may be recognized, provided that the school is not "conducted for private profit." Thus the whole body of teachers in private schools is placed outside the scope of the Bill, and, while its proposals are admittedly generous and timely in regard to those whom they are designed to benefit, their effect upon private enterprise in education is likely to be little short of disastrous.

He would be indeed a sanguine prophet who should

declare that qualified and efficient teachers will be found in large numbers willing to forgo the prospect of a pension, coupled with the risk of a smaller salary, for the sake of working in schools which are free from State control. It is far more likely that private schools will find it extremely difficult to obtain qualified teachers. Few will risk their capital on the establishment of new private schools or on the continuance of old ones. Assuredly there will be little prospect of profit, "private" or otherwise, in any educational enterprise which is outside the circle of Whitehall's radiant benevolence. Probably Whitehall itself and some of the politicians who are its nominal masters will be well content to see the decay and ultimate extinction of all schools "conducted for private profit." These words in the Pensions Bill have the kind of ungenerous flavour with which Whitehall is accustomed to speak of schools which are not under its control. They indicate a temper of mind which is most unfortunate in its results on educational progress—an unconscious "Junkerism," so to speak, which makes one wonder whether we can claim to have escaped the infection of that evil which we have been fighting these four years past.

Plausibly enough, the Board of Education would say that they cannot possibly take cognizance of schools of which they know nothing officially; that the justification for State pensions must be found in service given in State schools; that many of the private schools are inefficient; and that the whole tendency of modern times is in the direction of a completely national system of education. To this it may be answered that the Board should proceed to take cognizance of all schools, whether private or State-aided; that they should deal promptly and faithfully with those that are found to be inefficient; that they should try to grasp the elementary principle that good education is an enterprise of the spirit rather than an affair of buildings and official machinery. It is within the power of the Board to give us a truly national system of education, expressing the spirit and aspirations of a free country, and devoid of all the harmful restrictions of bureaucratic control. The Board are anxious

to claim that they have no desire whatever to interfere with the freedom of the schools, and the implied suggestion is that the conditions of their task lead inevitably to such developments as are foreshadowed in the Education Act, the Pensions Bill, and the proceedings of the Secondary School Examinations Council. We are asked to picture the Board as devout believers in educational liberty, driven by sheer force of circumstance to impose restrictions upon teachers and pupils, to make detailed stipulations as to buildings and equipment, and to enforce their decrees by monetary penalties. It is a harrowing vision, but it rests on nothing more substantial than administrative convenience.

Hitherto the Board have found it convenient to act on the assumption that the school is the true unit of educational administration. Grants have been paid to schools; teachers have been regarded, not as individuals but as members of school staffs; the individual pupil has been disregarded; and the average attendance at the school has been the basis of grant payment. Schools, not teachers, have been officially "recognized," and it is only recently that there has been any suggestion of taking a Local Education Authority's gross expenditure into account for grant purposes. Instead of this plan of treating the school as the unit a better method would be to pay grants to parents in respect of individual children, leaving the parents free to choose schools to their liking, provided always that the State authorities were satisfied as to the school's efficiency. Similarly, pensions should be given to all qualified teachers who have worked for the prescribed period in schools thus found to be efficient, whether they are grant-aided schools or not. Education is meant for the individual child and the pension is intended for the individual teacher. Our method of administration should therefore centre round the child and the teacher. It is true that a somewhat more detailed scheme of administration would be called for, but the Government find it possible to deal with tax-payers as individuals. Why, then, should they not deal with the recipients of education grants in the same manner? Until some such plan is adopted State-aided schools will be disliked by the class of rate-payer who does not use them for his own children and resents having to pay for their maintenance, because, as he puts it, he has to pay for the education of other people's children as well as of his own. To many people the Council School is a kind of educational soup kitchen, to be used only by the poor. Yet the State's concern for education should extend to all children, rich or poor, and this is possible only when the administration of education is altered so as to provide for the proper schooling of every child and the proper payment and superannuation of every teacher, subject only to the necessary condition that the child shall be educated, and the teacher shall teach, in a school which is efficient.

## NOTES.

FOR over sixty years *The Educational Times* has been the official journal of the College of Preceptors, owned by that body and published under its auspices.

*Concerning Ourself.* The Council of the College has now decided to relieve itself of the responsibility of publication, but the journal will be continued and it will still be sent to members of the College free of cost. *The Educational Times* has a long and honourable record as an advocate of education on progressive lines. Especially has it urged the claims of freedom in the schools and the importance of adjusting the gradually increasing State control of education to the essential conditions under which alone real education is possible. It is fitting that education should come within the orbit of State activities, since the welfare of the young citizen is a matter of national concern. But this admission does not involve a willingness to see teachers and schools placed under detailed official control. This journal has always maintained that our educational system should reflect the national passion for freedom and individuality.

*Our Future.* THIS established policy of *The Educational Times* will be maintained, as will also its outward form. For the present, also, the three months' interval between succeeding issues will continue. As the journal is no longer to be the organ of a particular body, the management will be free to consider only the needs of education. The help of a strong body of contributors has been obtained, and it is proposed to provide in each issue a survey of contemporary educational work and development. In addition to editorial articles and paragraphs on matters of current interest, our pages will contain articles on educational and social matters, written by men and women of authority in their several fields. A chronicle of events will be given in each number, together with a Blue Book Summary embodying the gist of official publications on education. Special attention will be devoted to the reviews of new books, and an effort will be made to help teachers in the choice of textbooks for their schools. Other special features will be introduced, with the object of providing an educational newspaper and review which shall be at once indispensable and readable.

*Extended Education.* THE Education Bill has become an Act of Parliament, and Mr. Fisher has received many well earned congratulations on his success in piloting the measure through Parliament. Its chief merits will be found to lie in the extension of educational supervision upwards and downwards—upwards in the compulsory continuation schools and downwards in the State-

aided nursery schools. In future a far greater number of children than hitherto will be brought under physical and mental guidance. With this wider scope of duty the State, acting through the educational administration, will find itself confronted with many new and complex problems. The practice of even our best State infant schools will hardly prove adequate to the needs of the new nursery school. Still less will the young wage-earner be content with the kind of teaching which, more than anything else, has repelled him from the voluntary evening schools. If the Education Act is to be the great civilizing force which is sought, we must throw overboard many of the traditions of the public elementary school. These traditions have been born of circumstances, and are inseparable from large classes, inadequate buildings and staff, small paved playgrounds, and the general suggestion that a school is a place of forced labour. We need a new spirit in national education, and we shall not develop it until we have learned to apply Bacon's maxim that "studies serve for delight"—as well as "for ornament and for ability."

ONE result of the Pensions scheme, should it be carried through, will be to stimulate the flow of recruits to teaching work, thus helping to solve one of the most difficult administrative problems. Many of the most useful suggestions for educational improvement during the past ten years, and many of the provisions of the new Education Act itself, are abortive in the absence of efficient teachers to carry them out. It may be that Mr. Fisher has paved the way to overcoming the difficulty. The Reports of the Departmental Committees on Salaries are evidently to be used as a means for bringing Local Authorities into line. The offer of extra grants and the undertaking to pay one-half of the cost of approved local schemes of education will go far to allay the fears of the rate-payers. Finally, the offer of a reasonably adequate retiring allowance to the teachers will tend to bring new recruits and will certainly operate to prevent migration to other callings. These results will not follow immediately, and, since it is urgently necessary to get the Act to work without delay, it is to be hoped that we shall not wait until we have ideal buildings and a force of fully qualified teachers before making a start. The nursery schools and continuation schools can begin in many towns without much delay, and there are great advantages in starting gradually.

THE Council of the College of Preceptors has undertaken to distribute among schools the conchological collection of the late Bishop Mitchinson. The collection comprises British land and fresh-water shells, semi-fossil coral shells from the island of Barbados, a few West Indian

(Lesser Antilles) land shells, and marine mollusca, tropical and temperate. The collection will be on view at the College of Preceptors, Bloomsbury Square, London, W.C., from the 6th to the 10th of January. Applications for specimens should be made to the Secretary not later than January 13. Specimens will then be allotted to schools in accordance with Bishop Mitchinson's wishes. Preference is to be given to schools which will use the specimens, to small schools rather than large ones, and to schools which have maintained their independence.

THE Treasurer of this Fund has now received over £7,000 in contributions. A systematic collection is going forward in the schools, and, although good progress is being made, the responsibilities of the Trustees grow even more rapidly. It is hardly necessary to urge the claims of the Fund upon the goodwill of those of us who have been kept here in safety while our colleagues were facing the perils of the war. It need not be pointed out that the beneficiaries of the Fund have a special title to our consideration, since they are mainly drawn from the wives and families of young men who had been teaching for a comparatively short time and who had, therefore, little opportunity to make adequate provision for those whom they left behind. Contributions should be sent to the Honorary Treasurer of the Fund, Mr. J. Hart-Smith, c/o The London Provincial and South Western Bank, Ltd., 835 Wandsworth Road, S.W.8, London.

THE following publications are priced net—i.e. exclusive of postage—and may be obtained from H.M. Stationery Office, Kingsway, London, W.C.2, or from 37 Peter Street, Manchester; 1 St. Andrew's Crescent, Cardiff; 23 Forth Street, Edinburgh; or from E. Ponsonby, Ltd., 116 Grafton Street, Dublin:—

## THE SCHOOL TEACHERS SUPERANNUATION BILL.

The main heads of the Pensions Bill, as described by Mr. Fisher, are as follows:—

1. It will bring within one comprehensive system of State pensions, on a non-contributory basis, the Certificated Teachers, the Uncertificated Teachers, and the Teachers of Special Subjects in Elementary Schools, and the teachers in all other schools aided by the Board of Education, including those Training Colleges which are not Departments of Universities.

2. The benefits will consist of annuities, together with lump sums, for those who retire at the age of sixty, or later, after thirty years of service, and for those who retire disabled after ten years' service; and of gratuities payable on the death of a teacher in service after five years of service.

3. These benefits will be calculated on principles closely resembling those of the pension system in force for Civil Servants under the Superannuation Act, 1909. They will be based on the average salary which the teacher receives during the last five years of his service; the annuities being reckoned at one-eightieth of such average salary for each year of service, and the lump sums at one-thirtieth for each year of service.

4. No difference will be made between the sexes in the conditions of pension or the mode of calculating it, except that in order to provide for women teachers leaving the profession to be married, and subsequently returning to it, provision is made for the substitution of twenty years' service for thirty as a condition of pension in such cases.

5. Pensionable service will cease at the age of sixty-five, except with the special approval of the Board of Education.

6. Existing certified teachers will have the option of remaining under the existing Superannuation Acts if they desire to do so; with this exception the system set up by those Acts will be extinguished. Pensions already granted under those Acts will remain unaltered. The prospective deferred annuities which have been purchased by existing teachers' own contributions will be secured to them, and will be payable to them at the age of sixty-five in addition to the benefits receivable by them under the Bill.

7. Local pension schemes will cease to apply to the teachers who come under the Bill. Existing teachers under local pension schemes will have an option to remain under those schemes, instead of coming under the Bill. Provision is made for enabling teachers who have contributed to existing pension schemes and who desire to come under the Bill to receive from the local pension scheme, in addition to the benefits obtainable by them under the Bill, payment in respect of their past contributions.

8. Service in order to be pensionable must be full-time service in schools which are grant-aided at the time of the service, or in secondary schools, &c., which, though not grant-aided at the time, are grant-aided at the commencement of the Bill, become grant-aided within five years after that date; and power is reserved to the Board, subject to prescribed conditions, to reckon as pensionable service a limited amount of service (not exceeding ten years) in other schools (not conducted for private profit) rendered before the commencement of the Bill.

9. Power is taken to approve service outside aided schools as "qualifying" service though not pensionable, thus enabling teachers who serve partly in aided schools and partly in unaided schools to count a period of service in unaided schools towards making up the thirty years of service necessary for enabling them to obtain pensions in respect of their service in aided schools.

10. Other matters dealt with in the Bill include:—

- (a) Medical examination for future teachers before admission to recognized service.
- (b) Disqualification of existing teachers who are in impaired health, or are aged sixty or over, from death gratuity in respect of death during service.

- (c) Restrictions as to the aggregate pension and salary of pensioners who are re-employed.
- (d) A provision enabling existing certificated teachers who are subject to the Superannuation Acts to receive the benefits of this Bill after less than thirty years' service if their service is of the length which would have satisfied the existing Superannuation Acts.
- (e) Repeal of the existing provisions of the existing Teachers Superannuation Acts as to pecuniary need being a condition of disablement allowance.
- (f) Power to withhold or reduce benefits in case of misconduct.
- (g) The application of the Bill to reformatory and industrial schools.
- (h) Special provisions as to the elementary schools known as "certified efficient schools."
- (i) Provision for the extension of the Bill to the Isle of Man and any of the Channel Islands.

11. Subject to the reservation of certain matters for the decision of the Treasury, the general administration of the Bill will rest with the Board of Education, who are empowered, subject to the consent of the Treasury, to make rules and determine questions arising under the Bill.

The above summary preceded the Bill which was introduced in the House of Commons by the President of the Board of Education. In Committee the measure received some amendment, chiefly in the direction of defining more closely the class of beneficiaries. Attempts were made to secure the inclusion of teachers in private schools, but these were unsuccessful, and on November 4 Mr. Fisher carried an official amendment excluding all service in (a) schools conducted for private profit, (b) schools not open to inspection by the Board of Education and not shown to the satisfaction of the Board to be efficient, (c) schools able out of their own resources to maintain a satisfactory pensions scheme, and (d) schools which do not satisfy such other conditions as may be prescribed as necessary or desirable for securing the public interest.

It will be seen that private-school teachers are thus definitely excluded from the scheme, even although their schools may be recognized as efficient by the Board of Education.

## THE TEACHING OF ASTRONOMY IN SCHOOLS.\*

THE present is a very suitable time to bring forward reasons for the teaching of astronomy. Education is being improved and extended, and happily not on the lines designed simply to turn out more skillful workmen. Each individual is rightly regarded as an end in himself or herself, and not a mere unit in an economic machine or a fibre in a social organism. Education should make life more interesting and attractive for each person, as well as make him or her a better and more useful member of the commonwealth.

From this standpoint the claims of astronomy are easily urged. It is a thousand pities that so many should go through life without ever giving a thought to the sun, moon, and stars shining upon them. Owing to our life in towns, astronomy enters less and less into our daily lives. It is seldom necessary to find our way by the stars, and so we have grown unfamiliar with the Pole Star or the constellations. Artificial illumination does away with the necessity of using moonlight, and so we hardly know that the moon waxes and wanes. Our clocks and watches give us the time, and we lose familiarity with the diurnal movement of the heavenly bodies. It seems extraordinary apathy in the human mind that it should not want to know something about the sun, moon, and stars. They are noticed occasionally, and then taken for granted. It is not realized how much may be learned by merely watching their movements regularly and attentively.

The great educational value of the study of astronomy is

\* Abstract of an address by Sir F. W. Dyson, the Astronomer Royal, to the British Astronomical Association. October 30, 1918.

that it uses these everyday phenomena for training the powers of observation, reasoning, and imagination. With enthusiasm on the part of the teacher, and no doubt much reiteration, children may be taught to see for themselves that the earth is a large round ball, which rotates round its axis in a day and revolves round the sun in a year, with the concomitants of changing seasons and constellations.

The teaching of astronomy should naturally accompany that of geography. A good deal of attention should be given to finding north and south, east and west. The position of the sun at noon and the fixed position of the Pole Star are natural starting points. The diurnal movement of sun and stars follows, and some knowledge of the brighter stars and more prominent constellations should be encouraged.

One or two suggestions I make with diffidence. Is it not possible to erect a sun-dial in a corner of the playground? A post six or eight feet long directed to the pole, with the dial marked on the ground, would serve to show both the daily movement of the sun and its different positions in summer and winter.

Ought not the use of globes to be reintroduced? Is it possible to teach geography without a globe? A Mercator's projection is difficult for a boy or girl to understand, and is bound to lead to misconception. A globe is almost a necessity for the explanation of latitude and longitude and time-reckoning. I should like to see both a terrestrial and a celestial globe, the latter without drawings of Ursa Major, Leo, &c., but with a few night stars and the principal constellations clearly shown. It should have hourly meridians and parallels marked, and particularly the ecliptic with the position of the sun for, say, the first day of each month. With its aid, accompanied by observations of the sun and stars themselves, the phenomena of the diurnal and annual movements of the sun and their consequences can be impressed. In addition a simple orrery, to make clear the transference from the geocentric to the heliocentric standpoint, should be added to the equipment.

There is still another instrument which should be provided—a three- or four-inch telescope. The discoveries of the size and shape of the earth, its rotation and revolution round the sun, were made without the aid of the telescope. But the Copernican system was merely a doctrine of learned people, an explanation of the movement of bright points in the sky, till the powers of the vision of astronomers were augmented by the telescope, which revealed first the solar system and then that of the stars. Galileo's observations of the moons of Jupiter, the phases of Venus, the movement of sun spots should be repeated and explained. There can be no doubt about the appeal such a course of instruction will make to boys and girls and the training it will be to their imaginative and reasoning powers.

It is improbable that much time can be allowed to astronomy as a separate subject, but, were the sympathy and interest of the teacher enlisted, a certain amount of astronomical information could be given in lessons on arithmetic, elementary geography, and trigonometry.

Data like the size of the earth, distance of the sun, velocity of light, might be introduced into arithmetical exercises.

Instructive examples, involving angular diameters, parallax, &c., will suggest themselves as giving a little astronomy as well as more definite ideas of angular measurement.

The teaching of astronomy to the extent I have indicated could be carried out in public schools, secondary schools, and to some extent in preparatory and elementary schools if teachers appreciated its value. In all Universities and colleges those who are intending to take up the profession of teaching, particularly on the science side, should have provided for them, and be urged to attend a course on Elementary Astronomy and the History of Astronomy. The history of astronomy is so bound up with the development of geometry, trigonometry, and dynamics, to say nothing of the development of analysis, that such a course would supplement courses in mathematics and physics. A little familiarity with the telescope and the spectroscope, and a knowledge of the outlines of the history of astronomy form a valuable addition to a specialized training in mathematics. I feel sure that teachers who have had a training of this kind will agree as to the educational value of elementary astronomy, and will try to find for it a small place in school curricula.

## THE COLLEGE OF PRECEPTORS.

### HALF-YEARLY GENERAL MEETING.

THE ordinary Half-yearly General meeting of the members of the Corporation was held at the College of Preceptors, Bloomsbury Square, W.C., on Saturday, the 16th of October, Sir Philip Magnus, President of the Council, in the chair.

The Reports of the Council and of the Dean were adopted.

#### REPORT OF THE COUNCIL.

The Council beg leave to lay before the members of the College the following report of their proceedings since the issue of their last Report:—

1. A Course of twelve lectures to Teachers on "Psychology for Teachers" has been delivered by Prof. John Adams, and a course of twelve Lectures on "Changes in Education" began on the 3rd of October.

2. (a) The Midsummer Certificate and Lower Forms Examinations were held on the 24th to the 29th June, and were attended by 3,083 candidates.

The regulations under which candidates who enter for Senior or Junior Certificates are allowed, under certain conditions, to receive certificates of a lower grade, have been abolished. The alteration will come into operation in June, 1919.

The Council have instituted a new scheme for the Oral Examination in Modern Languages of candidates who enter for the Junior and Preliminary grades.

(b) The Professional Preliminary Examination, held on the 3rd to 5th September, was attended by 229 candidates.

3. (a) The Council regret that owing to war conditions it has not been possible to arrange for the College to conduct the Examinations of the Newfoundland Council of Higher Education this year. It is hoped that after the War, or sooner if conditions should permit, the College may again undertake this work.

(b) At the request of the Governors of Sir Robert Hitcham's School, Coggeshall, the Council have conducted an Examination for Secondary School Exhibitions and Junior Technical Exhibitions.

4. Since the issue of the last report fourteen members have been elected, and thirty diploma-holders who were receiving certain privileges without payment have become subscribing members. One has withdrawn from membership. The Council regret to have to report the death of the following members:—The Right Rev. Bishop Mitchinson, F.C.P., Mr. C. W. Croad, Mr. G. F. Hamilton, and Mr. J. W. Sharpe.

5. In view of the present financial position, the Council have thought it advisable to lessen the financial responsibility of the College in respect of *The Educational Times*. They have accordingly transferred the copyright. The Council are glad to be able to report that the present owner of the copyright is in sympathy with the objects for which the College was founded, and fully appreciates the work and position of efficient private schools. Copies of *The Educational Times* will continue to be sent without charge to the members of the College. The College Pass Lists will in future be published separately.

6. In order to meet the greatly increased cost of paper and printing, the Council have been obliged to raise the price of the Reprints of Examination Papers in Series A to 2s. for non-members and 1s. for members. The new prices apply to Reprints issued in 1917 and subsequent years; those for previous years may still be obtained at the old prices.

7. Copies of the College Calendar for 1918-1919 have been sent, without charge, to all life-members and subscribing members.

8. A grant of £10 has been made from the Benevolent Fund.

9. In view of recent and coming developments in education, the Council have appointed a Special Committee to consider and report upon the future policy of the College.

10. (a) Representatives of the Council have taken part in the work of the Teachers Registration Council, the Federal Council of Secondary Schools Associations, the Teachers' Training Committee, the Joint Scholarships Board, the Committee of the Conference of Educational Associations, the League of the Empire, the Secondary Teachers' War Relief Fund Joint Committee, the Joint Scholastic Agency, and the Joint Agency for Women Teachers.

(b) *The Teachers Registration Council: Progress of the Register.*—Up to and including Thursday, the 12th September 1918, the total number of applications for admission to the Register was 22,699. The number of applications received between 1st January and 12th September 1918 is 2,785. The number for the corresponding period of 1917 was 964.

*The New Council.*—The Second Council ended its period of office on June 30th last, and a new Council has been appointed in accordance with the regulations laid down by the Privy Council. It is constituted as follows:—

*University Teachers' Group.*—The Hebdomadal Council of the University of Oxford: The Very Rev. Dr. T. B. Strong. The Council of the Senate of the University of Cambridge: Mr. W. Durnford. The Senate of the University of Durham: Prof. F. B. Jevons. The Senate of the University of London: Sir Gregory T. Foster. The Council of the Victoria University of Manchester: Prof. J. J. Findlay. The Council of the University of Birmingham: Prof. E. de Selincourt. The Council of the University of Liverpool: Prof. E. T. Campagnac. The Council of the University of Leeds: Prof. B. M. Connal. The Council of the University of Sheffield: Prof. J. A. Green. The Council of the University of Bristol: Prof. J. Wertheimer. The University Court of the University of Wales: Principal Sir Harry Reichel.

*Elementary Teachers' Group.*—National Union of Teachers: Mr. W. D. Bentliff, Miss I. Cleghorn, Miss E. R. Conway, Mr. H. Pearson, Mr. G. Sharples, Mr. W. B. Steer, Miss J. F. Wood. National Association of Head Teachers: Miss E. F. L. Goodwin, Mr. J. W. Iliffe. National Federation of Assistant Teachers: Mr. W. T. Kenward, Miss E. Phillips.

*Secondary Teachers' Group.*—Head Masters' Conference: Mr. M. J. Rendall. Head Masters' Association: Sir John McClure. Head Mistresses' Association: Miss F. M. A. Gadesden, Miss E. R. Gwatkin. Assistant Masters' Association: Mr. A. A. Somerville. Assistant Mistresses' Association: Miss E. S. Lees. Association of Preparatory Schools: Mr. J. S. Norman. Private Schools Association: Mr. S. Maxwell. College of Preceptors: Mr. W. G. Rushbrooke. Teachers' Guild: Miss M. E. Robertson. Froebel Society: Miss L. James.

*Specialist Teachers' Group.*—Association of Technical Institutions: Mr. F. Wilkinson. Association of Teachers in Technical Institutions: Mr. P. Abbott. National Society of Art Masters, Art Teachers' Guild, Royal Drawing Society: Mr. H. B. Carpenter. Royal Academy of Music, Royal College of Music, Union of Graduates of Music (Incorporated), Union of Directors of Music in Secondary Schools, Incorporated Society of Musicians, Guildhall School of Music, Royal College of Organists: Dr. H. W. Richards. National Shorthand Association (Incorporated) Teachers' Section, Society of Pitman's Certificated Teachers of Shorthand, Association of Book-keeping Teachers, Incorporated Society of Commercial Teachers: Mr. Alfred Nixon. Association of Teachers of Domestic Subjects: Miss M. E. Marsden. National Association of Manual Training Teachers, Educational Handwork Association: Mr. H. Turville. Incorporated Gymnastic Teachers' Institute, British College of Physical Education, Ling Association, National Society of Physical Education: Mr. Guy M. Campbell. Union of Teachers of the Deaf on the Pure Oral System, National College of Teachers of the Deaf, College of Teachers of the Blind: Mr. A. J. Story. Smith Training College of the Royal Normal College for the Blind: Miss M. M. R. Garaway. Training College Association (with which is amalgamated the Teachers' Training Association): Prof. John Adams.

At its first meeting on Friday, the 21st September, the new Council decided unanimously to invite Dr. Michael Sadler, Vice-Chancellor of the University of Leeds, to become Chairman for a further period. During the past few months Dr. Sadler has been absent in India in connexion with the Calcutta University Commission, but he is expected to return at the end of the year, when he will doubtless take up his duties with the Council.

The Registration Council has passed resolutions congratulating the Minister of Education on the passage of the new Education Act, and expressing the hope that the Pensions Bill, which has been drafted, will also become law at the earliest opportunity.

In view of the new situation which has been created for private schools by the passing of the Education Act and the operations of the Secondary School Examinations Council, it is to be hoped that all qualified teachers in private schools will become registered without delay.

#### THE DEAN'S REPORT.

In addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Report of the Council, I have now to submit to you some details concerning the Midsummer Certificate and Lower Forms Examinations, together with extracts from the reports of the Examiners.

The examinations were held on the 24th to the 29th of June at the following places in the United Kingdom:—Aberdeen, Alnwick, Bartersea, Belfast, Belper, Bentham, Benlah Hill, Birmingham, Blackburn, Blackpool, Bournemouth, Bridgend, Brighton, Bristol, Broudstairs, Cardiff, Carmarthen, Carmarvon, Cheltenham, Cork, Croydon, Darlington, Dumfries, Edinburgh, Exeter, Farnborough, Glasgow, Grove Ferry, Henton Moor, Highgate, Huddersfield, Isle of Caldey, Launceston, Leeds, Leicester, Liverpool, London, Lostock Gralam, Manchester, Mayfield, Mountmellick, Newcastle-on-Tyne, New Quay (Cardigan), Nottingham, Ongar, Pencader, Plymouth,

Pontypridd, Portsmouth, Richmond (Surrey), Rochester, Rugeley, Scorton, Sevenoaks, Sheffield, Southampton, Southport, Southsea, Sunderland, Taplow, Taunton, Waltham Cross, Wandsworth Common, Wellington (Salop), Wem, Wembley, West Hartlepool.

The Examinations were also held at the following Colonial Centres:—Abeokuta, Castrics (St. Lucia), Cape Coast, Georgetown (British Guiana), Gibraltar, Malta, Mandeville (Jamaica), Penang, and Rangoon.

The total number of candidates who sat for the Certificate Examination was 2273—1552 boys and 721 girls.

The following table shows the proportion of candidates who passed in the grade for which they were entered:—

		Examined	Passed	Percentage
Boys.	Senior .....	152	66	43
	Junior .....	669	386	58
	Preliminary .....	515	356	69
GIRLS.	Senior .....	120	50	42
	Junior .....	244	144	59
	Preliminary .....	212	155	73

The above table does not take account of those candidates who obtained Certificates of a lower grade than that for which they were entered, nor of those (361 in number) who entered for certain subjects required for professional preliminary purposes.

The number of candidates who sat for the Lower Forms Examination was 811—513 boys and 298 girls. Of these 354 boys and 211 girls passed, or 69 and 71 per cent. respectively.

## EXTRACTS FROM EXAMINERS' REPORTS.

### Scripture History.

**Senior.**—The results in this grade were distinctly encouraging. Some of the papers were of exceptional merit, and in a large proportion of the rest good work was shown up. The facts of the periods taken were well known, and many candidates proved themselves capable of grappling with the deeper questions, such as those dealing with Old Testament morality and the teaching of certain parables on the kingdom of heaven. There was, however, not much evidence of careful study of the two prophets whose books were among the set portions of the Old Testament. It cannot be too strongly urged that the only key to the understanding of the Old Testament is in the knowledge of the prophets, and that candidates in the Senior Grade have reached a stage in which this should constantly be kept in view. In the New Testament sections errors in some of the papers suggest the need of directing attention to the information about the background of the New Testament, now accessible even in the simpler handbooks, on such points as the Roman system of government, contemporary religious beliefs of the pagan world, and the like.

**Junior.**—Except in the case of a few groups of papers the work in this grade was very well done. The subject had been prepared intelligently; the answering as a rule was apt and accurate. Some of the papers which reached the mark of distinction were excellent. In almost every case of failure, failure was due to want of adequate preparation.

**Preliminary.**—The answers showed keen interest in the subject, and "distinctions" were more numerous than failures. The Bible itself had been studied, and not merely textbooks of Bible history. It should be noted that the statement of facts is insufficient, unless they are directed to meet the point of a question. The Examiner regrets to find a tendency to turn the lessons of Gospel parables into worldly maxims, to the neglect of their spiritual force. Care should be taken that candidates understand the diction of the A.V.; e.g. the grammatical use of "thou" and "ye"; that "servant" does not mean "maidservant," and so forth.

**Lower Forms.**—Taking the written answers as an indicative rather than a complete statement of what the candidates know, the work in general was very satisfactory. The Gospel of St. Matthew is long, but it seemed to have been well studied throughout. Answers to the Old Testament questions were given in vigorous style, and contained little that was wrong. Composition was very good; evidently these juniors are being carefully trained to express themselves.

### English.

**Senior.**—The papers as a whole were remarkable for the small percentage that were really bad. In the Literature answers the chief fault was the fundamental fault of ignorance of the actual text of the author; no comments learned by heart can make up for this. "Romola" was too big a burden for the majority. In Grammar the weak point was parsing. The essays were in most cases good.

**Junior.**—The general level of attainment was quite satisfactory. The best portion of the work was the Composition. Several meritorious essays were shown up, and carelessness and flippancy were rarely met with. A few candidates, however, missed the point of the subjects set, and wrote e.g. about the past history of aircraft instead of its

future possibilities. Of the Literature sections, the answers to the "Tale of Two Cities" were by far the best. The stories of both the Shakespeare plays were known very well, but many of the attempts at criticism were rather thin; "The Tempest" gave a better result than the "Midsummer Night's Dream." Only a small proportion took "Woodstock," and these answered very fairly. In the Grammar paper the result was disappointing. The analysis, parsing, and formal grammar were done satisfactorily, but the questions calling for reasons for correcting sentences and the accurate meanings of words were apparently too hard for the majority. The dividing into lines of a not too difficult piece of Tennyson resulted in almost entire failure; very few knew how many syllables went to the line, or made their lines of equal length. Some attention should always be given to the metre of a poem read. There was too much tendency to avoid explanations. Very few could show how the meaning of a sentence is altered by moving the emphasis from one word to another. On the whole the Literature papers were done better than those on Grammar and Analysis.

**Preliminary.**—Most took the paper in Composition and Grammar, and showed a fair elementary knowledge. Some confusion was displayed in distinguishing between the object and the extension of the predicate. Few understood that a word is not necessarily always the same part of speech; but the cases of the nouns and pronouns mentioned in Question 3 were generally correctly stated; it was satisfactory to notice that many candidates had been taught to use the reformed nomenclature of the cases. That nomenclature recommended now in the Board of Education's Report should be regularly adopted. The answers on the comparative and superlative of "faintly," "dim," "near," and "weary" were marred by bad spelling, and the alternative form, "next," was seldom remembered.

The set books were well known, the work on Macaulay's "Lays" being perhaps the best. Candidates remembered what had been told them, but few could depend on their knowledge of the poems to describe the scenery of Italy and the excitement at Plymouth when the Armada was sighted. Only a small number of candidates were examined on "Marmion"; these generally acquitted themselves well. Contexts and allusions in both papers were known well. In "Robinson Crusoe" many who knew the book best lost marks by giving so much time to the first question that they could not complete the paper.

The essays were very unequal. While some were neatly written, well expressed, and well punctuated, a great many were disfigured by bad writing, loose syntax, and absence of stops. Some candidates gave very graphic descriptions of houses; others contented themselves with stating the number of windows, doors, and rooms. Some very interesting essays were composed on the future occupation of the writer. The one generally chosen was engineering; but they ranged from those of Prime Minister and admiral (in order to defeat Germany) to those of explorers, bank managers, doctors, farmers, typists, and shopkeepers. The adventures of the dog (the third subject set) were often told with humour and sympathy, but the least able of the candidates generally chose this for their essay, and some of the stories were wildly improbable.

**Lower Forms.**—Grammar: Generally speaking, the grammar was rather poor. Not a single candidate restored the prose order of Question 3 into absolutely correct metrical order. All blurred the last two rhyming lines, though many succeeded with the first two. In Question 6 many candidates concocted sentences which did not reveal what the required words meant.

Dictation, &c.: The spelling was far from good, but the reproduction of the matter was excellent, and the punctuation good. The handwriting appears to be somewhat improved in the general work, but the set copies are still poorly handled.

English Literature: Most took the paper on "Macaulay." There was more evidence than usual of an interest in and a careful study of the subject selected, and many very creditable papers were sent in. But in far too many cases the subject had been dealt with perfunctorily and unintelligently. Candidates usually find great difficulty in substituting words of their own for those of the author. Punctuation needs attention.

### English History.

**Senior.**—The work showed on the whole some improvement on previous examinations, both in knowledge of the subject and in style of answers. Among those who passed, a great many wrote thoughtful answers and showed good knowledge in some portions of their papers. Many failures were due to inattention to the wording or limitations of some questions, so that the answers were not to the point. For instance, in a question on our colonial gains in the French wars of A.D. 1793-1815, nearly all who selected this question wrote about Wolfe and Clive. In a question on the origin of the House of Commons as a separate body, nearly all gave an account of the origin of Parliament, and failed to notice the point of the question. In dealing with the Industrial Revolution during the latter half of the eighteenth century, very few dealt with the period named.

Instead of giving a definite account of the circumstances leading to the American Declaration of Independence some wrote a general account of the struggle after the Declaration.

**Junior.**—The average work was better and a larger proportion passed than usual. Very few could write intelligently about the beginnings of the House of Lords or the House of Commons, and history teachers might very well try and supplement the dry statements of the textbooks on this subject. The Industrial Revolution was often written about as if it were a revolt of the working classes. Very slight knowledge of Colonial history in the nineteenth century was shown. Chronology needs attention.

**Preliminary.**—A fair knowledge of the leading features of the various periods was displayed, and the work of many candidates was sound and promising. Those who selected the latest period had not the same grasp of the subject as those who studied the early history—a proof that the nineteenth-century history is hardly suitable for young students. Some papers showed traces of dictated notes—a fatal method of teaching history, especially at this stage. Arrangement of answers, spelling, and punctuation need attention.

### Geography.

**Senior.**—The chief points to be noticed in the answers are as follows:—In the case of the contoured map, candidates too frequently placed the two mountains in small areas on opposite sides of the map, leaving most of it not contoured, with the result that the river, usually without tributaries, had no fall for the greater part of its course. Though many attempted to draw a net for a map of England, using a conical method of projection, only three had any correct idea of how to go to work. Many made a sailor determine his latitude and longitude by the compass, while a group of nineteen candidates made him measure the distance in miles of his position from the Equator and the first meridian, and calculate them from these data. Many attempted the question on the origin of the Alps, and also that on natural regions, entirely from "the light of nature." Candidates should be warned against answering questions of which they have been taught nothing while neglecting questions about which they have learnt something. A little more accurate knowledge is required on permanent winds and weather charts. Attempts to draw maps of Belgium and of the districts in Asia where our soldiers are at present fighting were not often successful. The question on productions brought out the general ignorance of some candidates: thus, several said nitre was a plant, one candidate stating that it and sulphur required a hot climate, while several others said it wanted a wet one. Smoke, fire, lather, and stone still figure as typical volcanic products.

**Junior.**—These candidates appear to have been above the average, or—what is even more gratifying—the improvement in geography, which is a marked feature of recent years, is still making way. The set maps were done more carefully, the physical geography better correlated with the political, and the general knowledge more advanced than is usual amongst the Juniors. Many candidates, however, ignored the instructions at the head of the paper. The filling-in of the outline maps was as usual a perfectly safe test as to the quality of the rest of the paper. This is interesting in view of the fact that this kind of question is sometimes decried as being too closely akin to those of the despised "memory" type to be satisfactory. Of the four sections, Africa was perhaps the best done. The contour map of Section D was, as a rule, satisfactory, but there were some lamentable failures here. Many of the contour maps, too, were shown up without a scale of miles. The chief lapses in the rest of the various sections were confined to such details as the forgetting that climate (Question A 3) is a question of rainfall as well as of temperature, that in comparing one river with another (Questions A 4, B 10 b, and C 10 b) or one country with another (C 6) it is necessary to know something about both of them, that the Sudan is not the Sahara (B 6), that the tsetse fly does not sting (B 8), that "corals" are not "insects" (D 7), and that the White and Blue Niles are not really distinguished by their colours (D 10).

**Preliminary.**—These papers were not very satisfactory. A large number of candidates started badly with the initial question—an outline map of the British Isles to be filled in with certain names—and never recovered themselves afterwards. Indeed, a similar outline map was better done on the whole by the Lower Form candidates. The other British questions were answered too generally and too inaccurately to receive many marks. Of the special subjects, Section B, Europe, was more favoured and gave better results than did Section C, The British Empire. There was much inaccuracy in both sections, especially in points of elementary knowledge, such as the meaning of a "river basin" and the expression an "extreme" climate. There was a great deal of very indifferent writing and spelling, and the "English" throughout was below the normal standard of this grade.

**Lower Forms.**—The type of question most favoured, and accordingly most successfully answered, was that involving a short

descriptive answer—an applied definition (Question 2) or an explanation (Questions 3 and 8) or a simple cause (Question 4); the least satisfactory was anything requiring a longer and more essay-like attempt. This is only natural, considering the ages of the candidates. Nevertheless, one looked for better answers on the effect of physical features on railway communications in certain well defined regions of the British Isles. The connexion between physical and economic geography should not be too difficult for even very young boys and girls, and is certainly interesting enough to catch and arrest their attention. The filling-in of the outline map was on the whole good. The most conspicuous error was a result of the inaccurate mentality which inserts the name of a river, a mountain, a town without anything beyond the name to indicate locality, or which impartially draws its rivers surmounting ranges of hills or flowing from seashore to seashore.

### Arithmetic.

**Senior.**—The paper was not a hard one for those who had any knowledge of arithmetic, the only general failure among the better candidates being in the question on the metric system. But there was a very large amount of hopelessly bad work. Noticeable among the weaker papers was the failure to understand Questions (1), (5), (6), and the vague ideas as to the number of square yards in an acre.

**Junior.**—On the whole the work was badly set out. In many cases the working was not shown, and some candidates did not seem to know whether the working was an integral part of the sum or merely a means to an end. For instance, Question 3 was one in which the working is the sum, and should have accompanied the question and shared its tidiness. Very few realized that, with a degree of accuracy stated, contracted methods were inferred, and with that few there was great uncertainty as to how many figures should be retained; the Italian method was used by three or four candidates only. Among the few who started Question 10 there was a confusion between 20 ft. square and 20 square feet.

**Preliminary.**—Inaccuracy in working out results when right methods were employed was far too frequent. There was improvement in the manipulation of vulgar and decimal fractions, and the work generally was orderly.

**Lower Forms.**—This paper was on the whole well done, and calls for no special comment. As regards Question 9, young candidates need continual reminders that what the examiner wants is not merely a statement of results, but especially to see how those results are obtained. When, however, nothing is given but a cloud of figures put down carelessly and without regard to order, it is next to impossible to trace the connexions amongst them.

### Algebra.

**Senior.**—Factorization was weak. The first simplification was usually done in a heavy manner, all the fractions being at once taken together, instead of first in pairs. The surd simplification was often done correctly, but a good many made mistakes, though most took it in hand the right way. There were a number of good answers to the questions on equality of ratios and the rider on it, but the question on the thickness and diameters of the two coins was very seldom done correctly. A few obtained a correct solution of the ratios problem, but as a rule mistakes were made, though the fact that it was a problem in A.P. was generally recognized, and some of the answers were quite good and well explained. In the question on geometric progressions, many confused  $(\frac{4}{3})^n$  with  $\frac{4}{3}$  of 4", showing that they did not really understand what they were writing. The graphs as a rule were not good, chiefly from thick and shaky lines. This is a pity, for a little extra pains would have made quite good answers, there being very few absolute failures. The tank problem (Question 3) was an easy one, but few correct answers were obtained.

**Junior.**—The general standard attained was somewhat unsatisfactory. Mistakes in sign in multiplication, in subtraction, and especially in connexion with brackets, were frequent. More attention should be paid to these very important elementary ideas before pupils are taught the more difficult processes. The property of divisor and quotient as factors of the dividend was not generally understood even by those who quoted the Remainder Theorem to obtain their results, and in fractions there was a great deal of improper cancelling of terms from numerator and denominator which were not factors of them. The L.C.M. work was frequently unsound both in the direct applications and in the simple equation. Many of the attempts were spoiled by careless reading of the questions.

**Preliminary.**—Attention to signs, denominators, and correct cancelling, and to neatness of work is much required, particularly in some schools, and the candidates need considerable practice in solving simple problems.

### Geometry.

**Senior.**—The practical geometry was generally well done, the chief fault being that too small a scale was frequently used. In

Question 2 many candidates drew only one triangle. In Question 3 the common tangents were often drawn by guess, without construction. The fourth question was misread by about 20 per cent. of the candidates, a circle through  $A B$  and  $C$  being drawn. The straightforward bookwork portion of the theoretical geometry was well done, but the riders were poorly done on the whole, though there were a few candidates of exceptional merit.

**Junior.**—A large number of the candidates had no knowledge either of logic or of geometry. The unevenness of the knowledge shown at different centres was a very noticeable feature. One whole block of candidates would get good marks and the next block would nearly all fail. Candidates should realize that something more than a knowledge of the elementary constructions of practical geometry is required for this grade of examination, and that if they are required to obtain a numerical answer by calculation it is insufficient to give an approximate answer obtained from a scale-drawn diagram. A proof of an easy particular case cannot be accepted as demonstrating the truth of a general theorem, nor does measurement from a scale-drawn diagram constitute a proof. A matter of lesser importance is that the scales to which diagrams are drawn should always be clearly stated, and that if a definite scale is laid down in the question it should be adhered to by the candidate.

**Preliminary.**—Only about 20 per cent. of the candidates could be said to have any grasp of the elements of the subject. Most had no idea of the meaning of a proof, and either wrote down statements derived from the appearance of the figure or assumed in their "proofs" the properties they were attempting to prove. The following recommendations to teachers may be helpful. After having pursued the prescribed course of study the general results should be collected together and pupils given (1) in triangles the various sets of conditions under which two triangles are congruent and also the conditions which do not necessarily lead to congruency; (2) in parallels, the conditions under which lines are parallel and the areal properties of triangles and parallelograms between the same parallels; (3) in parallelograms, the various properties of the figure, carefully distinguishing between the definition and the properties derived from it. A great help to the clear appreciation of geometrical principles lies in the proper setting out of the work. When propositions are written out in "essay" form the pupil naturally finds it more difficult to follow the points of the proof, and the method of "steps" with each statement on a separate line, as adopted in many textbooks, appears to be preferable.

**Lower Forms.**—The easier constructions were done with neatness and accuracy by the majority of the candidates. Few candidates could solve the problem, and none could construct a parallelogram equal to a quadrilateral.

### Trigonometry.

The candidates, on the whole, were able to calculate by logarithms, knew the definitions, and made reasonable attempts at finding heights.

### Mensuration.

**Senior.**—Most answers were far from satisfactory. A few sent up good sets, partly spoiled by long calculations in certain cases.

### Mechanics.

**Senior.**—About half who took this paper had a good working knowledge of the fundamental principles of the science.

**Junior.**—Few candidates took the paper. Few showed up satisfactory work. The rest had little knowledge of the most elementary principles, and had clearly made no serious study of the subject.

### Book-keeping.

**Senior.**—The definitions were poorly done showing a lack of knowledge of terms. Questions 2 and 4 were generally ill attempted, while the arithmetical calculation required (interest on B/E) was very badly done. Most made a good attempt at Question 5.

**Junior.**—The Cash Book was generally well done, but bad arithmetical calculations in very many cases spoiled the Bought and Sold Books. The books were done, but the candidates had not been sufficiently practised in working out the invoices. They should be taught practical book-keeping, and not expect all figures to be given. The journalising was poor. The ledger, when attempted, was fair only. While the definitions in Part B were poorly done, the alternative question (B/E) was in most cases excellent.

**Preliminary.**—The Cash Book was generally well done. The Journal was fair, the entries required for "discounting bills," "rent due," and "interest on capital" being those most usually ill done. The Ledger was very fair. The answers to the definitions were poor. It is not sufficient to know how to enter items; candidates should understand the meaning of the terms they use, and so obtain an intelligent knowledge of the subject.

### French.

**Senior.**—There were indications in the work that most of the candidates had gone through a careful course of study. The outstanding weakness was an inattention to style and accuracy. In writing English the candidates were content with a translation so bald as to be meaningless. In writing French the sentences were very frequently spoilt by words incorrect in number, gender, person, or tense.

**Junior.**—While many of the papers give evidence of sound instruction on the part of the teachers, the general characteristics are uncertainty and weakness in elementary work. This comes apparently from vagueness of aim. If it were more generally understood that what the pupils are attempting to reach is such a knowledge of the elementary forms and vocabulary of the language as would allow them both to understand simple unseen passages and to express themselves on quite ordinary topics in well constructed but uncomplicated sentences, it would be clearer to all what road must be followed and what stages must not be missed. The language forms on which attention should be concentrated are those required for (1) making statements, (2) asking questions, (3) giving commands, positively and negatively. All matters concerned with subordination of thought (except the simplest, such as relative clauses) can be reserved for a later stage. With the forms mentioned should be combined the usual accidents, from which all exceptional and useless forms should be omitted. If the work were shortened and concentrated thus, time and effort would be saved and could be devoted to extending the vocabulary and to giving more practice in using French. We might then hope to have fewer candidates unable to turn affirmative sentences into the interrogative (Question 3), or giving up such attempts as "A mon frère donné nous un livre?" &c.; fewer, too, unable to answer the questions in No. 6 properly, and even to use the verbs of which they have an example in the question. Moreover, if these suggestions were followed, the translation into French and the free composition would not contain so much that is simply transliterated English.

**Preliminary and Lower Forms.**—The candidates showed much good work, the weak points being as usual, want of accuracy in vocabulary and concords. Some attempted the phonetic transcripts, but none used any of the recognized symbols, merely putting down the utterly inadequate English figured pronunciation. Phonetic transcripts have now been advocated for a good many years by all competent authorities; it is time for all schools to fall into line.

### Welsh.

**Senior.**—Many of the candidates were deficient in their English as well as their Welsh, and needed more practice in the reading and translation of ordinary Welsh books. The grammar was faulty and deficient. The one good feature was the essay, which was generally written in good easy Welsh, though marred by incorrectness in spelling. Welsh should be as seriously studied as any other modern language. Instead of that, a popular usage of it, undisciplined by study, is taken as all that is necessary.

**Junior.**—The work was uniformly good. The translations, taken as a whole, showed knowledge of distinctive idioms and expressions. The spelling and phrasing at times were too colloquial.

**Preliminary.**—The work was uniformly good. If the promise of this class could be brought to fruition it would render splendid results in the higher and more difficult stages.

### Latin.

**Senior.**—There was a large proportion of unsatisfactory papers both in Caesar and unprepared work in lieu of set books. The translation of both prepared and unprepared work was often very weak, and the same may be said of the grammar and translation of sentences into Latin. The few candidates who took Virgil and Cicero were of a higher average merit.

**Junior.**—The results were fairly satisfactory, except at a few centres where, owing probably to a depleted school staff, insufficient time had been given to the subject, and total failures were very numerous. About half the candidates translated the passages from the set books creditably; a few renderings were excellent. There was, however, a very large number of thoroughly weak papers. The answers to the questions on subject-matter were on the whole satisfactory. The number of candidates taking unprepared translation in lieu of set books was larger than usual. The drift of the prose passage was often understood, but the renderings were not sufficiently faithful; the verse was seldom attempted with success. The obligatory unprepared passage was not well done, but very few failed in it who had obtained good marks for the rest of their work. The drilling in grammar seemed to have been careful. The knowledge of accidents was adequate, the parsing very fair, and the questions on syntax answered creditably. About 20 per cent. of the candidates showed a good knowledge of ordinary constructions and idioms in translating the short English sentences into Latin, and four of these

obtained nearly full marks. It was disappointing to find so many who had done well in grammar making bad blunders in accidents and disregarding primary rules of syntax. In the additional paper on composition and unprepared translation several candidates showed intelligence and promise, but the general work was not good.

**Preliminary.**—Grammatical knowledge was still very defective. No real progress is possible without accurate knowledge of regular accidents.

**Lower Forms.**—There were no very excellent papers written, but a larger percentage of candidates did fairly well, and utter failures were fewer than in recent years. There was much bad spelling, which indicates insufficient practice in written work, and generally it is clear that not enough attention is paid to an accurate knowledge of elementary accidents.

### Light and Heat.

**Senior.**—Many of the candidates were unable to draw a diagram showing the images formed by two plain mirrors set at 60°, or even to show the graphical construction used to determine the position of the images formed by a convex lens. The question on the construction of an alcohol thermometer was answered badly. The ice point was usually determined by means of a mixture of ice and salt, and the method of determining the boiling point in steam was almost invariably described. The idea of heat as a form of energy seems not to be taught; in a senior course it should come first in relation to heat and temperature.

**Junior.**—None seemed to have any idea of what an image is or how a plane mirror forms one. Very few candidates seem to have seen the construction of a mercury thermometer. The very simple calculation on specific heat in Question 8 was beyond the powers of most, and the replies to Question 10, on the heating of the water in a kettle, were most disappointing. Conduction and convection were not mentioned, and the majority of the candidates seemed to think that the inside of the top of the kettle should be kept bright, otherwise, of course, the water would get dirty!

### Magnetism and Electricity.

**Senior.**—Mistakes in the measurement of electric current in ohms and testing for magnetic properties by an electroscope were common.

**Junior.**—The mariner's compass is not well known. In dealing with problems like Question 5 diagrams showing the various charges produced are needed. The galvanoscope was often described correctly, but there was no good diagram illustrating its construction.

### Physiology.

The papers show the same difference between the standards of the Senior and Junior papers which has been so marked a feature of the last examinations. The Junior papers were not only very much better relatively, but in many cases were absolutely better than the Senior papers. The Junior papers have been improving steadily for some years, and show evidence of really good and sound teaching in many centres and of receptive students. On the other hand, the Senior papers were poor, and the impression left after reading them was that the candidates in the greater number of cases had had little or no teaching and had done no serious study for themselves.

### Botany.

The work of the better candidates showed a clear improvement on that of former years, along the lines recommended in previous reports, but there is still much to be done before the general average can be regarded as even moderately satisfactory. In many schools this subject is evidently thoroughly neglected.

### Drawing.

The examiners desire to draw the attention of teachers to the practice—which has again become prevalent in all grades and in all subjects—of "lining in"; that is to say, of merely going over the original lines of the drawing without adequate care or reference to the example—frequently with a much too heavy or wiry line. Thus, any character or subtlety in the first drawing is in a large measure obliterated, and the grace and beauty frequently found in the primary sketch quite destroyed. This practice not only involves a waste of time which might have been devoted to correction and refinement of the first drawing, but costs marks.

The very last difficulty to be mastered by most candidates in drawing from models is the apparent convergence ("vanishing") of receding parallel lines. Demonstration from a big photograph print or diagram of some architectural subject, with flank rapidly and front slightly receding (or *vice versa*), ought to convince all pupils as to this fact of perspective. Many show poor appreciation of proportion in the ellipse, together with still poorer appreciation of its form. As a help, freehand drawing from large diagrams of round objects (such as a glass tumbler, barrel, &c.) is suggested for juniors.

**Senior.**—Drawing from Models: Subject to the strictures above,

the aspect of the bulk is satisfactory. Proportion between the several objects in the group was well observed on the whole.

**Drawing from Memory:** The object set (a carpenter's brace) seems to have stimulated the curiosity of the examinees in a valuable way. A high proportion, including many of the feebler folk, looked carefully for the features which constituted the brace an effective working tool and represented them with considerable success. This is a position which is hopeful for the future. At the top was a fair number of papers of fine character as records alike of facts and appearances.

**Junior.**—The general remarks which preface this report apply most forcibly in this grade. The number of drawings in all subjects apart from "lining in" was deplorable.

There is a strong presumption that large numbers of candidates who had previously done fairly well in the Preliminary grade of drawing from the flat entered again without further preparation on the speculative chance of getting through, but in many cases their equipment was inadequate for this grade. The example was not a difficult one, and the proportion of good papers was low.

**Drawing from Models:** Proportion was unusually well observed, very erratic presentations in this respect being relatively few. The position in which the plates were put was by no means easy, but a very fair proportion of candidates made representations ranging from passable to excellent. On the other hand, there has been something of a *débâcle* in respect of the board. The apparent rise from front to back should be from an eighth to a fourth of the extreme width, but the attempts in many cases showed a ratio up to or even exceeding three-fourths of the width, the drawings in these cases being virtually distorted plans. A few candidates added useful shading, but others put in darks that had no sense at all. There is, however, a leaven of really good work in this grade, amounting to about 20 per cent.

**Drawing from Memory:** It has recently been reported that a proportion of candidates chose easy views "to avoid difficulties; but it should be understood that high marks are avoided at the same time." This is emphatically true of junior candidates.

**Preliminary.**—**Drawing from the Flat:** In general the teaching appears to be good, the more satisfactory drawings being fairly numerous, while even the weaker ones give evidence of more system than formerly obtained in the methods used. Proportion and swing of curve were (for the most part) at least respectable, and a fair number of drawings showed appreciation of somewhat subtle forms.

**Drawing from Models:** The drawings submitted were fairly satisfactory and in some cases quite good. The following advice may be usefully given:—Aerial measurement, vertically and horizontally, at arm's length (with the thumbnail on the pencil) for comparing apparent height with width will greatly assist in securing an effect of flatness in circular as well as rectilinear surfaces. The apparent rise of a receding line should be tested by holding the pencil horizontally so that it seems to touch the near end, the extremity of the pencil being slipped out exactly under the more distant end of the line (or, if the line extends to the right of the near point, the thumbnail slid along it till it is under the further point). This makes, aerially, a right-angled triangle whose base and (apparent) altitude combine to give the (apparent) inclination of the hypotenuse.

**Lower Forms.**—The example set was designed to test candidates' powers of drawing a simple scroll and arranging thereupon a few leaf-like forms. Up to the limits required for rudimentary drawing the average was satisfactory. Rather more than 25 per cent. were quite good.

### Political Economy.

**Senior.**—Some papers showed knowledge of principles and practical application. In others old illustrations from Adam Smith showed that teachers had not kept abreast of current thought on the subject.

### Domestic Economy.

The schools sending in candidates had made the subject one of definite interest. The candidates took most of the work quite seriously, and had undoubtedly been very well taught.

A vote of thanks to the Chairman for presiding concluded the proceedings.

## THE COLLEGE OF PRECEPTORS.

### MEETINGS OF THE COUNCIL.

A MEETING of the Council was held at the College of Preceptors, Bloomsbury Square, W.C., on the 28th of September, 1918. Present: Mr. R. F. Charles, Vice-President, in the Chair; Mr. Bain, the Rev. J. O. Bevan, Mr. Brown, Mr. Cholmeley, Dr. Dickinson, Miss Frodsham, Mr. Hawe, Mr. Hay, Miss Lawford, Mr. Maxwell, Mr. Pendlebury, Miss Punnett, Mr. Rushbrooke, Mr. Starbuck, the Rev. Canon Swallow, and Mr. Thornton.

The Council received with deep regret the news of the death of the Right Rev. Bishop Mitchinson, who had been a member of the College for nearly fifty years, and who was at one time a member of the Council.

The Secretary reported the receipt of the following letter from the Ministry of National Service:—

Ministry of National Service,

Westminster, S.W.1.

July 31, 1918.

SIR,—I am directed to reply to the letter of the 19th inst., signed on behalf of the College of Preceptors and by the Chairman on behalf of the Private Schools Association, and to inform you that the position of teachers at private schools, not recognised by the Board of Education, has recently been under the consideration of this department. Instructions have now been issued that no man who is now whole-time engaged as a teacher of general educational subjects, whether, literary, technical, or scientific, in any school which was established before the War, and which provides a general education to boys or girls, and who was engaged as a teacher (not necessarily as a head master or at the same school) before the War, is for the present to be called up for service, if he falls within the following classes, namely:—

A. Teachers of any Grade born in or before the year 1872.

B. Head masters born in or before the year 1881 who are in Grade 2 or Grade 3.

C. Assistant masters born in or before the year 1877 who are in Grade 2 or Grade 3.

Masters who are not protected under the above have, of course, the right of making application for exemption to the tribunals, in accordance with the existing tribunal regulations.—I am, Sir, your obedient servant,

F. J. TUCKER,

for Director-General of Recruiting.

Letters were submitted from teachers now engaged in military service asking that time spent in military service might be taken into consideration in relation to the regulation which requires a certain period of teaching experience in the case of candidates for the College diplomas. The Dean was empowered to deal with each application of that kind on its merits.

Diplomas were granted to the following candidates, who had satisfied the prescribed conditions:—Licentiatehip—Raymond Leslie Callow; Associateship—Thomas Joseph Downes, Alfred Victor Evans, Brook Senior.

The Secretary reported an increase in the number of entries for the September Professional Preliminary Examination as compared with the corresponding examination for last year.

The following persons were elected members of the College:—

Miss M. Bennell, B.A. Lond., A.C.P., Crouch End High School and College, N.8.

Mr. F. T. Brooks, L.R.A.M., A.R.C.M., A.T.S.C., 27 Thistlewaite Road, Clapton, E.5.

Mr. A. L. Hill, A.C.P., 2 Brecon Villas, Springfield Road, Windsor.

Mr. R. J. D. Smith, A.C.P., 68 Marlborough Street, South Shields.

Mr. E. T. Williams, A.C.P., Nook, Gronant Road, Prestatyn, North Wales.

The following books had been presented to the College since the last meeting of the Council:—

By the CAMBRIDGE UNIVERSITY PRESS.—Reddaway's *Macaulay's History of England*, Chapter III.

By W. HEFFER & SONS.—Pussy's *Lectures Françaises Phonétiques*.

By MACMILLAN & CO.—Fowler's *English Exercises for Middle Forms*, Part I; Roe's *Tales from Indian History*.

By the OXFORD UNIVERSITY PRESS.—Bryant and Hughes's *Map Work*; Freeman's *Virgil Aeneid VI*; Gough's *Spenser's Faerie Queene*, Book V; Hughes's *Carlyle's Past and Present*; Thornaby Jones's *Plautus Menacchmi*; Miles and Smith's *Matthew Arnold's Essays in Criticism*.

By RIVINGTONS.—Massard and Durno's *French Grammar*; Massard's *French Exercises*.

By the UNIVERSITY TUTORIAL PRESS.—Allen's *Shakespeare's Antony and Cleopatra*; Bradshaw's *Social History of England*.

Calendar of National University of Ireland.

Calendar of St. Andrews University.

Calendar of Glasgow University.

Calendar of Birkbeck College.

Calendar of University of Manitoba.

A MEETING of the Council was held at the College of Preceptors, Bloomsbury Square, W.C., on the 26th of October, 1918. Present:—Sir Philip Magnus, President in the chair; Prof. Adams, Dr. Armitage-Smith, Mr. Bain, Mr. Barlet, Mr. F. Charles, Mr. R. F. Charles, Mr. Cholmeley, Dr. Dickinson,

Miss Frodsham, Mr. Gregory-Taylor, Mr. Hardie, Mr. Maxwell, Mr. Morgan, Mr. Pendlebury, the Rev. C. J. Smith, Mr. Starbuck, Mr. Thornton, and Mr. Whitbread.

The following resolution was adopted:—"That this Council is of opinion that the benefits of any scheme for the superannuation of teachers should apply to all efficient teachers." A special Committee was appointed to deal with the matter.

Miss Crookshank, Mr. Dymond, Mr. Rawlinson, and Mr. White were re-elected members of the Council.

Mr. F. E. Butcher, L.C.P., Fernside, Limes Hill, Tenterden, was elected a member of the College.

The following books had been presented to the College since the last meeting of the Council:—

By the OXFORD UNIVERSITY PRESS.—Fraser's *La Victoire par les Couleurs*, &c.; Hussall's *France Medieval and Modern*; Kittson's *Language Teaching*; Papillon and Haigh's *Virgil Aeneid X*; Petrie's *Introduction to Roman History*, &c., and *Latin Reader*.

## RECENT EVENTS.

### THE TEACHERS REGISTRATION COUNCIL.

THE Third Triennial Period of the Teachers Registration Council began in July, and the members assembled for the first time in September last. The new Council is composed as follows:—

#### UNIVERSITY TEACHERS' GROUP.

The Hebdomadal Council of the University of Oxford—The Very Rev. Dr. T. B. Strong.  
The Council of the Senate of the University of Cambridge—Mr. W. Durnford.  
The Senate of the University of Durham—Prof. F. B. Jevons.  
The Senate of the University of London—Sir Gregory T. Foster.  
The Council of the Victoria University of Manchester—Prof. J. J. Findlay.  
The Council of the University of Birmingham—Prof. E. de Selincourt.  
The Council of the University of Liverpool—Prof. E. T. Campagnac.  
The Council of the University of Leeds—Prof. B. M. Connal.  
The Council of the University of Sheffield—Prof. J. A. Green.  
The Council of the University of Bristol—Prof. J. Wertheimer.  
The University Court of the University of Wales—Principal Sir Harry Reichel.

#### ELEMENTARY TEACHERS' GROUP.

National Union of Teachers—Mr. W. D. Bentliff, Miss I. Cleghorn, Miss E. R. Conway, Mr. H. Pearson, Mr. G. Sharples, Mr. W. B. Steer, Miss J. F. Wood.  
National Association of Head Teachers—Miss E. F. L. Goodwin, Mr. J. W. Iliffe.  
National Federation of Assistant Teachers—Mr. W. T. Kenward, Miss E. Phillips.

#### SECONDARY TEACHERS' GROUP.

Head Masters' Conference—Mr. M. J. Rendall.  
Head Masters' Association—Sir John McClure.  
Head Mistresses' Association—Miss F. M. A. Gadesden, Miss E. R. Gwatkin.  
Assistant Masters' Association—Mr. A. A. Somerville.  
Assistant Mistresses' Association—Miss E. S. Lees.  
Association of Preparatory Schools—Mr. J. S. Norman.  
Private Schools Association—Mr. S. Maxwell.  
College of Preceptors—Mr. W. G. Rushbrooke.  
Teachers' Guild—Miss M. E. Robertson.  
Froebel Society—Miss L. James.

#### SPECIALIST TEACHERS' GROUP.

Association of Technical Institutions—Mr. F. Wilkinson.  
Association of Teachers in Technical Institutions—Mr. P. Abbott.  
National Society of Art Masters, Art Teachers' Guild, Royal Drawing Society—Mr. H. B. Carpenter.  
Royal Academy of Music, Royal College of Music, Union of Graduates in Music (Incorporated), Union of Directors of Music in Secondary Schools, Incorporated Society of Musicians, Guildhall School of Music, Royal College of Organists—Dr. H. W. Richards.  
National Shorthand Association (Incorporated) Teachers' Section, Society of Pitman's Certificated Teachers of Shorthand, Associa-

tion of Book-keeping Teachers, Incorporated Society of Commercial Teachers—Mr. A. Nixon.

Association of Teachers of Domestic Subjects—Miss M. E. Marsden.  
National Association of Manual Training Teachers, Educational Handwork Association—Mr. H. Turville.

Incorporated Gymnastic Teachers' Institute, British College of Physical Education, Ling Association, National Society of Physical Education—Mr. G. M. Campbell.

Union of Teachers of the Deaf on the Pure Oral System, National College of Teachers of the Deaf, College of Teachers of the Blind—Mr. A. J. Story.

Smith Training College of the Royal Normal College for the Blind—Miss M. M. R. Garaway.

Training College Association (with which is amalgamated the Teachers' Training Association)—Prof. John Adams.

At its first meeting the Council unanimously elected Dr. Michael Sadler as Chairman for the period 1918-21. It also passed a resolution congratulating the Minister of Education on the passing of the Education Act, and another welcoming in general terms the proposals for the State Superannuation of Teachers.

The number of applicants for admission to the Register is now 23,000, and during recent months the progress has been very marked. Up to the middle of October there was an increase of nearly 2,000 applications as compared with the corresponding part of 1917.

#### ORDER OF THE BRITISH EMPIRE.

MR. R. F. CHOLMELEY, Head Master of Owens College, Islington, and a member of the Council of the College of Preceptors, has been admitted to the Order of the British Empire, and is therefore entitled to be described as O.B.E. We understand that this new distinction is giving equal gratification to Mr. Cholmeley's friends and to others.

#### REGULATIONS FOR THE TRAINING OF TEACHERS.

THE Board of Education (Welsh Department) announce that an opportunity has been taken to revise as a whole the provisions relating to the preliminary education and training of candidates for the teaching profession, and to recast them in a shorter and clearer form. It is hoped that this revision will enable the Board to introduce some simplification of procedure and to make some reduction in the returns at present required.

#### DEATH OF MR. F. H. DALE, C.B., CHIEF INSPECTOR OF ELEMENTARY SCHOOLS.

We regret to have to record the death of Mr. F. H. Dale, the Chief Inspector of Elementary Schools since 1913. He was educated at St. Paul's School, obtaining a Scholarship at Balliol, where he obtained high distinction in classics, carrying off every possible University and College prize. In 1896 he was elected to a Fellowship at Merton College, and after a short period of service on the staff of Borough Road Training College he joined the Board of Education. His work there has been marked by a rare judgment and knowledge of affairs. Always accessible and kindly, his friendship was valued by his colleagues, and his generous help was welcomed by all who had to meet him in conferences or elsewhere. His death at the early age of forty-six removes one who had already done great service for education, and was expected to do still more.

MANUSCRIPT WRITING.—For some years past attempts have been made to popularize manuscript writing and to introduce it into the schools. The subject was discussed at the L.C.C. Teachers Conference in 1913, with the result that this method of writing was adopted in several London schools with highly gratifying results both as regards speed and legibility. In 1916, at the April and November meetings of the Child Study Society several well known educational experts read papers dealing with the teaching and aims of Manuscript Writing, and these papers were subsequently published in *Child Study* for June 1916 and March 1917. Up to the present no books of this style of writing suitable for children have been available. The House of Cassell have placed on the market a copybook at 2d. net which should find a ready sale among the numerous teachers interested in the subject.

## OVERSEAS.

## A NEW YORK SCHOOL.

By ERNEST POOLE.

(Rewritten from a Chapter of the Author's novel,  
"The Family.")

It was one of the poorest streets in the teeming city of New York. Tall, dirty tenements rose on each side. But one sunny April morning, just before nine o'clock, I saw this street gay with crowds of children, torrents of bobbing hats, and ribbons, frocks and blouses, shirts and breeches—vivid reds and yellows and blues. It was deafening with joyous cries, a shrill incessant chatter-chatter, piercing yells and shrieks of laughter. Children, swarms of children, children of all sizes passed me: clean and dirty, smiling, scowling, hurrying, running, pummelling, grabbing, whirling each other round and round, till the very air seemed quivering with wild spirits and new life!

The school was close in front of them. An enormous building of brick and tile wedged into a disordered mass of tenements, shops, and factories, it had been built around a court shut out from the street by a high steel fence. I squeezed into the gateway, through which a shouting, punching mob of urchins was now pushing in; and soon from a balcony above I looked down into the court, where out of a wild chaos order was appearing. Boys to the right and girls to the left were forming in long sinuous lines, and three thousand faces were turned towards the building. In front appeared the Stars and Stripes. Then suddenly I heard a crash from underneath the balcony, and looking down I saw a band made up of some thirty or forty boys. Their leader, a dark Italian lad, made a flourish, a pass with his bâton, and the band broke into a blaring storm—an uproarious, booming march. The mob below fell into step, and line after line in single file the children marched into their school.

"Look up! Look all around you!" I heard the principal's voice in my ear. And as I looked up from the court below I gave a low cry of amazement. In hundreds of windows all around, of sweatshops, tenements, factories, in tier upon tier of fire escapes and even upon the roofs above, silent watchers had appeared. For this one moment in the day the whole congested neighbourhood had stopped its feverish labour and become an amphitheatre with all eyes upon the school.

I had a strange confusing time. In her office, in a daze, I sat and heard the principal with her two assistant principals, her clerk and her stenographer, plunge into the routine work of the day. What kind of school teacher was this? She seemed more like the manager of some buzzing factory. Messages kept coming constantly from classrooms, children came for punishment, and on each small human problem she was passing judgment quickly. Meanwhile a score of mothers, most of them Italians with coloured shawls upon their heads, had straggled in and taken seats, and one by one they came to her desk. For these women, who had been children in peasant huts in Italy, now had children of their own in the great city of New York, and they found it very baffling. How to keep them in at night? How to make them go to the priest? How to feed and clothe them? How to live in these tenement homes, in this wild din and chaos? They wanted help and they wanted advice. The principal spoke in Italian, but turning to me she would translate from time to time.

A tired, scowling woman said: "My boy won't obey me. His father is dead. When I slap him he only jumps away. I lock him in and he steals the key; he keeps it in his pocket. He steals the money that I earn. He says I'm from the country." And a flabby, anxious woman said: "My girl runs out to dance halls. Sometimes she comes back at two in the morning. She is fifteen and she ought to get married. But what can I do? A nice steady man who never dances comes sometimes to see her, but she makes faces and calls him a fatty; she dances before him, and pushes him out and slams the door. What can I do?"

"Please come and see our janitor, and make him fix our kitchen sink!" an angry little woman cried. "When I try to wash the dishes the water spouts all over me!"

A truant officer brought in two ragged, frightened little chaps. Found on the street during school hours, they had to give an account of themselves. Sullenly one of them gave an address far uptown, ten miles away. They had not been home for a week, he said. Was he lying? What was to be done? Somewhere in the City their homes must be discovered.

And this was part and parcel of the daily work in school. Still dazed, disturbed but curious, I sat and watched and listened, while the bewildering demands kept crowding in upon the school. I went to a few of the classrooms and found that reading and writing, arithmetic, and spelling were being taught in ways which I had never dreamed of. I found a kindergarten class, a carpenter shop and a printing shop, a sewing class, and a cooking class in a large model kitchen. I watched the nurse in her hospital room; I went into the dental clinic, where a squad of fifty urchins were having their teeth examined; and out upon a small side roof I found a score of small invalids in steamer chairs, all fast asleep. It was a strange, astounding school! The principal spoke of a mothers' club and a neighbourhood association; and I learned of other ventures here, the school doctor, the nurse, and the visitor endlessly making experiments, delving into the neighbourhood for ways to meet its problems.

"How many children are there in the public schools of New York?" I asked.

"About eight hundred thousand," was the reply.

I reached home limp and battered from the storm of new impressions. I had thought of a school as a simple place, filled with little children—mischievous at times, perhaps, and some with dirty faces, but still with minds and spirits clean, unsoiled as yet by contact with the grim spirit of the town. Instead of that I had been disturbed and thrilled by the presence all around me of something wild, barbaric, dark, compounded of the city streets, of surging crowds, or rushing feet. But I could still hear that band. And behind its blaring crash and din I had felt the vital throbbing of a tremendous joyousness, of gaiety, fresh hopes and dreams, of leaping young emotions like deep buried bubbling springs bursting up resistlessly to renew the fevered life of the town!

And I thought: "In this strenuous chaotic seething life of ours there are many forces working ceaselessly for a deeper and richer and wider democracy, more justice and more freedom, more true feeling and clear thinking for every man and woman and child. But of all such forces none compares to this tremendous growing power of our American public schools."

## VOCATIONAL GUIDANCE IN THE UNITED STATES.

By JOHN M. BREWER, of the State Normal School,  
Los Angeles, California.

EDUCATION in the United States has always been practical in the sense that it is intended to help children live their daily lives more intelligently. Ten years ago a group of Boston people wished the schools to aid the children to understand the complexities of the occupational world and fit themselves for making the inevitable decisions necessary to take their places as self-supporting and effective citizens. Accordingly teachers were instructed concerning many occupations, the advantages of each, the disadvantages, the requirements for success, remuneration, desirable preparation, and the relation of the occupation to life. Other cities all over the country took up the work, but it was soon found that a more comprehensive programme for vocational guidance was needed. Such plans are now being worked out, and they include six general features, outlined as follows:

1. The school work must be improved to give the child a better foundation on which to build his career. Thus, every boy and girl in a democracy must be given some knowledge of economics and sociology so that he can become an intelligent voter, protect himself from exploitation, understand some of the principles of effective co-operation, and find out the basic principles on which occupational relationships rest. The studies of the child must aid him to analyse and solve his present and future problems. It is becoming evident that the child's education must be broad; he must, of course, study book subjects, but he must also have some elementary practice in mechanical exercises, in gardening, in commercial opera-

tions, and in the co-operative activities represented by pupil self-government and student activities.

2. The more common occupations should be studied so that the child may have the benefit of a comprehensive survey as a basis for choice. This survey is made in many schools through geography, civics or language, but in a growing number there is a separate class for the study of occupations, sometimes called the "life-career class." Not alone has this study an individual value, but it is also important as showing the interdependence of people and the bonds of sympathy which unite us to people in all kinds of callings all over the world.

3. After the enlightenment of a broad . . . school programme, together with a survey of occupations, the child is better fitted to think about his own choice. This choice may be made by the process of elimination, each child studying several occupations until his interest centres on one. Although vigorous attempts have been made to find short cuts based on physical and mental tests of various kinds, on the whole the selection of one's occupation is a matter of study and individual decision. Advice will help if offered by one who knows the person and the vocations.

4. After the choice is made the child is ready for vocational education. During the past few years marvellous progress has been made in this field, and recent stimulus has come through the aid furnished the states by the national government. Much vocational education, especially in the trades, is being carried on under a part-time arrangement, that is, half the time in school and the other half in the shop. This enables the boy or girl to earn money to continue studying longer, and gives a more intelligent and practical education than could either the school or shop alone.

5. Beginning work is difficult for the boy or girl, because no satisfactory way has been found to bring job and worker together, and because the worker is so seldom instructed in his new duties. Many progressive schools try to gather and disseminate knowledge about openings and to supervise the early experiences of young workers. In many factories and stores special officers are given the duty of hiring and teaching the new workers, making transfers and promotions, caring for their welfare, and otherwise improving the personnel of the establishment. Municipal, state, and national employment bureaux and exchanges are gradually tending to supplant the privately owned employment agency.

6. This war has shown that the working experiences of all people must be made to contribute to their development and progress, and that it is unsafe in a democracy to allow industry to crush men's initiative or to throw them on the scrap heap. Accordingly employment managers are being trained, plans for co-operation between management and men tried, foremen instructed how to lead and teach instead of boss, and many establishments are making a serious effort to guarantee a satisfactory career and an American standard of living to every worker.

The vocational guidance movement is one of the biggest efforts in American education to-day. It is concerned with the progressive improvement of schools and industrial conditions, and with helping each child to make his vocational decisions in a manner beneficial to himself and to society.

**MANCHESTER GRAMMAR SCHOOL WAR MEMORIAL.**—A Committee of old boys, with Lord Sumner of Ibsstone as President, and Sir John Bradbury, K.C.B., Secretary of the Treasury, as Treasurer, is appealing for a sum of at least £20,000 to commemorate the Old Boys—more than 4,000 in number—who have served in the fighting forces in this war, over 400 of whom have given their lives. The objects of the fund are: (a) To assist in the upbringing of the children, sons or daughters, of any Old Boys who have fallen or been disabled; (b) to erect a permanent and worthy memorial in the school; (c) to issue a Book of Remembrance; (d) to provide new and enlarged accommodation for the teaching of science, having regard to the demands foreshadowed by the report of science teaching recently published. "We cannot think," say the Committee, "of any better War Memorial to those who have fallen than in helping the school thus to train more efficiently those who must take their places in building the new order of the future." The Committee invite proposals for commemorative scholarships some of which have been already founded. Donations should be sent to Sir John Bradbury's colleague in the treasurer-ship, Mr. R. T. Hindley, William Deacons Bank, Manchester.

# PELMANISM AND PEACE.

By ARTHUR F. THORN,

Author of "Richard Jefferies and Civilization," "Social Satires," &c.

THE truth that civilization has been strained almost to breaking point by the War will not be denied by those who are able to recall the cataclysmic events of the past four and a half years. Nothing less than a revolution has taken place in society, but its progress has been too gradual for immediate realization; the spectacular horrors of modern warfare have largely distracted the public consciousness from the social changes which have come about as a result of world conflict, but when peace comes these things will need to be appreciated in their true perspectives. The future will consist mainly of social problems that will demand the concentrated mental effort of every individual brain. Vital national issues directly affecting the lives of the people will demand serious consideration and successful treatment, not only by a few men of genius, but by the people themselves. There will be a vacuum in the social atmosphere that will draw all mentalities into its vortex, and if those mentalities are insufficiently equipped for the strain which will be put upon them, then the wisest plans of the minority will prove ineffectual.

How few are able to grasp mentally the significance of the present moment, or to visualize the intensely dramatic possibilities of the near future? How few are able to perceive that the War has, in the sense of destruction, set civilization back a century, and that it will be absolutely necessary to repair the wreckage as soon as possible after peace is declared? The emotional reaction of joy that will inevitably succeed the birth of peace will, for a time, subordinate every other public emotion. One can quite clearly visualize a condition of happy chaos that will laugh in the face of serious thought and be quite unable to appreciate the fact that grave danger still threatens civilization; that nothing short of collective intelligence and collective thinking will assure a sane future for democracy. The future needs thought as the human body needs food; it needs dynamic ideas and ideals, it needs effectively applied mental science, and it needs human understanding. The failure of the past to secure to the people a general high standard of living and social security which might leave man free to become aware of his higher mental self; this failure has been due to the absence of collective thought—the failure, in fact, of the average undeveloped mind. Let us examine this question closely. Great ideals and schemes for the betterment of mankind have been conceived and expressed by thinkers whose sole motive was the uplifting of their fellow men. They had no axe to grind—men like Ruskin, William Morris, Tolstoi, Emerson, and many others, whose life work was directed towards the elevation of mankind. These great men were not in themselves failures; they expressed their ideas very clearly; it is humanity that has failed, not the men of genius who have pointed a way to emancipation. Why have these mental pioneers been unable to produce a full and satisfactory result? Why has humanity failed to utilize the ideals of its great teachers? There is no excuse for humanity; *humanity has consistently refused to think; it has neglected its mind; failed to realize the importance of ideas, and, in so doing, has allowed the paralyzing forces of ignorance to overwhelm it.* False dignity cannot point a flaw in this argument; it is as clear as the sun in mid-heaven.

Thought, rightly directed and intelligently applied to the complex problems of human life, can alone lift the race beyond the devastating effects of mental apathy and intellectual inertia. We have neglected our brains; we have failed to apprehend the infinite power of mind, and we suffer in consequence. Then, it will at once be said, education is also a failure. What has education been doing all these years? What is wrong with our educational system that the average person is not, in the highest sense of the word, educated? The answer is, that educationists have been much too anxious to provide a utilitarian education; an education purposely designed to fit in with conventional ideas of life and with things as they are. Educationists have not properly appreciated the fact of individual psychology. Conventional education may

impart much valuable technical knowledge, and, at the same time, fail to draw out those vital qualities of personal initiative and individual thought which are alone able to develop the pupils' highest potentialities. The result of such education is not a mind alive to the colour and joyous possibilities of life, but a mind encumbered with a certain mechanical arrangement of facts that are, within limits, quite useful, but which are also narrowly restricted, and do not as a rule enable the individual to become intimate with the possibilities of his or her own unique personality.

The whole problem of the future, in which it is generally admitted that reconstruction shall be the most important task, is a problem which involves the mental response of the people to the idea of reconstruction in all its phases. People in all classes of society will need to think and analyse for themselves; they will have to discuss national affairs and bring their minds to bear intelligently upon the various aspects of social reconstruction. They will have to be mentally awake not only to their own personal interests, but also to the interests of others. The future will demand a clarified perception of right values and sane ideals; it will need clear, energetic brains and sensitive imaginations—mental qualities which do not develop without systematic exercise and rightly directed interest and concentration. The need for the healthy activity of these mental faculties exists increasingly, and the Pelman System of Mind and Memory Training has evolved side by side with this need. The Pelman System of mental education is nothing more nor less than a proved developer of every healthy and progressive activity of the human mind. There Training more likely to stimulate the latent powers of the unworld appear to be no other system of Mind and Memory developed brain and prepare it for the intense intellectual battles of the future. The Pelman System invariably produces that requisite mental vitality and keen perception that can alone prove successful in a world fighting for existence with ideas. The Pelman System is more scientific and more certain of its ground than any other system which claims to provide an incentive to thought and a stimulus to imagination. It has psychology for its basis, whereas conventional education regards psychology as a mere branch of mental science, and does not normally include it in the popular curriculum. This oversight has caused the failure of conventional education just as the recognition of the psychological basis of mental life has proved the success of the Pelman System.

Briefly, then, the coming of peace will demand collective thinking; it will demand the serious consideration of, and creation of, ideas; it will demand intelligence. Nothing less than efficiently educated brains will be qualified to deal with those supreme national issues which must affect the race generally. Nothing short of national mental education will be of any practical value in the enormous task of social reconstruction. Pelmanism will play a much greater part in the shaping of our national future than many of us imagine. The world cannot become safe for the people and for posterity until each individual unit in society fully realizes the possibilities of their own particular mentality and its power over the conditions of life which form its environment. The hopes which mental education holds out for the future are stupendous. There is no limit to the happy possibilities of the future if only humanity will collectively realize the divine potentialities of thought, and awaken to the necessity of creating a condition of human life which shall bless the children of to-morrow and justify the sacrifice and sorrow of to-day.

\* \* \*  
 "Mind and Memory" (in which the Pelman Course is fully described, with a Synopsis of the lessons) will be sent, gratis and post free, together with a full reprint of "Truth's" famous report on the Pelman System, and a form entitling readers of the EDUCATIONAL TIMES to the Complete Course for one-third less than the usual fees, on application to the Pelman Institute, 374 Pelman House, Bloomsbury Street, London, W.C.1.

BOOKS  
FOR  
TEACHERS

ART  
&  
HANDWORK

**HANDWORK AND GEOGRAPHY.** By G. PICKERING, F.G.S., Head Master of the Gurney Pease Memorial School, Dartington; and J. B. ROBINSON, F.R.G.S., Principal of the Great Yarmouth Summer School. With a Foreword by J. A. GREEN, M.A., Professor of Education in the University of Sheffield.

Most of this book is a handy guide, with numerous useful exercises to all the outdoor work which lies on the borderland between Mathematics and Geography, and forms an elementary introduction to Surveying and Geodesy. The second part is on similar practical and useful lines, and will be especially useful to those who wish to teach their pupils a little Astronomy. The models suggested are simple and eminently useful.

Part I, demy 8vo, 102 pp., 83 illustrations, 2/6 net.

Part II, demy 8vo, 140 pp., 112 illustrations, 3/- net.

**HANDWORK AND PRACTICAL ARITHMETIC.** By GEO. F. JOHNSON, Editor of "Educational Handwork," Inspector of Handwork, Liverpool Education Committee. With an Introduction by J. A. GREEN, M.A., Professor of Education in the University of Sheffield.

The work is divided into seven parts, the whole forming a continuous treatise on the fundamental principles of Arithmetic, Geometry, and Mensuration. The first four parts are contained in the first volume, and the last three parts in the second volume.

Demy 8vo, illustrated; vol. I, 128 pp., 3/- net. Vol. II, 106 pp., 2/6 net.

**SIMPLE LESSONS IN COLOUR. I.—COMMON OBJECTS.** By HERBERT A. RANKIN, Art Master, Silver and Bronze Medallist.

A Practical Manual suitable for all who would master the elementary principles of colour as applied both to animate and inanimate objects. Demy 8vo, cloth, 160 pp., 36 full-page coloured plates, 5/- net.

**SIMPLE LESSONS IN COLOUR. II—FLOWERS.** By the same Author.

In demy 8vo, cloth gilt, 184 pp., with 40 full-page coloured plates. Price 5/- net.

**PENCIL DRAWING.** By the same Author.

This Manual is addressed especially to teachers learning the art of teaching drawing, and should prove of great assistance in removing practical difficulties, and also give considerable insight into the principles underlying the rules and conventions of the subject.

In demy 8vo, cloth gilt, 153 illustrations, 220 pp. Price 5/- net.

**PASTEL WORK.** By the same Author.

The plates chosen to illustrate the scheme in this manual are of such articles as can easily be obtained at any time of the year.

In demy 8vo, cloth, 160 pp., with 32 full-page colour plates. Price 5/- net.

**PASTEL WORK (FLOWERS).** By the same Author.

The developments necessary in the application of colour to plant life are fully described. A seasonal course of nature work with crayons has been fully provided for.

In demy 8vo, cloth, 188 pp., with 36 beautiful full-page coloured plates. 5/- net.

**THE TEACHING OF COLOUR.** By the same Author.

The primary aim of the present volume is to present colour problems, especially in the observational exercises, in as simple a manner as possible.

In demy 8vo, cloth gilt, 178 pp., with 55 beautiful plates in colour and black and white. 5/- net.

**BOOK-BINDING AS A HANDWORK SUBJECT.** By J. HALLIDAY, Handwork Master, County Technical Secondary School, Workington; Lecturer in Handwork, Cumberland County Council; Member of the Staff, Brighton Summer School, &c. With a Foreword by Canon H. D. RAWNSLEY, Hon Secretary of the Secondary Schools Association, &c.

Demy 8vo, cloth, 74 pp., with 58 illustrations and diagrams. Price 2/- net.

**WOOD, WIRE AND CARDBOARD.** By J. G. ADAMS and C. A. ELLIOTT. With a Foreword by R. HUDSON, M.A., Principal of St. Mark's Training College, Chelsea, S.W.

Demy 8vo, cloth, 116 pp., with 62 black and white illustrations, 2/6 net.

**THE SALARIES REPORT.**

THE following is the Summary of Conclusions and Recommendations contained in the Report of the Departmental Committee on Salaries in Secondary Schools.

INTRODUCTORY.

The problem of fixing salaries payable to teachers in institutions for higher education and of determining the periodical increases to which they should be liable is comparatively narrow, and from some points of view exceedingly technical. But even when, as in the present case, it is separated from the question of the amounts of the salaries, and the sources from which they should be raised, it depends for its solution on considerations that cover the whole field of education, and therefore affect the life of every individual in the country, and have a direct bearing on our national life as a whole. Thus, while we hope that we have kept within our bounds, we have been fully conscious of the importance of the duties allotted to us. A national system of education may be indefinitely divided and subdivided; but it must always be regarded as an organic unity, the welfare of which depends on the welfare of every recognizable division or sub-division. All education depends on teachers, by whatever name they are called, and the teachers engaged in higher education occupy at least as important a position as any members of the teaching profession. Secondary schools, for example, will always have a great influence on the teaching in elementary schools, while the great number of pupils for whom they provide instruction will, if their course of tuition is wisely directed, enable them to exercise a more extensive influence on the education of the country at large than even the Universities. Their function in the national system is to educate those who are to take leading positions in the commerce, industry and public service of the country, to all of whom the kind of education described as secondary is a prime necessity; and the efficiency of the whole system of higher education depends upon the proper performance of this function. In these circumstances it is a matter of grave importance that, even before the war, there was a marked deficiency in the provision for higher education as regards accommodation and teachers; and this deficiency, it must be remembered, affects pupils who are to a great extent selected on account of exceptional promise. Nor is it only a question of accommodation and teaching, for in the course of our inquiry it has been brought home to us that the teaching services are experiencing increasing difficulties in attracting

a reasonable share of the young men and women who give evidence of outstanding ability.

We have assumed that hereafter these difficulties will be remedied—that is, that the conditions of the teachers' employment will be such that the higher education service will attract a greatly increased number of young men and women, possessing as high qualifications as those required for any other service in the country, who will have made use of opportunities for instruction and training which do not now exist. This assumption implies a change in the financial conditions of the service which the Prime Minister's Committee on the position of science in our educational system\* have described as a "revolution." We have no reason to question the suitability of the phrase; we have indeed assumed that the change so described will affect the questions of salary which we have to consider. The description is justified by the fact that the pecuniary resources at present available for higher education have neither been on a scale sufficient to produce the desired result, nor been allocated on a system elastic enough to suit the very diverse needs of individual schools. Further than this we need not go, as we are not asked to consider the sources from which the amounts required for the improvement of existing salaries should be provided, and we prefer therefore not to treat of the matter generally. But we have no doubt that a very great increase of salaries is necessary, and that it cannot be provided unless there is a substantial increase in the Exchequer contributions in aid of higher education, and a considerable change in the methods by which Exchequer aid is at present distributed.

The subject of our inquiry being the principles which should determine the fixing of salaries for teachers in four different kinds of institutions, namely, secondary schools, technical schools, schools of art and training colleges, we have thought it advisable to begin by touching on a few salient characteristics of each of these.

#### SUMMARY OF CONCLUSIONS AND RECOMMENDATIONS.

##### SECONDARY SCHOOLS.

###### *General.*

1. We consider that the advantages of a scale of salaries for assistant teachers in secondary schools outweigh the disadvantages, and that the latter can be avoided by introducing a proper degree of elasticity in the application of the scale. The main end is to satisfy the reasonable expectations of the kind of men and women who are wanted in the service, and for this purpose there must be, apart from promotion to headships, prospects of financial advancement in the form of posts of special responsibility open to those who render specially valuable service.

2. We recommend that a minimum initial salary for teachers of the graduate class in all secondary schools in receipt of public money should be fixed by the Central Authority, and we further recommend that a minimum amount be prescribed at a later stage in the teacher's career.

3. We recommend that the scale of a secondary school should be so arranged that teachers will receive a substantial salary at the age of 32 or 33, with increments continuing up to the age of about 42 or 43. We suggest that the normal arrangement should be that increments should occur annually, and that £10 may be a convenient minimum.

4. We recommend that increments should be automatic, subject to reasonable conditions being fulfilled as to the quality of the service rendered, and provision to this effect should find a place in the contract made between an Authority and a teacher, wherever the latter is employed on a scale. The Authority alone is responsible for the non-payment of an increment. An increment should not be withheld till the person to whom it is normally due has had any charges made against him fully explained, and has had every reasonable opportunity of making his defence against them before the proper body.

5. The salaries of both men and women must be adequate. Equality of pay for the two sexes would, in existing circumstances, lead to one being underpaid or the other overpaid. We hope that school authorities will lead the way in recog-

nizing any changes that may occur in women's economic position. We should be glad to see the salaries of the two sexes in the first few years of service approximate as closely as possible; in present social and economic conditions differences in the latter stages of service seem to be inevitable.

6. Each Authority should decide for itself how far to allow for abnormal cost of living in any district.

###### *Assistant Teachers of the Graduate Class.*

7. We consider that, as a rule, teachers in secondary schools, other than teachers of special subjects, should be graduates of a University or possess qualifications equivalent to graduation. The possession of a high degree, or other special qualification of a scholastic character, may be recognized by placing its holder at a point on the scale above that which he would otherwise occupy.

8. We regard professional training as a highly valuable qualification, and recommend that one year's post-graduate training should count as two years of service in fixing the initial position of a teacher on the scale.

9. It is desirable that teachers should be able to move from school to school and from area to area without undue loss of credit for past services, and this applies particularly to teachers at an early stage in their career. We recommend that in fixing the place of a new teacher on a scale a year's experience should count as a year of service up to ten years. But any rule framed for this purpose must be as elastic as possible.

10. If residence involves additional duties, compensation, either in money or in kind, or in reduction of teaching hours, should be given to the holder of a resident post.

11. We recommend that in framing a scale no distinction in salary should be made on the basis of the subject taught. Outside competition may make it necessary for economic reasons to attract a teacher from a competing employment, but this should generally be done by placing him at a point on the scale higher than he would otherwise occupy.

12. We are of opinion that there are no educational reasons why the size of a school should, in itself, lead to a difference in the salaries paid to the assistant staff. We hope that salary scales will not be so arranged as to suggest that the quality of the teaching expected in a small school is inferior to that expected in a larger one. We should be sorry to see distinctions made in the scales of secondary schools on the basis of differences in the character of the schools. Differences in the financial resources of different schools necessarily lead to differences in salaries; but we consider it important that new financial arrangements should be made to enable the poorer and smaller schools to fare better in the competition for good teachers than is possible under present circumstances.

13. Heads of departments and assistants performing special duties should be remunerated by additions to their salary. This may be provided for in several ways. We deprecate any addition to the normal scale that is not accompanied by the discharge of definite functions.

14. We consider that where an Authority or governing body offers a high rate of pay it may, under certain conditions, properly undertake a review of a teacher's past service at a comparatively advanced point on the scale, to see if he deserves to proceed further. We deprecate any rule being made as to the proportion of the teachers who should pass such a review.

15. The period of probation on first appointment should be normally for one year, in which case it will not affect the teacher's place on the scale. If probation is required in the case of a teacher who has had experience in another school it is probable that a shorter period will be sufficient.

###### *Teachers of Special Subjects.*

16. Teachers of special subjects, which include art, music, physical exercises, domestic subjects, handwork, and commercial subjects, should be on the normal scale if their formal qualifications or their merits as teachers entitle them to be treated as graduates. The new Teaching Certificate of the Board of Education for teachers of art, and the Full Associateship of the Royal College of Art endorsed with a Teaching Certificate may be considered as formal qualifications equivalent to graduation. We hope that in other subjects

\* Report of the Committee appointed by the Prime Minister to inquire into the Position of Natural Science in the Educational System of Great Britain [Cd. 9011], 1918, Paragraph 73.

formal qualifications deserving the same recognition may be established in the near future. If a teacher of special subjects is not placed on the normal scale it is reasonable that his remuneration should be fixed by a scale. A teacher whose services prove to be exceptionally valuable should have a prospect of coming on the normal scale.

#### *Head Masters and Head Mistresses.*

17. The salaries of head masters and head mistresses should generally be fixed by personal scales. The period should be short, perhaps five years; the total increase should be considerable; we incline to the view that the increments should be annual. This should not preclude the possibility of an increase of salary in special cases; and where exceptional services to the school are contemplated a promise that an increase of salary will be considered at a later period may be useful. In the absence of a scale there should be an undertaking that an increase of salary will be considered within some definite period.

18. There is no reason why the salary of a head master or head mistress should bear any definite relation to that of an assistant, except that it should be considerably higher than that which any assistant in the school can reach. The two principal matters that should be taken into consideration in fixing the salary of a head master or head mistress are the size of the school and the character of the work required to be done in the school.

19. We deprecate the system by which a head or an assistant makes a profit by providing for boarders.

20. We recommend that payment of a head by capitation fees should be discontinued, but this can only be done gradually.

#### *Grace Terms.*

21. The scale should show that power is reserved to grant leave of absence, without loss of remuneration or prospects, for purposes of study or research, to teachers who have completed a certain term of service.

#### JUNIOR TECHNICAL SCHOOLS.

22. In junior technical schools we recommend that full-time assistant teachers who are graduates, or who have qualifications equivalent to graduation, should be paid on a scale which should be the same as that of a secondary school; others should be placed on personal scales appropriate to their qualifications and the nature of their responsibility. Artisan teachers should be paid as in technical schools. Head teachers should be paid as though they were head teachers in secondary schools of the same size and of a similar leaving age. If the junior technical school forms part of a larger institution, and the status of the head is that of a head of department, his salary should be arranged accordingly.

#### TECHNICAL SCHOOLS AND EVENING CLASSES.

23. In technical schools we recommend that full-time assistant teachers of senior and advanced students, who are graduates or have qualifications equivalent to graduation, should be paid by scale at as high a rate at least as is paid in secondary schools; the age at which, and the increments by which, they reach their normal maximum should be similar to those obtaining in secondary schools. There will be exceptional cases in which higher remuneration will be necessary.

24. Where a teacher's qualifications consist of long works experience and high technical knowledge, the question of salary may be determined by what will induce him to leave his occupation, and this consideration may affect the arrangement as well as the amount of his salary; otherwise we consider that the character of the scale should be similar to that of a secondary-school teacher.

25. The initial salaries of artisan teachers will be settled in the main by the competition with industry. Apart from this we suggest a personal scale. The possibility of promotion to the second of the above groups of teachers should always be open to the artisan teacher of suitable qualifications.

26. Heads of departments should be paid by a short, steep scale. There should be a substantial increase in remuneration when an assistant becomes head of a department.

27. Principals should be paid according to a short, steep

scale, the amount depending on the size and character of the institution.

28. The qualifications and circumstances of part-time teachers vary so much that we cannot lay down any principles for fixing the amounts of their salaries. In order to retain the services of a teacher who is doing good part-time work it may be advantageous to increase his salary two or three times at intervals of two or three years.

29. We see no particular advantage or disadvantage in the terminal or sessional method of paying part-time teachers as compared with the system of payment by the hour or by the meeting. A sessional payment may, however, be a more convenient arrangement if a scale for part-time teaching is contemplated.

#### SCHOOLS OF ART.

30. Teachers in schools of art who hold the Full Associateship of the Royal College of Art, endorsed with a teaching certificate, or the Board's new Teaching Certificate for Teachers of Art, should be dealt with like full-time assistant teachers in technical schools who are graduates or hold similar qualifications. Other holders of the Full Associateship and holders of the Art Master's Certificate should be dealt with individually according to their merits and placed on personal scales; very many of them will deserve the treatment accorded to the graduate class. Teachers who have made some progress towards obtaining a full teaching qualification or have obtained the Associateship of one of the schools of the Royal College should be treated like non-graduate teachers in secondary schools. The experienced artist or craftsman who becomes a full-time teacher should be placed on a personal scale. The treatment suggested for full-time artisan instructors in technical schools is appropriate for instructors of a similar type in schools of art.

31. The salaries of principals of schools of art and of the heads of art departments in technical schools are subject to the observations we have made in relation to principals and heads of departments in technical schools.

#### TRAINING COLLEGES.

32. We recommend that lecturers in training colleges should be paid according to scales. A possibility of interchange between the lecturers in colleges and the teachers in schools is desirable. This would be promoted by a co-ordination of their scales; thus, for example, the emoluments of ordinary posts in colleges, while more attractive than those of ordinary posts in schools, might be approximately equal to those of higher posts in schools. The scale for training college lecturers should be framed so as to attract not only teachers of some experience, but teachers of exceptional merit.

33. We recommend that principals of training colleges should have personal scales, short and steep in character. In fixing the salary of a resident principal, allowance should be made for the extended duty and heavy responsibility involved by residence.

#### TRAINING SCHOOLS FOR INTENDING TEACHERS OF DOMESTIC SUBJECTS.

34. Full-time lecturers in training schools for intending teachers of domestic subjects should be paid according to a scale reaching a normal maximum at the same age as that provided in other scales. The scale should be such as to attract good teachers from schools. The principles that apply to graduate lecturers in a training college should apply to graduate lecturers in a training school.

#### APPLICATIONS OF NEW SCALES TO EXISTING TEACHERS.

35. In placing an existing teacher on a new scale it should be borne in mind that the process of placing him at the point appropriate to the length of his service must not be too long drawn out; the teachers whose cases are most urgent, in particular those with a long record of good service at low salary, should have priority in respect of the date or the amounts of advances which are given; there should be no avoidable delay in giving to every teacher some immediate and substantial instalment of any intended advance.

36. In making scales, personal or general, for non-graduate teachers, though there may be good reasons for making the

normal increments in their scales the same in any one school, it is not necessary that they should all proceed to the same maximum, or that the salaries at which they are placed on their new scales should be regarded as made up of a common initial salary with allowances at a uniform rate in respect of their years of service.

The Report is signed by the Chairman, Sir Harry L. Stephen, and by all the members. Dr. Brackenbury and Mr. Reynolds submitted each a reservation.

## TEACHERS AND THE WHITLEY REPORT.

"Give me the schools of the world and I would make a millennium in half a century." So says the hero of Mr. Wells's latest novel. And Lord Sydenham said not long ago that those who remembered the simple kindly people of the Southern German States forty or fifty years ago must have been astonished at the radical change the War had revealed. "The utilization of a large system of education for political purposes has," he argued, "enabled the ruling classes of Germany to Prussianize the whole country within two generations. . . . The lesson we derive from this sad experience is that the power wielded by education is enormous for evil, but it must be equally powerful for good, properly handled."

Mr. Fisher's Act has gone a long way towards providing a national system of education for England. The power wielded by the Education Authorities, central and local, will indeed be powerful for good when the Act comes into force if only, as Lord Sydenham said, it is properly handled.

In Universities the education is directed by Senates, Boards of Faculty, and Boards of Studies. In those great private institutions that we know as "public schools," and in other less distinguished private schools, the education is directed by head masters, under the influences of conferences or associations of head masters, and more or less subject to the requirements of the Universities. In short, it is the teachers—or some of them—who control the education given in autonomous educational institutions. Governing bodies help with administration and finance, but with education they commonly concern themselves very slightly, if at all.

On the other hand, teachers have hitherto exercised but little influence on the public educational systems of this country. But, if the public Authorities that control this education are to exercise their growing power to the best advantage, they can hardly do so without the increasing help of the teaching profession. The Teachers Registration Council—"representative of the teaching profession"—was established in 1912. During its short life it has rendered valuable service to English education by preparing a register of teachers and by providing a teachers' parliament. But if the teaching profession is to take an effective part in directing a new national system of education, it can best do so by co-operating with the existing Authorities on the lines indicated by the Whitley Report. The initiative will probably have to come from the teachers. The Teachers Registration Council can provide their side of the "Joint Industrial Council," but provincial councils of teachers are needed to provide their side of the "District Councils."

Accordingly a new step has been taken by the formation of the first provincial council, representative of the teaching profession in Lancashire and Cheshire. The council consists of two representatives of each of the Universities—Manchester and Liverpool—and of the teachers' associations\* in these counties. The constitution adopted provides for at least three

\* Associations sending representatives to the first meeting of the council are, besides the two Universities:—The Head Masters' Association (Twelfth Division); the Head Mistresses' Association (Lancashire, Cheshire, and North Staffs); the Association of Technical Teachers' Institute (Lancashire Branches); the Assistant Masters' Association (Lancashire, Cheshire, and Westmorland); the Assistant Mistresses' Association (Lancashire, Cheshire, and North Staffs); the National Union of Teachers, (a) Cheshire Branch, (b) Lancashire Branch; the National Art Masters' Society (Lancashire Branch); the Private Schools Association (Lancashire Branches); the Association of Teachers of Domestic Subjects (Lancashire Branches); the Music Teachers' Association (Manchester and District Branch).

meetings each year of representatives of all grades of teachers. "so that they may become more fully acquainted with each other's work and their mutual relations to problems of general educational importance." "They will thus," the constitution goes on to state, "have the opportunity of stating their aims, the special difficulties that confront them in their respective spheres of work, and their view of their own position in an educational scheme. It is hoped that such a body will become sufficiently well informed to give collective weight to expressions of individual needs and also to develop a common educational policy based on the experience of the teachers themselves."

It is anticipated that other provincial councils will be quickly set up elsewhere. Their establishment throughout the length and breadth of England will not only enable the teachers to exercise a profoundly beneficial influence upon the organization of local education, but will also be the means of securing a greater measure of life and liberty for the teaching profession. Many other advantages are likely to result from the formation of such federal councils.

First, their work may well be complementary to that of the Teachers Registration Council, and they may form the avenues through which that council may receive and disseminate information. They may, in fact, serve as intermediaries between the national council on the one hand and local councils—corresponding to the "Works Committees" of the Whitley Report—representative of the teaching profession in any one local education authority's area. With the help of these local councils the provincial bodies may very materially assist in securing that executive effect is given to the decisions of the national council.

Second, provincial councils representing teachers from many different types of school and college, as well as from several different local education authorities' areas, will be able by their advice to facilitate the co-ordination of education throughout a wide district. The provision of the continuation schools required by the new Education Act, the organization of an adequate scholarship system affording equal opportunities of advancement to boys and girls of equal ability in whatever part of England they happen to have been born, and the supply and training of teachers are problems that suggest themselves in this connexion.

Third, provincial councils will, through their committees, be able to investigate particular educational problems far more effectively than teachers have found it possible to do in occasional short conferences. Moreover the taint of expediency or self-interest which has sometimes characterized the work of individual teachers' associations will be absent from a federation possessing as wide an outlook as that of the provincial councils in question.

In short, these provincial teachers' councils, of which the first met in Manchester on Saturday, October 26, should have a unique opportunity of helping Mr. Fisher and the local education authorities first to provide, and then properly to handle, a national system of education that will develop a population *Al* not only in body, but also in mind and spirit.

"JULY 18.—In the school established in Newgate there were some time ago some sixty or seventy boys, who had been convicted of various crimes, some of whom were then under sentence of death. There were but few of them who could either read or write, and not more than two or three who had been brought up in parochial schools, in connexion with the National Society. A clergyman who interests himself in the present proceedings for the reformation of early depravity was desirous to ascertain the character of their respective parents, and was accordingly induced to call upon them, which he did in different parts of the metropolis. So far from meeting with anything like ill-usage, which he had in some measure anticipated, those with whom he conversed, on the contrary, treated him with respect, and when he mentioned the pains that were taken with their children in prison, they seemed to be impressed with a strong feeling of gratitude. Most of the parents talked without any reserve on their past and present mode of living, and acknowledged that, almost without any exception, they existed by depredation and plunder, and were persons who, having no value for religion themselves, were content that their children should live without any in the world, and who even, in some instances, trained up and educated their offspring in the same schemes of wickedness and deeds of infamy which they daily practised on the public."—(From the "Times" of 1818.)

# MACMILLAN & CO.'S BOOKS.

Fourth Edition, thoroughly revised.

**An Elementary Treatise on Curve Tracing.** By PERCIVAL FROST, Sc.D., F.R.S. Fourth Edition. Revised by R. J. T. BELL, M.A., D.Sc., Lecturer in Mathematics, University of Glasgow. 12s. 6d. net.

**Solutions of the Examples in "A Treatise on Differential Equations."** By A. R. FORSYTH, Sc.D., LL.D., Math.D., F.R.S. 10s. net.

**Elementary Engineering Papers for Naval Cadetships (special entry) 1913-1917.** Edited by R. M. MILNE, M.A. 1s. 8d. net.

**Alternating Current Electrical Engineering.** By PHILIP KEMP, M.Sc. Tech. (Vict.), A.M.I.E.E. Illustrated. 17s. net.

*The Times.*—"Designed to cover the syllabus for the Grade II (A.C.) Paper of the City and Guilds examination; and may be used for the B.Sc. examinations in electrical engineering, supplemented by more specialized treatises."

**A Textbook of Physics for Use of Students of Science and Engineering.** By J. DUNCAN, Wh.Ex., M.I.Mech.E., and S. G. STARLING, B.Sc., A.R.C.Sc. 15s.

Also in Parts:—**Dynamics, 5s.; Heat, Light, and Sound, 6s.; Magnetism and Electricity, 4s.; Heat, 3s. 6d.; Light and Sound, 3s. 6d.**

*The Electrician.*—"We have no doubt that this treatise will prove of the greatest help to students of either of the types indicated in the title page."

**Practical Chemistry for Intermediate Classes.** By H. B. DUNNICLIFF, M.A., B.Sc., F.C.S. 5s.

**Alcohol and Life: A Manual of Scientific Temperance Teaching for Schools.** By J. A. HUNTER, M.B. Illustrated. Sewed, 1s.

Also in Three Parts:—Part I, Alcohol and the Living Cell. Part II, The Effects of Alcohol on Body and Brain. Part III, The Effects of Alcohol on the Individual, the Family, and the State. 4d. each.

*Education.*—"As part of their needful character-training children should be afforded every opportunity of acquiring knowledge relating to the action of alcohol on the human system. . . Various diagrams and illustrations help to make the book not only instructive but also interesting to the young and growing mind."

## W. & A. K. JOHNSTON'S MAPS, &c.

### WALL ATLAS OF EUROPEAN HISTORY.

**An Entirely New Series of History Maps.**

Designed to show at a glance the Chief Political Changes and National Movements from the **FORMATION of the ROMAN EMPIRE to the BEGINNING of the GREAT WAR, 1914.** 24 Maps. Size 40 x 30 inches. Cloth, Rollers, and Varnished. 7s. 6d. net each.

Or any Six Selected Maps mounted as a Wall Atlas, on Cloth and fastened together on one Roller with Metal Rims, 42s. net.

*Detailed Prospectus, containing List of Maps, &c., post free on application.*

### "IMPERIAL" SCHOOL WALL MAPS.

16 Maps in Series. 72 by 63 inches. Cloth and Rollers, Varnished, 27s. 6d. net.

### LARGE SCHOOL WALL MAPS.

36 Maps in Series. 50 by 42 inches. Cloth and Rollers, Varnished, 14s. net each.

### SMALL SCHOOL WALL MAPS.

22 Maps in Series. 34 by 28 inches. Coloured, Cloth and Rollers, Varnished, 6s. net each.

### BATHY-OROGRAPHICAL WALL MAPS.

50 by 42 inches. Mounted on Cloth, Rollers, and Varnished, 14s. net.

Each Series includes Africa, America, Asia, Europe, England, Scotland, &c.

\* \* \* Complete List post free on application.

### The Doctrines of the Great Educators.

By ROBERT R. RUSK, M.A. (Glasgow), B.A. (Cambridge), Ph.D. (Jena). 5s. net.

CONTENTS.—Plato. Quintilian. Elyot. Loyola. Comenius. Milton. Locke. Rousseau. Pestalozzi. Herbart. Froebel. Montessori.

### Tales from Indian History.

With Introduction, Notes, &c. By A. S. ROE, author of "Stories from Chinese History," &c. Illustrated. 1s. 6d.

[*English Literature for Secondary Schools.*]

### English Exercises for Middle Forms.

By J. H. FOWLER, M.A. Part I. 2s. 6d.

*The Schoolmistress.*—"The book is exceedingly useful, and should be valuable to teachers of middle forms."

### Essentials of Practical Geography.

By B. C. WALLIS, B.Sc. (Lond.), F.R.G.S. With Maps and Illustrations. 4s. 6d. [*Practical Modern Geographies.*]

*The Journal of Education and School World.*—"This is an excellent book. . . Altogether Mr. Wallis's new book should undoubtedly not only stimulate the self-activity and initiative of the taught, but also save the time and energy of the teacher."

### The Pupils' Class-Book of Geography.

**Europe.** By ED. J. S. LAY, author of "Constructive Work," &c. With Maps. Sewed, 1s.

*The Scottish Educational Journal.*—"This little book is one of a capital series of simple textbooks on geography suitable for senior classes and supplementary."

### Contouring and Map-Reading.

By B. C. WALLIS, B.Sc., F.R.G.S. Sewed, 2s.

\* \* \* Suitable for Schools and Officers' Training Corps.

### Macmillan's Geographical Exercise Books. Physical Geography.

With Questions by B. C. WALLIS, B.Sc. Sewed, 1s. 6d.

### History. The Quarterly Journal of the Historical Association.

Edited by Professor A. F. POLLARD, M.A., Litt.D. Price 1s. net. Annual Subscription, post free, 4s. 6d. net.

CONTENTS FOR OCTOBER.—The Origins of France, Prof. F. M. Powicke; An Italian Historian, H. M. Beatty, LL.D.; The Teaching of History in South African Schools, Alan F. Hattersley; Historical Revisions: VIII, "No Taxation Without Representation," A. F. Pollard.

### HISTORY'S BACKGROUND.

By J. S. TOWNSEND, B.A., and T. FRANKLIN, A.C.P., A.R.S.G.S.

With Maps. 6s. net; or Books I-III, 2s. net each.

### Book I.—EURASIA, including the Mediterranean Region.

### Book II.—The AMERICAS and the Growth of the British Empire. From Elizabethan Times to the Present Day.

### Book III.—THE BRITISH ISLES.

Correlated with History to the Present Day.

### OROGRAPHICAL ATLAS of the WORLD

10 by 7½ inches. With Index to 6,000 places. Stiff Boards, Cloth Back, or in Limp Cloth, 2s. net.

WITHOUT INDEX, 1s. 6d. net. Tough Paper Covers, 1s. net.

### OROGRAPHICAL HAND MAPS for

**Test Purposes.** Varying tints of brown, green, and blue. 16 in Set. 1d. net each.

### THE "NEW ERA" SCHOOL ATLAS.

10 by 7½ inches. Bound in Limp Cloth, with 24-page Index. 1s. 9d. net; with 8-page Index, 1s. 4d. net; without Index, 1s. 3d. net. Bound in Strong Paper Covers, with 8-page Index, 1s. 1d. net; without Index, 1s. net.

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.2.

## NOTES ON CORRESPONDENCE TRAINING.

### POSSIBILITIES.

Correspondence Training places the possibility of preparation for higher qualifications before every student in the land. Preparation is given for Certificate, Preliminary Certificate, L.L.A., A.C.P., L.C.P., Froebel, Degree Examinations, Languages, Science and Art, Matriculation, Oxford and Cambridge Locals, &c., &c. These and many others are placed within reach of all by the NORMAL CORRESPONDENCE COLLEGE.

### ADVANTAGES.

Correspondence training for qualifications neither demands attendance at College for long, set hours, nor does it interfere with the pupil's work or residence. It is within the reach of all—even of those in the most far-away villages—enabling them to qualify for better appointments. The training of the NORMAL CORRESPONDENCE COLLEGE, given by an expert staff of tutors, is so clear, systematic, and thorough that success is assured to the diligent student.

### THE RESULTS.

Correspondence training for higher qualifications has enabled thousands of students, student-teachers, and teachers to obtain good appointments and promotion. More than 5,000 Distinctions and Honours have been won at Public Examinations by Pupils of the NORMAL since 1907, and what the NORMAL has done for thousands it will do for you. The call of the future is for qualified teachers. Prepare now to improve your position by becoming a student of the NORMAL.

Write to-day for "THE NORMAL GUIDE TO SUCCESS," which will be sent free to readers of "The Educational Times."

### EXAMINATIONS FOR WHICH THE NORMAL PREPARES.

College of Preceptors.  
A.C.P. and L.C.P.  
Professional Preliminary.  
County Council Scholarships.  
Pupil Teachers.  
Preliminary Certificate.

Certificate.  
Oxford Locals.  
Cambridge Locals.  
Froebel.  
L.L.A.  
Central Welsh Board.

Matriculation.  
Degree Examination.  
Languages.  
Music.  
Science and Art.  
Other Qualifying Exams.

Single Subjects.—A pupil may join the Normal for instruction in any single subject.

## **NORMAL CORRESPONDENCE COLLEGE,**

47 Melford Road, East Dulwich, London, S.E.22, and 110 Avondale Square, London, S.E.1.

# THE COLLEGE OF PRECEPTORS. CERTIFICATE AND LOWER FORMS EXAMINATIONS MIDSUMMER, 1918.

## PRIZES.

[Bracketing of names denotes equality.]

### SENIOR.

#### General Proficiency.

- |  |  |
|--|--|
| 1. Dunn, E. S.<br><i>(Iabister Prize.)</i> | St. Joseph's College, Dumfries.          |
| 2. Hall, T. B.<br><i>(Pinches Prize.)</i>  | Osborne High School, West Hartlepool.    |
| 3. Lamb, F. C.<br><i>(Hodgson Prize.)</i>  | Sir Josiah Mason's Orphanage, Erdington. |

#### English Subjects.

BLOOMSBURY SQUARE, LONDON, W.C.1.

## LECTURES FOR TEACHERS

Forty-sixth Annual Series: Second Course.

### CURRENT CHANGES IN EDUCATION

By JOHN ADAMS, M.A., B.Sc., LL.D., F.C.P.,

Professor of Education in the University of London.

Whether we like it or not, we are faced with certain important changes in educational theory and practice that must seriously affect the life and work of professional teachers. It is the purpose of this course to indicate these changes, to explore their effects and to suggest means of meeting the demands they will make on those whose duty it is to carry on the education of the country. However drastic the coming changes, the present system will not be entirely swept away. It will, therefore, be the business of the lecturer to correlate what is with what is to be, and to illustrate the changes in English education by what is going on in the schools of other countries where similar developments are taking place under somewhat different conditions. He will make a point of keeping the lectures in as close touch as possible with the practical and the practicable.

#### SYLLABUS.

I. (Oct. 3.) *The Limits of Possible Change.*—Implications of "transition time," "parting of the ways" and similar phrases; the Heraclitean flux; stability underlying the flux; determining influence of the past; the possibilities of educational evolution: changes from within the profession and from without: real changes and apparent changes: dangers of love of change as such: present restlessness of the profession: its causes and probable consequences: the limitations and responsibilities of the individual teacher.

II. (Oct. 10.) *Changes in Organization.*—Rearrangement of responsibilities between Heads of schools and school governors: recognition of the school as an organism: corresponding need for organization to be determined from within: loosening of tradition: diminishing importance of curriculum in determining organization: the staff hierarchy: form-master *versus* specialist: increasing complexity of the interaction of sides, sets, houses and other units of organization: the striving after simplicity.

III. (Oct. 17.) *School Buildings.*—Evolution of our present school architecture, elementary and secondary: the psychology of the corridor and the glass door: hall and classroom: Wirt's revolt against "a seat and a desk for each pupil": limitation of classroom accommodation: correlation between teaching and school structure: peripatetic teaching: over-emphasis on stone and lime: teacher's power of manipulating school space: tendency towards less permanent school buildings: changing views about school sites.

IV. (Oct. 24.) *The New Discipline.*—Various meanings of the term *discipline*: discriminated from *organization*: undue emphasis on one aspect of discipline: basis of teacher's authority: nature of power of control: the "discipline master": so-called "free" discipline: the Montessori ideal: the Prussian: discipline evolved among the pupils themselves: self-government: relation to prefect system and to honour system: the new discipline combines the ideals of control and training.

V. (Oct. 31.) *Changed Social Function of the School.*—School ceasing to be an institution apart: it is gradually being assimilated as part of the general social system: school as social centre: civic correlation in Gary system: increasing use of school buildings for general social purposes: implications of the nursery schools and the "motherly person": extension of corporate spirit to the elementary schools: development of the "common school" ideal, and the results that must necessarily follow.

VI. (Nov. 7.) *The New Views on Play in Education.*—In some ways a reversion to an older type of education: two directions (a) towards systematized play in schools, (b) towards a lighter way of dealing with school subjects, as in Mr. Caldwell Cook's *The Play Way*: in organized games play becomes work: play is no longer a subsidiary matter: contrast between public schools and others: playgrounds contrasted with playing fields: controversy about teaching play: place of play in the school curriculum: function of the play-master.

VII. (Nov. 14.) *Changes in Curriculum.*—Nothing specially new in fact of change here: curriculum always in a state of flux: origin and development of current curriculum: the principle of balance: "knife and fork studies": cultural studies: the immanence of Formal Training: the present revolt against "bookishness": danger of too strong recoil: the boy-scout ideal: the vocational ideal: claims of the modern social reformer: the curriculum as a datum in the teacher's problem: his freedom within the limits set by the educational authority.

VIII. (Nov. 21.) *Changes in Methods of Instruction.*—New view of the nature of instruction: information-mongers: standardizing of methods: pure didactics going out of favour: growing preference for the various dialectic methods: strange recrudescence of lecturing in the teaching of certain school subjects: increased recognition of the pupil's point of view: paleo-centrism does not imply neglect of subject-matter, but a demand for proper correlation: new methods marked by a recognition of the organic unit of knowledge.

IX. (Nov. 28.) *Changes in the Use of Textbooks.*—Origin of textbooks: at first purely logical, taking no account of reader's special needs: textbook held teacher in bondage: revolt against book as supreme authority: its function as an adjunct to teaching: relation of pupil's class-notes to the textbook: pupil as textbook maker: attempts at standardizing textbooks by associations of teachers: need for various types to meet different cases: anomalous position of private publishers dominating the production of textbooks.

X. (Dec. 5.) *Changes in Class Manipulation.*—Class hitherto always taken for granted: economic justification for teaching by classes: class always of the nature of a compromise: the "death knell of class teaching": positive advantages of class teaching: distinction between a class as a teaching unit and as an organization unit: modern tendency to emphasize the organization aspect: resulting compromise of combining the two aspects, with an increasing bias towards private coaching of individuals organized into suitable groups.

XI. (Dec. 12.) *Changes in Examination and Inspection.*—Origin and development of school examinations: double test (a) of pupils, (b) of teachers: police aspect of examination and inspection: examinations are being supplanted by inspection: examinations used for two tests (a) for attainments, (b) for capacity: increased demand for tests of intelligence: development of the practical and oral examination: co-ordination of examination results with the school record: demand for the training of examiners and inspectors.

XII. (Dec. 19.) *The New Teacher.*—Types of teacher must change with the new developments: two conflicting movements (a) towards more definite professionalism, (b) towards the ideal of social service: increasing solidarity of the teaching craft: effects of increased complexity of professional training: the development of *arcana*: the "direct teacher" and the educational middle-man: the type of personality the public will insist upon having in its teachers: inevitable rise in social status: place of the "great" teacher in the immediate future.

#### FEEES FOR ADMISSION.

Half-a-guinea for the whole Course. Two shillings for a single Lecture.

\*.\* Members of the College have free admission to the Course.

## THE MODERN GEOMETRY OF THE TRIANGLE.

By WILLIAM GALLATLY, M.A.

"In this publication are presented some of the more important researches on the subject which have been undertaken during the last thirty years. The novel and interesting theorems, some British, but mostly from French and German sources, will widen the outlook of our mathematical instructors and lend new vigour to their teaching."

Second Edition, 124 pages, price 2s. 6d. (by post 2s. 9d.)

SPECIMEN PAGES AND SYNOPSIS FREE.

FRANCIS HODGSON, 89 FARRINGDON ST., E.C. 4.

(Catalogue of Educational Publications free.)

# SAVE ENVELOPES, PAPER, and MONEY.

## The Economy Envelope Labels

provide a means by which all may help in the National War-Economy Campaign. Old envelopes may be used again, and again, and again.

Send 1/- for a sample 100, or 9/- for 1000, to:—

F. H. VALLANCEY, Publisher,  
89 FARRINGDON STREET, LONDON, E.C. 4.

## A SELECTION FROM METHUEN'S EDUCATIONAL LIST

Announcement List and Catalogues sent on application.

- THE PLAY-WORK BOOK.** By ANN MACBETH, author of "Needlecraft." With 114 Illustrations. Crown 8vo. **3s. 6d.** net.

## REVIEWS.

*Joan and Peter. The Story of an Education.* By H. G. Wells. (9s. net. Cassell.)

We may suppose that Mr. Wells was aware that his publishers on this occasion would make a 50 per cent. advance in the price of 6s., which has come to be the standard price for a novel. Honest man as he is, Mr. Wells appears to have determined that the story of Joan and Peter should be long enough to excuse the addition. Herein we think his honesty played the traitor to his judgment, for his story might well have been compressed with advantage. His desire to tell us everything about the antecedents of every character in the work, his somewhat petulant discourses on that untidiness of the English mind which he has so often deplored, and his didactic garrulousness all make the narrative very tedious in parts. Instead of going forward to his destination he insists on showing us what he can do on the aeroplane wings of his Muse. He loops the loop, side-slips, executes bewildering nose-dives into fresh environments, and leaves us somewhat dazed when we make a safe landing on the seven hundred and forty-eighth page.

Joan and Peter are related, and we are told enough of their parentage to enable us to understand the strain from which they come. Peter's mother, Dolly, is a charming young woman, married to Arthur Stubland, a dabbler in the arts and an amateur in life. Joan is the daughter of Dolly's brother, a journalist with a weakness for drink. Oswald Sydenham is Dolly's cousin, and in due course he becomes the guardian of Joan and Peter, after Peter's parents have been drowned off the coast of Italy and after the children have undergone some experiences under the joint wardenship of their father's sisters, rather advanced ladies, and his aunt, Lady Charlotte Sydenham, a most excellently drawn type of the orthodox Victorian dame—"everything she wore had been decorated and sewn upon, and her chequered skirts below were cut out by panels and revelations of flounced purple." Lady Charlotte abducts the children from their own home and the easy discipline of their advanced aunts in order to place them under strict supervision by way of preparing them to become like herself, models of middle-class orthodoxy.

We have a picture of the very worst kind of private school for boys, whence Peter runs away to rejoin his aunts. Meanwhile Oswald Sydenham has returned from Africa and empire building, and he arrives in England to find that he is legally the sole guardian of the children. Hence we are brought to the educational record of Joan and Peter, whereon Mr. Wells spends much care, taking the opportunity of expounding his own views as to the defects of our school system without giving us anything considerable in the way of constructive ideas. Nevertheless, as always, Mr. Wells succeeds in placing his probe in the weak spots of our educational system. Here is a short passage on the kindergarten as understood by a blind disciple of the system:

Miss Mills was an enthusiast for the kindergarten. She began teaching Joan and Peter queer little practices with paper mats and paper pattern folding and the stringing of beads. As Joan and Peter had been doing such things for a year or so at home as "play," their ready teachability impressed her very favourably. All the children who fell under Miss Mills got a lot of kindergarten, even though some of them were as old as nine or ten. They had lots of little songs that she made them sing with appropriate action. All these songs dealt with the familiar daily life—as it was lived in South Germany fourscore years ago. The children pretended to be shoemakers, foresters, and woodcutters and hawkers and cowherds and masons and students wandering about the country, and they imitated the hammering of shoes, the sawing of stone, or the chopping down of trees, and so forth. It had never dawned upon Miss Mills that such types as these were rare objects upon the Surrey countryside.

The last sentence of this extract probably contains the heart of Mr. Wells's educational doctrine, and its full exposition will be awaited with interest. He appears to hold that education is a process of explaining the world, and that every part of instruction should be made significant for the pupil. The world to be explained is that in which the child is living at the moment. Hence comes the bitter comment which Mr. Wells showers upon the traditional curriculum. He makes

Oswald Sydenham declare that it is much more necessary for Peter to know something about Lord Salisbury (this is in 1902) than about Cicero. He concluded that

education in the public schools of Great Britain was not a forward-going process, but a habit and a tradition, that these classical schoolmasters were saying "nothing like the classics" in exactly the same spirit that the cobbler said "nothing like leather," because it was the stuff they had in stock. These subjects were for the most part being slackedly, tediously, and altogether badly taught to boys, who found no element of interest in them; the boys were, as a class, acquiring a distaste and contempt for learning thus presented, and a subtle, wide demoralization ensued.

There is altogether too much of truth in this to leave us quite comfortable, and such solace as we may find is supplied by Mr. Wells himself through the mouth of Mr. Mackinder, the Head Master of White Court Preparatory School. This passage is too long to quote, but it should be read and pondered over by everybody who is interested in education. Mackinder points out how the schoolmaster is "severely conditioned," though he seems to be free:

Oswald began to realize for the first time the eternal tragedy of the teacher, that sower of unseen harvests, that reaper of thistles and the wind, that serf of custom, that subjugated rebel, that feeble, persistent antagonist of the triumphant things that rule him.

This is excellent as an apology, but Mr. Wells appears to us to give far too little weight to the fact that the world as it now is, which he rightly regards as a thing of supreme moment to be explained to children, cannot be explained properly in and by itself. It is not a separate creation, but a growth. When we set out to explain Lord Salisbury, for example, we cannot do it properly without some knowledge of Cicero, inferior as Cicero may have been in Mr. Wells's view.

It is the ever-present difficulty in education that the system is controlled by adults who have not grown up in the educational sense at all, but remain where they were in their own schooldays. There is no excuse for this mental inertia among schoolmasters, and Mr. Wells points out that "few teachers in upper and middle-class schools in England in those days knew even the elements of their business." Mackinder speaks of the difficulties he encountered in his attempts to get any pedagogic science or training. "This is the most difficult profession in the world," he said, "and the most important. Yet it is not studied; it has no established practice; it is not endowed. Buildings and institutions are endowed, but not teachers. And in Great Britain, in the schools of the classes that will own and rule the country, 99 per cent. of the work was done by unskilled workmen, by low-grade, genteel women and young men."

All this is painfully true, and the only remedy is to build up a real profession of teaching, avoiding meanwhile any undue dependence upon State machinery.

Mr. Wells has written a book with many passages of rare beauty and interest. His description of Peter's first flight in an aeroplane is a thing to marvel at. It should be read to all schoolboys. The educational passages should be made the basis of another book, about half as long as the present one, with a full description of the author's educational aims and of the methods he recommends. We assure Mr. Wells that schoolmasters do not resent helpful criticism, but they are naturally inclined to be a little restive under the lash of a literary layman.

*A History of Everyday Things in England. Part I.* Written and illustrated by Marjorie and C. H. B. Quennell. (8s. 6d. net. Batsford.)

At last we have the very history book that teachers have long sought. It is entitled "A History of Everyday Things in England," is written and illustrated by Marjorie and C. H. B. Quennell, and is published by B. T. Batsford, Ltd., London. In place of the usual dry textbook chronicle of the doings of kings and queens, of wars and battles, we have here a most interesting and successful attempt to set forth the mode of life of the people during the five centuries following the Norman Conquest. The subsequent period is to be dealt with in a later volume, but the present one is complete in itself, and should find a place on the shelves of every school library. This hackneyed phrase of commendation has a special justification as far

(Continued on page 158.)

# CASSELL'S NEW EDUCATIONAL WORKS

## A HISTORY OF ENGLAND.

By the late Rt. Hon. H. O. ARNOLD-FORSTER.

New and Revised Edition to 1918 by Mrs. Arnold-Forster.

*Extra Crown 8vo. With Maps and 250 Illustrations, 7s. 6d. net. Also in 2 Parts, 4s. net each.*

Since the first publication of this well-known History, twenty years ago, over 50,000 copies have been sold. From time to time some slight alterations have been made, but in this revised edition of the chapters dealing with the Victorian Age have been rearranged and extended and others have been added, bringing the story as far as possible down to our own times.

At present it is not possible to add to this new edition the chapters on the Great War, which it must eventually include; but the causes which led to hostilities, and the reasons which brought Great Britain and the Allies into it, are fully told.

## THE CITIZEN READER.

By the late Rt. Hon. H. O. ARNOLD-FORSTER.

Completely Revised Edition, with new Illustrations, by Mrs. Arnold-Forster. *Crown 8vo, cloth, 2s. net.*

Throughout his life Mr. Arnold-Forster looked forward in faith to the growth of a closer sense of relationship and interdependence between the various parts of the great Commonwealth of British nations that we call the Empire. During recent years the growth of this feeling of unity between the Mother Country and the Dominions has made great progress, as the events of the War have shown. The joint responsibilities of the Commonwealth have increased a hundredfold, and it becomes more needful than ever that we should make ourselves responsible and well-informed citizens.

The changes that have taken place in the years that have passed since Mr. Arnold-Forster's death in 1909 have made it necessary to revise and add to almost every chapter in this book, such alterations being essential if a book of this nature is to have continued life and usefulness.

## THE NEW LATIN PRIMER.

By Prof. J. P. POSTGATE, M.A., Litt.D.

*Professor of Latin in the University of Liverpool,*

*With the Co-operation of C. A. VINCO, M.A.*

*55th Thousand. Entirely New and Revised Edition. Crown 8vo, 216 pages, cloth, 3s. net.*

The object of this Grammar is to provide in a concise and readily comprehensible form such information as would be required by all but advanced students of Latin. While the main features of the book have been left undisturbed, its details have been carefully scrutinized and numerous improvements in presentation, expression, and illustration introduced in this new edition. A Supplementary Section has been added on the Changes of Verbs in Composition, and at the request and for the convenience of teachers a full alphabetical index to the same.

*By the same Author (17th Thousand).*

### THE FIRST LATIN PRIMER.

*112 pages. Crown 8vo, cloth 1s. 6d. net.*

## CASSELL'S SCRIPT WRITING COPY BOOK.

*Size 11 inches by 7 inches. 3d. net.*

For some years past attempts have been made to popularize "Manuscript Handwriting," and to introduce it into the Schools.

The subject was discussed at the L.C.C. Teachers' Conference in 1913, with the result that this method of writing was adopted in several London Schools with highly gratifying results, both as regards speed and legibility.

In 1916 at the April and November meetings of the Child Study Society, several well-known educational experts read papers dealing with the teaching and aims of manuscript writing, and these papers were subsequently published in "Child Study." The two papers read by Dr. Kimmins, Chief Inspector of Schools, L.C.C., give an interesting account of the development of this style of writing in this country and America, together with details of tests given by himself to 4,408 children in London Schools.

Up to the present no book on this style of writing, suitable for children, has been available, so CASSELL'S SCRIPT WRITING COPYBOOK, now issued at 3d. net, should supply this want and have a very wide sale.

Send for Cassell's Revised Educational Catalogue.

THE HOUSE OF CASSELL, La Belle Sauvage, E.C.4.

LONDON: DAVID NUTT, c/o SIMPKIN, MARSHALL, HAMILTON, KENT & CO., Ltd., London, E.C.4.

as this book is concerned, for teachers have always been handicapped in their efforts to make history teaching vivid and real, owing to the fact that the necessary material for the purpose was scattered through many expensive volumes. Architecture, shipbuilding, dress, furniture, farming, and other daily pursuits are all parts of history, and they happen to be those which make the strongest appeal to the young. Now these are precisely the matters on which it is difficult for a busy teacher to obtain accurate and detailed knowledge. There is another point in which this book excels; indeed, it may be described as the central or characteristic feature of the writer's purpose. It is that careful attention is given to the construction of things. Thus an excellent drawing of a medieval windmill is seconded by another, equally good, which shows how the mill worked. Similarly the actual structure of buildings is carefully explained and illustrated. Nothing better can be imagined for those teachers who are striving to link up the teaching of literature and history with handwork. The book is a perfect mine of material, and the ingenious teacher will have no difficulty in seeing how best it may be utilized.

A word of special praise should be given to the drawings, plain and coloured. Many of these are the work of Mrs. Quennell, and they serve to give reality and meaning to the life of our forefathers. Especially pleasing are the coloured drawings of costumes, and these, we imagine, will be found useful in designing dresses for school plays and entertainments. For example, any of the historical plays of Shakespeare can be "dressed" accurately by copying the examples given in this book, and the colour scheme, as indicated by Mrs. Quennell, will give a stage picture singularly pleasing to the eye.

In this book the whole life of the Middle Ages is brought before us. It was a life full of the beauty of craftsmanship, permeated with religious sentiment, and very simple in its outline as compared with the complexities of our industrial and social system. There were many dark places, it is true, but no designation could be more absurd than the common phrase, the Dark Ages, as applied to the five centuries immediately following the Norman Conquest.

At any rate, Mr. and Mrs. Quennell have seen that the period had much of gaiety and beauty. They believe that honest handicraft is a source of joy to the workman and to those who use what he has made, and in depicting the Middle Ages in this beautiful book they have rendered a service to all teachers.

## ::: DENT'S NEW BOOKS. :::

### HOW TO READ THE BIBLE IN THE TWENTIETH CENTURY.

By SOPHIE BRYANT, D.Sc., Litt.D.

Price 3s. 6d. net.

For teachers and pupils of Secondary Schools as well as for the home and the Sunday School of the modern type.

*Times*:—"The book makes frank use of the results of modern criticism, while its reverent handling of the Scriptures must impress everybody. We are sure its value will be recognized."

### THE NEW TESTAMENT FOR SCHOOLS.

By Canon MORLEY STEVENSON, M.A.,  
and C. W. BAILEY, M.A.

264 pp. Cloth, Crown 8vo. Price 3s.

This volume consists of two parts, the first dealing with the life of Christ by means of a synoptic treatment of the Gospels, the second with the history of the Early Church as told in the Acts of the Apostles and the Epistles. "The Old Testament for Schools" is now so well known and so highly appreciated that this later volume is ensured a hearty reception.

J. M. DENT & SONS, Ltd., Bedford Street, W.C. 2.

*Theory and Applications of Finite Groups.* By G. A. Miller, H. F. Blichfeldt, and L. E. Dickson. (17s. net. New York: John Wiley. London: Chapman & Hall.)

In the above-named treatise on Group Theory we see another very important addition to the lengthy series of valuable mathematical textbooks produced in the course of recent years by Professors in American Universities. As teachers the authors have had excellent opportunities of becoming conversant with the needs of students and consequently of acquiring special qualifications as lucid exponents of the subject under consideration. The work possesses interesting individual characteristics to which it is useful to invite attention. The writers in collaborating have striven by mutual influence and conjoint labour on the treatise as a whole to produce a volume essentially reflecting the white light of their ideas in combination. Nevertheless the specialized knowledge of each in distinct branches of the theory discussed has been allowed free play in the successive "Parts" of the treatise, each of which is primarily due to one author. Prof. Miller devotes himself to the consideration in Part I of Substitution and Abstract Groups. Naturally Abelian and prime-power groups occupy an important position in his text, and readers will find much of the author's original work in the subject, more especially in the later chapters. Part I is by far the lengthiest section of the entire volume, and forms about one half of it. In Part II the Professor of Mathematics in Stanford University deals with the theory of Linear Groups. Here again there are original contributions due to the author's independent investigations and research and the prominent aims of the text are excellent, namely, comprehensiveness within the scope of the work and simplicity of treatment. Part II is more particularly the production of the Professor of Mathematics in the University of Chicago, Prof. L. E. Dickson, and by this well-known writer we find set forth Galois' theory of Algebraic equations and a discussion of numerous applications of Finite Groups, some of the problems treated being of great classical and historic interest. The work is suitably dedicated to the celebrated Camille Jordan.

*Combinatory Analysis.* Vol. II. By Major Percy A. MacMahon, F.R.S., D.Sc., LL.D. (18s. net. Cambridge University Press.)

The first volume of Major MacMahon's "Combinatory Analysis" has already been noticed in these columns, and the two volumes together exhibit a series of exceptionally important and valuable investigations in this branch of higher

(Continued on page 160.)

## CHEMISTRY FOR BEGINNERS AND SCHOOLBOYS.

3rd EDITION.

ENLARGED and ILLUSTRATED.

By C. T. KINGZETT, F.I.C., F.C.S.

(Chairman of the "Sanitas" Co., Ltd.)

In this (3rd) Edition of his valuable book Mr. Kingzett has adopted what is essentially a new method of teaching practical chemistry. This is obviously the rational method, and the new part of this book, embracing sixty pages with eighty-one illustrations, makes it the most perfect book on Chemistry for Beginners and School use yet produced.

SIDGWICK & JACKSON, LTD.

mathematical analysis. A large portion of the text is the outcome of original research and discovery on the part of the author, and the whole presents to the reader on the one hand a wealth of new ideas and on the other a novel treatment of much already existing theory. Expositions belonging to the latter category of information have undergone very wide generalization. The exact effect, as regards both nature and degree, which the new treatise will have on the trend of theory of numbers, it is of necessity impossible to forecast, but there can be no doubt that it will be very considerable and will live; further, there can be no real question as to whether the author's discussion of "Partitions," a branch of the theory which he has developed on entirely fresh lines, will arouse the keen interest of every mathematician pursuing this subject.

*Hydrodynamics.* Fourth Edition. By Horace Lamb, M.A., LL.D., Sc.D., F.R.S. (24s. net. Cambridge University Press.)

Prof. Horace Lamb's treatise on the above branch of mathematical physics is too well known, and stands on too high a plane, for its fourth edition to need review in the usual acceptance of the word. In fact, if we carefully compare the latest issue of the work with the third edition, bearing date 1906, we find that the changes which the text has undergone are so clearly suggested in the preface that all that is necessary at this stage of the book's career is to sum up very briefly the author's notes contained in that preface. The work then remains substantially the same, but has been subjected to revision, whilst some small portions have been rewritten, some additional matter has been introduced, and in some cases minor omissions have been made. In discussing velocity-potential, the author adheres to the variations from precedent which he saw sufficient reason to adopt in his second edition, and which he is still of opinion are amply justified by physical arguments. He has made a further deviation from customary usage in connexion with the consideration of vorticity.

## GENERAL NOTICES.

### EDUCATION.

*The W.E.A. Education Yearbook.* (16 Harpur Street, Red Lion Square, W.C.1.)

The Yearbook of the Workers' Educational Association is a new venture which is not intended primarily to supply information as to detail, but to stimulate the development of thought on educational questions. A characteristic preface is supplied by Mr. Bernard Shaw, who appears to think that education is largely in the hands of pedagogic Neros. Apart from this nonsensical introduction, the rest of the volume is of some value.

*Public School Christianity.* By E. F. Duggan. (1s. S.P.C.K.)

In a pamphlet of some sixty pages Mr. Duggan urges the importance of making religion a vital part of school life. He quotes with commendation the following passage: "Childhood is full of a rudimentary mysticism. I have seen children at the Eucharist still and wondering in the silent minutes which should follow always the Consecration, before organ or voice intrude upon our adoration. Children feel the atmosphere of the Presence, and their inarticulate silence is as welcome to Him as their shrill hosannas."

### ENGLISH.

*English for Technical Students.* By Frederick Felix Potter.

(2s. net. Pitman.)

This little volume is an attempt to meet the needs of those adult students who require instruction in the preparation of essays and examination questions. It is admirably devised for the purpose in view, giving in the earlier chapters some extremely useful hints as to the pitfalls in spelling and punctuation and passing on to the choice of the right word and the difficulty of expressing one's meaning exactly. Useful sections on reading for information and the preparation of summaries and abstracts lead up to hints on the writing of an essay. The whole forms a very useful handbook.

*Macaulay's Life of Johnson.* Edited by John Downie, M.A.

(1s. 6d. net. Blackie.)

Mr. Downie has prepared a very useful handbook to Macaulay's well known essay. A biographical introduction is followed by a chronological table of Johnson's life, and the text is followed by a number of carefully prepared explanatory notes.

(Continued on page 162.)

### ECONOMY IN MAP BUYING.

## BACON'S MODERN MAPS

Size, 30 by 40 inches.

A selection of **FOUR, OR MORE**, of the following 136 fully coloured Maps will be supplied at 5s. 6d. per Map, MOUNTED ON CLOTH, CUT-TO-FOLD, with METAL EYELETS FOR PINNING UP, IN A STRONG CLOTH-COVERED CASE. A case holding four Maps measures 13×11×1 inches.

# HARRAP'S PUBLICATIONS

## HARRAP'S INTRODUCTORY ALGEBRA

By WILLIAM FARQUHARSON, M.A., Daniel Stewart's College, Edinburgh. Crown 8vo, 172 pages, with Answers, 2s. net. Also without Answers, 1s. 9d. net.

From the *Principal of a Preparatory School*:—"Farquharson's *Algebra* is first-rate, and I shall put an order through in due course. I hope the book will have the success it deserves, for of the large number of elementary Algebras I have perused in my search for something suitable for beginners, this is the only one that appears to have realized and provided for the extraordinary difficulty of the subject for small boys."

## AN INTRODUCTION to the HISTORY of SCIENCE

By Dr. WALTER LIBBY, M.A. With Eight Illustrations. Crown 8vo, 304 pages, 5s. net.

## POLITICAL ECONOMY

By CHARLES GIDE, Professor of Political Economy in the University of Paris. Authorized Translation by C. H. M. ARCHFIELD, M.A., made under the direction of the late Prof. WM. SMART, M.A., LL.D., Glasgow University. Demy 8vo, 780 pages, 15s. net.

This important translation was in preparation for nearly three years, and this has enabled the translator to incorporate the extensive revisions by the author in the Third French Edition which has recently appeared. The book is independent of the same author's *Principles*, and is designed for more advanced students.

## A HISTORY OF ECONOMIC DOCTRINES

From the time of the Physiocrats to the Present Day. By Prof. CHARLES GIDE, University of Paris, and CHARLES RIST, University of Montpellier. Translated from the Second Revised and Augmented Edition of R. RICHARDS, B.A., University College, Bangor, under the direction of the late Prof. WM. SMART, Glasgow University. Demy 8vo, 720 pages, 15s. net. This very important work has been welcomed as the first serious history of political economy in English.

## PROBLEMS OF SUBNORMALITY

By S. E. WALLACE WALLIN. Demy 8vo, 500 pages. 15s. net. A New work of first importance to child-welfare workers, physicians, sociologists, teachers of special classes, and inspectors of schools. The educational, social, preventive, and eugenic questions involved in the problem of subnormality are thoroughly discussed.

## HARRAP'S ILLUSTRATED HISTORY OF ENGLAND SERIES

Complete in Eight Volumes.

Each containing from 150 to 200 carefully chosen illustrations. Crown 8vo, School Edition, strongly bound in cloth. Prize Edition, with frontispiece in colour, price 3s. 6d. net each.

Send for Educational List.

## SPANISH

N.B.—A New Descriptive List of all Books in Spanish will be sent on application.

## A FIRST SPANISH COURSE

By Profs. E. C. HILLS and J. D. M. FORD. With Exercises and Vocabularies. Crown 8vo, 340 pages, 4s. net. Key, for Teachers only, 5s. 3d. net. This easier course is designed for much younger pupils than the Author's previous work.

## SPANISH COMMERCIAL CORRESPONDENCE

A Reader, Manual, and Composition Book, by A. F. WHITTRM, Harvard University, and M. J. ANDRADE. With full Vocabularies and Index. Crown 8vo, 330 pages, 4s. 6d. net. (In the Press.)

## THE SPANISH-AMERICAN READER

By ERNESTO NELSON. With full Notes and Vocabulary. Crown 8vo, 370 pages, 4s. 6d. net. Suitable for second year students in schools and for evening classes.

## LIBRO DE LECTURA PARA PRINCIPIANTES

Edited by E. MAURER, Reading School. With Vocabulary and Exercises. Small Crown 8vo, limp, 160 pages, 2s. net.

## PEQUEÑO VOCABULARIO

By ALBERT A. MERRAS, Ph.D. Size 5½ by 3 inches, 72 pages, limp cloth, 8d. net.

This book contains classified lists of two thousand Spanish words, with English equivalents.

## RUSSIAN

## HARRAP'S PRACTICAL RUSSIAN GRAMMAR

By R. T. CURRALL, M.A., George Watson's College, Edinburgh. Part I. With Phonetic Transcript, Exercises in the Russian Handwriting, and Vocabulary. 272 pages. Crown 8vo, 6s. net.

## A RUSSIAN PRONOUNCING VOCABULARY

With an Introduction on Russian Pronunciation. By R. T. CURRALL, M.A., George Watson's College. Size 5½ by 3 inches, 128 pages, limp cloth, 1s. net.

Classified lists of more than two thousand words, with phonetic Transliteration.

2 & 3 Portsmouth St., Kingway, London, W.C.2

# A SELECTION FROM A. & C. BLACK'S HISTORY PUBLICATIONS

By H. L. BURROWS, M.A.

## THE STORY OF ENGLISH INDUSTRY AND TRADE

With Thirty-six Illustrations. 2s.

This volume presents in an attractive form a branch of English History which has not hitherto received the attention its importance merits, but which is now beginning to be widely studied. The book is intended for use as a reader and textbook for the upper classes of primary schools, and the lower and middle forms of secondary schools.

By EUGÈNE L. HASLUCK, B.A., F.R.Hist.S.

## AN INTRODUCTION TO THE HISTORY OF ENGLAND

With fifteen Sketch Maps. 3s.

This volume aims at delineating in clear outlines the main threads of our History, and at enabling the student to grasp the essential lines on which England has developed as a State. For these purposes a continuous chronological order has been abandoned, and where two or more distinct threads of development run through a long period, these have been dealt with separately in different chapters. This book will prove, it is hoped, a satisfactory textbook for use in the upper forms of schools, and a good knowledge of the contents of this volume should be sufficient for the purposes of the London Matriculation Examination.

By M. W. KEATINGE, M.A., D.Sc.,

Reader in Education in the University of Oxford; and N. L. FRAZER, M.A., Head Master of Ilkley Grammar School.

## DOCUMENTS OF BRITISH HISTORY

In One volume. Price 5s. Or in Six Sections. Limp Cloth. Price 1s. each.

Sec. I. A.D. 78-1216. Sec. IV. A.D. 1603-1715.  
II. A.D. 1219-1399. V. A.D. 1715-1815.  
III. A.D. 1399-1603. VI. A.D. 1815-1900.

These Documents, with the exception of Section VI, are reprinted from "A History of England for Schools," by the same authors.

## ENGLISH HISTORY ILLUSTRATED FROM ORIGINAL SOURCES

From earliest times to A.D. 1665. With 36 Illustrations.  
1066-1216. With 35 Illus. 1485-1603. With 31 Illus.  
1216-1307. With 21 Illus. 1603-1660. With 33 Illus.  
1307-1399. With 14 Illus. 1660-1715. With 29 Illus.  
1399-1485. With 28 Illus. 1715-1815. With 11 Illus.

Price 2s. 6d. each.

The plan of this series is so laid that interest in the textbook or in the teacher's words is stimulated by supplementary reading, and sufficient premises are given to allow of a reasonable and reasoning deduction. The extracts are taken from contemporary authors, or are themselves contemporary documents, and have been chosen to illustrate as fairly and as vividly as possible the really important events of the period, and to explain the motives of the chief actors.

By M. W. KEATINGE, M.A., D.Sc.,

Reader in Education in the University of Oxford.

## A FIRST HISTORY OF ENGLAND

With 130 Illustrations. 3s. 6d.

Or in two half volumes at 2s. each.

This history is suited for boys and girls from nine to twelve. Its main features are the large number of pictures, upon which to a great extent the narrative is based, the attention paid to social and industrial history, exercises on the pictures, and references for the teacher or the pupil to illustrative material for each episode. Summaries are included.

A. & C. BLACK, Ltd.,  
4, 5, & 6 Soho Square, London, W.1.

*Essays on Goldsmith by Scott, Macaulay, and Thackeray.* By G. E. Hadow and C. B. Wheeler, M.A. (2s. 6d. Clarendon Press.)

This volume has the merit of being designed on novel lines, since it contains three critical essays on Goldsmith by writers of eminence, and thus affords interesting material for the study of criticism. The editors have supplied a valuable introduction and notes, and the volume will be of service to boys and girls in the senior forms of secondary schools.

*Spenser's Faerie Queene.* Book V. By Alfred B. Gough, M.A. (3s. net.)

The Clarendon Press has produced a very dainty volume containing Book V of Spenser's poem, prefaced by a scholarly introduction and followed by a very full vocabulary with explanatory notes. A useful chronological table gives information as to the historical events referred to in the poem.

*Johnson and Goldsmith and their Poetry.* By William Henry Hudson. (1s. 6d. net. Harrap.)

In keeping with the object of the series to which it belongs, this little volume provides a critical estimate of the poetical works of Johnson and Goldsmith, with a series of chosen examples linking up the life story of the poet and directing attention especially to his personality as expressed in his work. The volume is beautifully printed and will be welcomed by teachers and students of literature.

*Tales from Indian History.* By A. S. Roe. (1s. 6d. net. Macmillan.)

This paper-covered volume forms part of the series of works on English literature for secondary schools, and contains a selection of stories taken from Indian History, and told in a vivid fashion likely to appeal to pupils. A useful introduction serves to place the stories in proper perspective in relation to the history on which they are based.

#### CLASSICS.

(1) *Virgil: Aeneid VI.* Edited by C. E. Freeman. (1s. 9d. Clarendon Press.) (2) *Virgil: Aeneid X.* Edited by T. L. Papillon and A. E. Haigh. (2s. Clarendon Press.)

Two extremely useful editions, containing valuable introductions and explanatory notes, and produced in the excellent style for which the Clarendon Press is justly approved.

*Roman History, Literature, and Antiquities.* By A. Petrie. (2s. Clarendon Press.)

This little volume is a companion to Mr. Petrie's "Latin Reader." It is a sketch in outline of Roman history, with an account of the constitution, religion, army, and legal system of Republican Rome. Maps and illustrations add to the value of the book.

*The New Latin Primer.* By J. P. Postgate, with the co-operation of C. A. Vince. (Cassell.)

This is practically a new edition of this well known textbook, which has been entirely revised and reset. In its new form the work will be even more useful than hitherto in the lower forms of schools.

#### MODERN LANGUAGES.

*Lectures Françaises Phonétiques.* Par Paul Passy. (1s. 3d. Heffer.)

In this little book of French readings the author gives a list of phonetic symbols, followed by a selection of extracts printed therein for the use of pupils learning by the phonetic method.

*Nouveaux Récits Héroïques.* By M. Charles Guyon and Georges Thomas. Edited by Marc Ceppi. (1s. 9d. Bell.)

Mr. Marc Ceppi, of Whitgift School, has prepared this excellent series of tales of the Great War, designed to serve as a reader for schools. The stories deal with the exploits of the Canadians, the heroism of children, and the use of Tanks in the battlefield—all likely to be interesting to boys and girls in these times.

*Easiest French Reader.* By Marc Ceppi. (1s. 6d. Bell.)

Mr. Ceppi has also prepared a collection of fairly long stories, which are adapted to beginners by reason of the simple language used and the careful graduation of grammatical difficulties.

#### HISTORY.

*A First Story of England.* By M. W. Keatinge. (3s. 6d. Black.)

Dr. Keatinge has written a history book on new lines. In a rapid survey of events he lays special stress on economic conditions, and various happenings are described as they would appear to ordinary folk of the period. Beginning with a description of the Manor of Oakwood, he traces the fortunes of the descendants of the original dwellers thereon, and thus provides a picture of life in England at successive periods. A large number of excellent illustrations add to the value of the book, which is especially suitable to young children.

*The Story of the People of Britain.* By Mary Sarsen and Lucy Hanson. In Four Parts. (2s., 2s. 3d., 2s. 6d., 2s. 9d. Cambridge University Press)

In these four volumes the authors have dealt with the history of England from B.C. 55 to the opening of the War with Germany. Each volume is designed to make a special appeal to pupils of the age for which it is planned. Thus the first volume deals with persons rather than causes, while the second treats of the beginnings of our political life. The books are excellently printed in a type which is suitable for children.

#### GEOGRAPHY.

"History's Background."—*The British Isles.* By J. S. Townsend and T. Franklin. (2s. W. & A. K. Johnston.)

This forms part of a series of historical geography readers intended to provide companion reading to the geography and history textbooks. The aim is to show the influence of geographical conditions on historical developments. The treatment followed is, in our opinion, far too detailed for the senior pupils in elementary schools or the junior pupils in secondary schools, for whom the authors say the book is designed. Used with discrimination by a teacher, the volume will furnish material for excellent lessons, linking up history and geography.

"Geographical Exercise Books."—No. 7: *Physical Geography.* (1s. 6d.) *Contouring and Map-Reading.* (2s.) Both by B. C. Wallis. (Macmillan.)

These are two excellent books for class use, giving exercises in recording the facts of physical geography and in the use of maps. They will be found especially valuable for members of the Officers' Training Corps.

#### MATHEMATICS AND SCIENCE.

*Numerical Trigonometry.* By P. Abbott. (5s. Longmans.)

Mr. Abbott has produced a book which is obviously the work of a skilled teacher. He has adopted the title "Numerical Trigonometry" as covering not only the scope of the volume, but also as indicating the method of treatment. This is designed to relate trigonometry with algebra more closely than hitherto, and in this Mr. Abbott has been very successful. A number of useful examples and solutions add to the value of the books.

**RELIGIOUS KNOWLEDGE.** *The Books of the Bible for College of Preceptors' Examinations, 1919, are included in Murby's New Scripture Manuals. These Manuals are being universally praised.*

Messrs.

## TRUMAN & KNIGHTLEY, LTD.

Educational Agents,

158 to 162 OXFORD STREET,  
LONDON, W.1.

Directors:

B. A. TRUMAN.

JAMES HEARD, B.A.

(Trinity College, Cambridge).

Telegrams—"TUTORESS, PHONE, LONDON."  
Telephone—Museum 1136.

*This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.*

### A.—EMPLOYMENT DEPARTMENT.

#### (i) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

#### (ii) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

#### (iii) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

### B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

*No charge is made to Purchasers.*

*All communications and inquiries are treated in the strictest confidence.*

### C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

*Full particulars will be forwarded on application.*

**THE LONDON SCHOOL

## NOTES AND COMMENTS.

### Our New Issue. Monthly Publication.

WITH this number the EDUCATIONAL TIMES begins a new series, taking up afresh the running which the journal has maintained for over seventy years. Amid the current discussions on reconstruction, it is perhaps not unfitting that educational periodicals should also seek a new form and a renewed purpose. This is our aim, and we hope that the journal will retain the support of its old friends while gaining many new ones. Instead of maintaining longer the war-time practice of quarterly issues, it has been decided to resume forthwith the monthly publication, and full particulars will be found in our prospectus. It is our hope that a place may be found for a journal which seeks to offer monthly a concise survey of the chief events in the educational world and to treat these events in their relation to social progress in general. Education is not an isolated thing, but an integral part of the efforts of men and women to secure a fuller life for themselves and their children.

\* \* \* \*

### Mr. Fisher and the Board.

SOMETHING akin to consternation was evident at the earlier Conference meetings this year when it was whispered that Mr. Fisher would probably be "promoted" when the new Government was formed. We are told that the rumour was not without foundation, and that strong pressure was exerted to secure his removal. Various meetings of teachers passed resolu-

tions, and some even sent telegraphic messages to urge the Prime Minister to keep Mr. Fisher at the Board of Education, and at one meeting Mr. Fisher himself declared that he could not regard any transfer from his present post as "promotion." Yet the use of this word is justified by reason of our strange custom of paying to the official head of our nation's schools as a salary only two-fifths of the sum paid to the master-in-chief of our workhouses. Until this anomaly is removed we shall always find the office of President of the Board of Education regarded as a mere passage-way for aspiring politicians. Fortunately Mr. Fisher is not only a politician, but an educationist as well, and it may be hoped that in remaining at the Board of Education he is carrying out one of his own injunctions concerning holidays—"Stay where you are happy."

\* \* \* \*

### A Notable Departure.

THE Head Masters' Conference has always been regarded as a somewhat awe-inspiring body, with a flavour of respectable antiquity derived from its self-imposed relationship with Oxford and Cambridge. It has even been suggested that, like some other worshipful bodies and persons, it has deliberately remained frigid lest any melting should involve complete deliquescence. We have never shared these views, so derogatory of a noble and well paid body of men, but we nevertheless welcome the announcement that the Conference has recently held a joint meeting with the Incorporated Association of Head Masters. The combined deliberations of the two bodies were evi-

dently very fruitful, judging from the published report. Perhaps the most surprising chord of the novel harmony was the decision that an Arts degree ought to be obtainable without any examination in Greek or Latin. When this proposal is adopted the term "B.A." will have little or no definite meaning, unless it is accompanied by an abbreviation showing the branch in which it was gained. Having embarked on the production of graduates who are entitled to describe themselves as B.Sc. (Eng.) or B.Com. or B.Lit., we might now consider the desirability of returning to the simple practice of awarding a B.A. to every student who has passed the first grade in any faculty of any University. The detailed specification might be disclosed only when necessary.

\* \* \* \*

### The Continuation Schools.

In his address to the Head Masters' Association, Mr. Spurley Hey, Director of Education for Manchester, made the depressing statement that "there could be little or no real educational relationship as between that growing body of adolescents who were passing through secondary schools and that large mass of adolescents who would shortly begin their march through the day continuation schools." Our view is that there ought to be the fullest possible relationship between the two classes of schools and between the teachers and pupils working in them. A better name for the new institutions would be "Part-time Senior Schools," since they are no more continuation schools in the proper sense of the term than are any other schools for adolescent pupils. It will be a great mistake to divide our young people into two separate classes, having no relationship with each other. The secondary schools are quite properly urging that their pupils should start at the age of thirteen or earlier, and if Mr. Spurley Hey's view is correct these children will become a select class, the future rulers and administrators, while to their less fortunate fellows will be assigned the humbler tasks for which they will be prepared in establishments carefully insulated from the main current of secondary education proper.

\* \* \* \*

### Organization of Schools.

It is hardly to be supposed that this arrangement will find favour among working people, among whom the best minds and most enlightened opinion are eager for knowledge, not primarily as an industrial asset, but most of all as a means of enjoying a fuller life. If they cannot obtain this for themselves they will seek it for their children, and their demand cannot be resisted. In our opinion it may best be met by an arrangement based on a frank recognition of the fact that the kind of schooling for all children up to the age of eleven should be approximately uniform in character, beginning with the nursery or nursery school and passing on to the junior school. Then might follow the middle school up to the age of fourteen or fifteen, followed by the senior school, whole time or part-time, up to the age of eighteen. For the present the middle school period might end at fourteen, leaving the senior school to cover the period from fourteen to sixteen. Nursery schools and junior schools might be staffed solely by women, leaving the men free to deal with boys and youths in the middle and senior schools.

The term "secondary school" has no longer any educational significance, since it is commonly used to indicate nothing more than a social difference.

\* \* \* \*

### Demobilization of Teachers.

THE question of demobilizing those soldiers and sailors who are not required as part of the Army of Occupation is apparently being handled with a want of good sense which is surprising even those who had imagined that nothing could surprise them in such matters. Perhaps the unique character of the present muddle is due to the combined or assorted efforts of the fourteen departments which are said to be concerned. Ineptitude is not merely multiplied by fourteen. It is raised to the fourteenth power and becomes something so colossal as to be grotesque. Meanwhile heads of schools are left wondering as to when their men will be released. Men of the greatest value to our educational work are interned in offices or taking instruction courses to train cadets who will never be enrolled. One man is supervising laundries, while another is waiting on an officers' mess.

\* \* \* \*

### Army Education.

MEANWHILE the Army, under the vigorous superintendence of Colonel Lord Gorell, is said to be educating itself with the utmost ardour. Forms are passing to and fro, which is the military symbol of activity. We hear of one received at a school but recently which informed the schoolmaster that there were so many shorthand textbooks and mechanical drawing books available and asked him to say at once how many were required. There had been no preliminary warning, and nobody had the least idea how many soldiers wanted to study these branches of learning. But the form was sent off and military etiquette was saved. A number of men have been sent to Oxford to receive an intensive course of training in teaching. About one-third of the first lot were already trained teachers in civil life.

\* \* \* \*

### Mr. P. A. Barnett.

THE retirement of Mr. P. A. Barnett from the inspecting staff of the Board of Education should not pass unnoticed. When the true story of the development of the training of teachers in England comes to be written it will be found that its main features are due to the foresight and zeal of Mr. Barnett. At Borough Road Training College nearly thirty years ago he instituted a system of three-year courses and University studies, thereby rescuing the more able students from the soul-destroying aridity of the old-fashioned syllabus prescribed by the Government in those days. He also paved the way for the establishment of teachers' training departments in the Universities and for some years acted as Chief Inspector of Training Colleges. In this post he was able to influence many colleges and their teachers, and his visits were always welcomed. Great regret was felt when he was transferred to another branch at the caprice of a commonplace political President of the Board, whose conscience was Nonconformist in repute but singularly conformable in reality. During the war Mr. Barnett has lost his only son, a scholar of Balliol and a young man of most brilliant promise.

## VOCATIONAL EDUCATION IN THE LIGHT OF THE WORLD WAR.

By JOHN DEWEY,

Professor of Philosophy, Columbia University,  
New York.

### WARS AND EDUCATION.

FOR several hundred years every great war has been followed by a very general educational readjustment that has been one of the valuable by-products of war. The religious wars of the seventeenth century were the precursors of the organization of general education of youth throughout Europe. The defeat of Germany by Napoleon was the basis of the national general educational scheme of Germany. It was after the Napoleonic wars that Lord Brougham made the first proposal for universal compulsory and public education in England, and anyone who has followed the discussions in England at the present time knows that the war has given a very great stimulus to the movement towards national education in Great Britain.

### THE INTELLECTUAL FACTOR.

The war looks like a war of physical resources, a war of material, a war of ammunition, munitions, with the factories behind them, a war of foods, a war of transportation—a war generally of the effective organizations and mobilizations of the physical and material resources of the various nations at war; a struggle of ships and railways, of farms and factories; but, just in the degree in which the war has become more and more a war of the organization of materials, munitions, food, and transportation, it has been made clear that effective production and mobilization of all of these things is absolutely dependent upon the underlying human capacity, upon inventive, organizable, energetic human resources.

“The man behind the gun” has always been a significant phrase, and the present war has simply shown that “the man behind the gun” includes the women in our homes, the men on the farms and in the factories; and that this strain on the material side comes back, after all, to a question of human morale and of our capacity and training. It is significant that an English newspaper, whose sub-title is “a journal of practical trade and finance,” has been led by the emergencies of the war to say that the true wealth of England consists not in capital, but in the labour, industry, skill, intelligence, and experience of man. If this lesson of the war is fully learned, it is the lesson upon which educational reconstruction and reorganization after the war must go on—it must go on with a view to greater liberation of human power.

### RIGHT TRAINING FOR WAR.

Now, I am speaking particularly of the bearing of this possible and necessary educational reconstruction

upon vocational education. In the light of the emergencies, the stress and the strain revealed by the war, it sometimes seems to me that some more comprehensive and fundamental realignment is demanded. Even the military aspects of the war have shown that the most fundamental training which is necessary for the successful military achievement must be found in the development of industrial efficiency, of industrial resourcefulness, and the adaptability of social co-operation in those national aims where enduring and enthusiastic loyalty is necessary.

Is it not, then, absurd to go on thinking of a universal training for a universal service—as if it could be exclusively, or even primarily, a military training for war service? The only really universal training which we could adopt for the war would be the training for a social service, because the only universal service is social service.

The plans which have been advanced in the past for universal training are in substance, with a slight modification, stereotyped, imitation systems which have been built up under alien European conditions. These schemes, which refer to our own conditions, do not exhibit imagination, courage, nor an understanding of the peculiar needs and the peculiarities of American life. It is interesting to see the number of persons, many of themselves educators, who, having been impressed with the military efficiency of Germany, seem to be intent upon Germanizing our own system of education, calling for methods of discipline and of teaching which will produce docility: a kind of fixed arrangement of superior and inferior skill in giving orders and in taking them. Technical specialization is a characteristic of the German educational system both in and out of the army, developing training for instinctive obedience and respect for authority as authority, irrespective of the ends and aims for which it is exercised. It is possible to secure a social organization in our own country only along the lines that are in harmony with our own tradition and our own distinctive purposes.

### REORGANIZATION: FOUR ESSENTIALS.

Approaching the post-war problem, what I have to say has to do, then, with preparing for the reorganization after the war. I would bear it out that the war has brought us a large physical plant which may be and which ought to be used, after the war is over, for constructive and educational purposes. The existence of these large cantonments and buildings and various resources will certainly be employed after the war as an argument, and a strong argument, for forcing upon the reluctant but practical-minded people some system of military training unless it can be shown to be still more usefully employed, more usefully available, in other directions.

Our cantonments, the equipment of physical and mechanical facilities which the war has been creating, furnish, then, a considerable part of the background of the scheme of vocational education which I have sketched. It is meant to include the youth of the country of the same ages. It ought to be truly universal, applying to young women as well as young men. Now upon this physical basis that we have spent millions of dollars in securing, an education should be built which comprises the four essentials of

preparation for a vocation, namely: physique, economic efficiency, social competency, and a trained capacity for the consumption and for the employment of labour. A thoroughgoing solution of the economic and industrial problem from the labour point of view in this country is a national scheme of socialized education applying to the youth between the older ages, just as we have already made our elementary system universal and conscriptive.

#### PHYSICAL TRAINING.

It is not necessary to speak of the first of these elements—the need of a sound physique. The war enforces that as it does so many other things. A sound physique in a population is not merely an element designed for the success and happiness of an individual, but it is a fundamental social asset. If the war had not made it clear that no nation can afford to neglect systematic attention to the physical condition of its citizens, the same lesson has been impressed in a score of other ways through the campaigns against consumption, against contagious sexual diseases, while the rapid spread of the movement against the drink evil has centred in a recognition again of the undermining of health from a social point of view. While, however, all of the lessons in methods of training which the war has produced should be utilized, as well as all other expert knowledge in physical training and culture, it must be noted that the military system not only neglects the future mothers of the nation, but is fatally defective in that it begins by rejecting and eliminating precisely that portion of the male population—from 40 to 50 per cent.—which is already most imperatively in need of the physical training.

#### EFFICIENCY TRAINING.

By the second element, economic efficiency, I mean industrial training in its stricter sense. The plan that we already have can, if imaginatively and wisely used, be made the basis for instruction in agriculture, various kinds of farming, various forms of productive industry, manufacturing, distribution, household management of different forms. The aims should not, of course, be immediate, highly specialized efficiency that is so immediate and so specialized as to limit future growth or to predestine individuals to occupy simply a particular niche. It should be aimed, rather, at a discovery of personal aptitude to practise familiarity with the fundamental processes of industry, and should be devoted to the development of as much initiative, as much variety, as is possible. Moreover, the industries and the education that go with them should be organized from the beginning on a productive—socially productive—basis, not merely to reduce the expense, but even more than that—to cultivate the self-respect which comes to individuals when they know that they are doing work which is of actual practical use, financially measured. What we need in this industry, organized on a productive basis, would be to have the education devised so as to meet actual social needs, productively measured instead of being based in exercises which have been invented to be repeated simply in the hope of sooner or later getting a certain amount of education.

[To be continued.]

## EURHYTHMICS: A CRITICISM.

By "MUSICUS."

[The writer of the following article is a well known teacher of music. His views should not be taken as those of *The Educational Times*.—EDITOR E.T.]

#### "METHODS" AND "SYSTEMS."

THIS is an age of educational "Methods" and "Systems," if not of method and system. The desire to try experiments in teaching, laudable as it may be, has its dangers, because it is not sufficiently recognized that an experimenter, if his conclusions are to be valid, should be a person of a logical habit of mind, patient in inquiry, ready to eliminate ruthlessly all extraneous factors, and cool enough to prevent his enthusiasm from influencing his critical faculties. Too many of the new-fangled systems pander to the cherished notion of unsuccessful teachers, that their failure to secure the results expected can be immediately remedied by the adoption of the latest "Method," which they study only perfunctorily, try for quite a short time, conclude that it is a fraud, and then adopt the next fad. One ought to state at the outset that, in speaking of eurhythmics, there is no intention of classing this system amongst the useless fads. It is just because one recognizes that its author has grasped firmly some vital principles which had been to some extent overlooked that it is advisable, for the sake of the system itself, that free criticism should be applied. A glance at school advertisements shows that the system has attracted much attention. But has every principal who professes to adopt it examined it critically, or does he or she introduce it into the prospectus with the desire of appearing up to date?

#### THE CLAIM OF EURHYTHMICS.

It requires some temerity to criticize a system which has received the imprimatur of so many eminent authorities. M. Dalcroze, in the authoritative exposition of the system, denies absolutely the right of anyone to pass a definite judgment on his methods who has not undergone the special training upon which he lays stress. By "definite judgment" he probably means adverse criticism, for the high authorities who bestow a benediction on the scheme do not seem to have taken a course in eurhythmics, or at any rate they do not say so. It was a happy thought to invent the word "eurhythmics"; "rhythm" is a fashionable word just now, especially in artistic circles. Eurhythmicians—this is the inelegant term they have invented for themselves—are not unduly modest in their claims. Prof. Sadler asserts that the Dalcroze system "has shown its value as a factor in general education," and that "musically and physically the results are equally wonderful." This may be true in particular cases,

but one would require some very definite evidence before accepting it as a universal fact.

All the apologists of the system are careful to emphasize their fear lest it should be regarded merely as a delightful form of physical training. Now if they were content to express the fact that eurhythmics provides splendid exercise for the body, no one except the most bigoted exponent of Swedish drill would venture to quarrel with them. But the eurhythmicians will not have it so; they claim that their pupils are taught to "realize" music itself in terms of bodily movement. This is a bold assumption, and the main point I wish to examine is whether the bulk of the best music is in need of, or is suited for, such realization. There is undoubtedly a great deal of music—some good, much of it bad—in which rhythm of the type which will bear translation into terms of bodily movement does predominate over the melodic and harmonic elements. March and dance tunes, the Finale of Beethoven's "Seventh Symphony," or the Scherzo of the "Ninth" furnish examples. But does it require "a half-hour's lesson three times a week, begun at the age of six," to enable a listener to appreciate such music? In fact, this movement—rhythm—instinctive as it is, seems to demand much less formal training than the rhythm of hearing, that which must be apprehended through the ear and not through the limbs—the rhythm, for example, which pulsates through the slow movement of Beethoven's "Ninth Symphony." It is not the case that the reason why so much fine music is unappreciated by the masses is because they will try to nod their heads or move their feet to it, and when they find that they cannot make their movements square with the music are thereupon disappointed and become apathetic? The truth is that the rhythm of hearing, as distinct from the rhythm of movement, has become more and more a feature of modern music, and to lay almost exclusive stress upon the latter appears a retrograde step. Movement-rhythm can almost be left to itself; rhythm of hearing requires considerable training before it can be adequately apprehended.

#### MUSIC OR GYMNASTICS?

As regards the eurhythmic movements themselves, it may be admitted that they are cleverly devised and are, as a rule, pretty to look at. But it is not easy to discover how the spectacular element helps towards the appreciation of the music. Music is apprehended through the ear, not through the eye, and not a few people prefer to hear the music of "Scheherazade" in a concert-room without the distraction of the ballet which it is designed to accompany. One cannot help suspecting that most of those who enthuse over eurhythmic demonstrations are more obsessed by the spectacle than by the educational value of the *mise-en-scène*.

The claim is made that eurhythmics develops

mental concentration, and no doubt it does. Some of the complicated exercises do strain the attention to such a degree that it is a question whether the pupil has any to spare for the music itself. The whole point is whether the mind is concentrated on something of value. The acquisition of the power of mental concentration over some considerable period of time is, in these days of shuttlecock curricula, badly in need of being stressed, but it is to be hoped we are past the age when the object upon which attention had to be focused was regarded as of no importance.

What one would wish to be more clear about is whether the claim put forward by eurhythmicians—that eurhythmics is an immensely powerful addition to the resources of musical performers and audiences—is really justified. If this claim is correct, then surely a performer who has been through the course—a course demanding much time—ought to play or sing much more rhythmically than before. Now such evidence as one has been able to collect, making due allowance for prejudice, does not warrant this assertion; and, if this is so, there seems to be little of value in the system except on the physical training side. Instances will probably be adduced in which the system has proved beneficial in stimulating the rhythmic sense. But, if eurhythmics is as potent as its admirers claim, then it ought to be effective in practically every case; this is denied by many teachers who have advised their pupils to test the value of the course. Personally I have an open mind on the matter, but it may be accepted as a fact that only a minority of teachers would take upon themselves the responsibility of recommending their pupils to spend two hours a week on eurhythmics.

#### IMPROVISATION AND SIGHT-SINGING.

Then as to the music which the pupils are supposed to realize in terms of bodily movement. With M. Daleroze himself at the piano there can be no question as to its quality. He has a perfect genius for improvisation, and accompanies all the movements, even the simplest, with music which is extraordinarily good. But, then, M. Daleroze is not ubiquitous, and it would be most unreasonable to expect that all his deputies could make equally good music. This seems to me a weak spot in the system, although it is only fair to state that improvisation is demanded only from those who intend to become teachers of the system. From the official handbook we learn that "it may not be realized by all people that everyone can be taught to play original music. There are cases in which the pupil is not naturally musical and has had no previous knowledge of piano-playing, but has learnt to improvise sufficiently well to give a good lesson in rhythmic gymnastics." This is an extraordinary claim, for the number of professional musicians who can improvise music worth listening to, especially when a fixed

rhythm is prescribed and a class is to be supervised at the same time, is extremely limited. Can any system whatever train a person "not naturally musical" to accomplish this really difficult task? Emphatically no, and anyone who has seen eurhythmic work carried on under the direction of anyone but the very best of the Dalcroze staff knows that the so-called improvisation will not pass muster as real music at all. Probably the musical taste of the pupils is not much vitiated thereby, because their attention is so occupied by the movements that they have but little to spare for the "music." We are told that "when the student has mastered only the chords of the tonic, dominant, and sub-dominant, quite charming little pieces can be played with these chords alone." We have heard some of these "charming little pieces," and desire no more of them.

As a "side-show," M. Dalcroze teaches sight-singing, using the fixed *doh* in a peculiar way. This is in opposition to all the best opinion in England, which is convinced that the movable *doh*, as applied to staff notation, is by far the most rational method and leads most quickly to the desired end. I have seen many Dalcroze demonstrations and have never heard the students sing the scales anything like so well in tune as they are sung in an ordinary elementary school. M. Dalcroze would be well advised to drop this section of the syllabus entirely, or to recast it radically.

#### CHARMING DEMONSTRATIONS.

These criticisms will doubtless appear ungracious to those who have been impressed by the fascinating spectacle afforded by the eurhythmic demonstrations. They will point to the pretty effect of a Bach Fugue or Beethoven Scherzo when translated into "plastics." But even here one may be forgiven for expressing the opinion that it cannot improve the musical taste of the pupils to hear the Fugue or Scherzo played at less than half its proper speed in order to fit in with the prescribed movements. If eurhythmics is to commend itself to musicians, music must be the first, not a subordinate, consideration. If the music has to be distorted in order to be realized in terms of eurhythmics, then clearly that music is diminished in effect by being associated with movements.

Naturally, eurhythmicians are ready to produce plenty of evidence that students who have taken the whole course have progressed musically. Quite so; but how much effort has it cost them? The *minimum* time expected to be devoted to eurhythmics is an hour and a half per week, and "these lessons can quite well be taken from playtime." Heaven forbid! Play is too much organized already. Now if the hour and a half were allotted to the class teacher, in addition to the time normally devoted to music-class work, I contend that it would be much better spent in some kind of "musical appreciation" work, in which

formal instruction in rhythm would not be neglected, but would by no means occupy the whole period of the lessons. Rhythm, even in its widest sense, is only one ingredient of music; melody and harmony are of equal importance. And what about the cultivation of the art of singing—using effectively the finest of all musical instruments, and one possessed by every child? If eurhythmics is to be introduced into the already overcrowded curriculum, what is to suffer? We are not going to sacrifice the children's playtime, neither can we afford to allow eurhythmics to take the place of singing, aural culture, or musical appreciation work. Call it—*pace* Mr. Dalcroze—"physical exercise," and let it take the place of Swedish drill if you like, then most musicians would welcome the change.

#### BODILY RHYTHM AND MUSICAL RHYTHM.

To sum up, it appears that the bond uniting eurhythmics and music is weaker than is generally admitted. Only a small number of musical compositions are suitable for realization in terms of bodily movement; any attempt to interfere with works of another type will serve no artistic purpose. The closest point of contact between eurhythmics and musical education seems to occur in the earliest stages in which the grammar of musical rhythm is taught by means of stepping, time-beating, and so forth. There is nothing inherently novel about this, but the movements devised by M. Dalcroze are more graceful than those formerly practised. This section of the work can be heartily approved, although some of the exercises are particularly complicated. All will agree with M. Dalcroze that a musical curriculum which limits its aims to the provision of a horde of soloists, whose sole title to recognition is the acquisition of an extraordinary technique, has little to do with real education; but whether there is much to choose between facility in performing intricate bodily movements and abnormal digital and vocal dexterity is a matter of opinion.

If attention has been directed in this article rather to the failings than the virtues of eurhythmics, it is not because the former predominate, but because the latter have been so extensively boomed by uncritical enthusiasts who have fallen under the spell of the magic personality of M. Dalcroze. What will happen to the system when his guidance has to be withdrawn is difficult to foresee. He is one of those horn teachers who would make any system work well. It is stated that "the Dalcroze system is in process of development; indeed, so long as its discoverer is engaged in actual teaching, it cannot be said to have reached its final form." This open-minded attitude leads one to think that eurhythmics in a modified form will yet play a useful part in modern education, even if this be of a more humble character than its devotees are at present ready to accept.

## THE BOND OF INTELLECT.

THE war has revealed the strength of this nation; it has also disclosed some sources of weakness. Let us investigate one of these sources of weakness—viz. the defective cultural relations existing between this and other countries. One hundred years ago we had in full measure the sympathy and goodwill of certain nations which in the present war have shown themselves—through large and influential sections of their populations—hostile to us, and which have, on the other hand, lavished sympathy, practical assistance, and encouragement on Germany, to whose crimes they appear to be wilfully and perversely blind. Other causes have no doubt operated; but there is quite abundant evidence to show that the principal cause of the estrangement of these nations from us and of their attachment to Germany has been the fact that, whereas formerly—through the seventeenth, eighteenth, and the early part of the nineteenth century—these nations were partners in a common culture with the Western nations, England and France, they have been attracted in the course of the nineteenth century within the orbit of German culture. It is true this attachment has not affected the issue; but it has prolonged the war and has been terribly costly to the Western Powers in blood and treasure.

There is, indeed, no lack of evidence to support the view (1) that close cultural relations unite nations and knit ties of sympathy between them that lead to political connexions and effects of the utmost consequence; (2) that the cessation of cultural relations leads to political estrangement.

Let us take one or two items of evidence in support of this view. The day after the Germans entered Helsingfors, *Hufvudstadsbladet* published an article entitled "Germany and We." The writer, having referred to the long-standing commercial relations between Finland and Germany, proceeds as follows:

But it was not solely in the domains of commerce that relations were made at an early date between our people and the Germans; the German Universities drew young Finlanders seeking education, and many of our men of note in the intellectual sphere laid the foundation of their knowledge in the high schools of Germany. Our religion, the Lutheran, we received from Germany, and in the Thirty Years' War Finns fought on German soil for the holy cause of liberty of faith. During the course of centuries our people received a constant stream of cultural impulses and knowledge from Germany. Our scholastic system is in its elements built on the foundations of German pedagogy, and the majority of our learned men have prosecuted their studies in German seats of learning.

It has been remarked that Helsingfors University is practically a German institution, and the men trained in Helsingfors University—politicians, jurists, doctors, journalists, clergy, and teachers—have been the pillars of Germanism in Finland. The commercial and industrial community have inclined to the Entente, but were powerless to prevent the pro-German intellectuals from concluding a commercial agreement with Germany, which involved the economic ruin of Finland.

It may be said that the article in *Hufvudstadsbladet* was inspired by Germany or was written under German influence. Let us, then, take the testimony of a Swedish writer, K. S. Ossiannilssen, who is strongly anti-German and pro-Entente. In *Vem Har Rätt I*

*Världskriget* he reminds the Swedes of their ancient friendship with England, and asks if they have forgotten the help and support their nation has received from England from time to time. He proceeds:

Why does Sweden hate England? Real causes are apparently non-existent. Prussia has committed a hundredfold worse aggressions against us, but continues to enjoy the goodwill which England has lost. Why does Sweden hate England? Why does Sweden despise what she does not know? For hundreds of years our study-routes (*studievägar*) have been principally southward. We study every change in Berlin's physiognomy, and but few travel to London. Forsooth, the Wilson boats are no equivalent for the Sassnitz ferry. We read German literature so closely that we knew every German farce, and that *Unter Hindenburgs Fahnen* is published for Swedish State schools where German is the language which is taught most thoroughly, or from the first to the sixth class. From Germany we have had Sweden's most popular book, the Catechism.

Yes, the land which has given us Shakespeare, Bunyan, "Gulliver," "Robinson Crusoe," Cowper, Burns, Byron, Shelley, Keats, Dickens, Thackeray, Tennyson, Browning, Kipling, Swinburne, Meredith, Hardy, Galsworthy, Wilde, Shaw, Carlyle, Carlyle, Darwin, Spencer, Huxley, in order to exemplify but one *genre*—the highest—of cultural activity, that land is now so forgotten in Sweden that we let the American, Jack London, prevent us from seeing England's great ones. England is in Sweden so completely unknown that all stories are believed, every slander finds ears, if only it blackens John Bull and comes to us from Prussia.

In a popular novel, "Livet maa Leves," published in Denmark some years ago, one of the characters, a lady of Danish descent, born and bred in Northern Schleswig, is reproached by her husband, a Dane, for her Danish Chauvinism. She indignantly refutes the charge. The wrong done by Germany to Denmark, she says, is as nothing when weighed in the balance with the benefits that Denmark has derived from German culture. She delivers a glowing panegyric on that culture, and concludes with a mild regret that great Germany should have grudged to little Denmark the narrow slip of Danish territory in North Schleswig.

In Estland Germany has exploited to the full the services rendered by her scholars to the Esthonian language and literature, as in China she exploits the learning of Faber, the greatest of living students of Chinese.

Even in Ireland, where, however, there has probably been no real sympathy in any class with Germany's cause during the war, it would be idle to deny that Germany has derived some sentimental advantage from her cultural prestige and from the interest taken by German scholars in the Irish language.

Again, in South America, Germany has had many sympathizers, and that although South America's fundamental civilization is Latin. But, as a writer in the *North American Review* pointed out some years before the war, Germany brought to South America her scientific culture, and did not appear there, as in this writer's opinion England had done, simply as a trading nation. The writer approved Germany's example and urged the United States to improve upon it and to establish American influence in South America on a foundation of the closest cultural relations.

If we have overlooked or neglected our cultural relations with other nations, this is a defect in our national organization for which a remedy should be sought. France, we may add, is taking measures to render her culture accessible to the whole world.

C.

## A TRIBUTE TO DR. E. A. ABBOTT.

"Men need not be envied who, in the voyage of their lives, are not silently conscious in meditative hours of their working days of some high figure who first placed chart and compass in their hands—both in respect of civil conscience for the day and definite thoughts of history, progress, perfectibility, and the rest."

VISCOUNT MORLEY—"Recollections."

ON the occasion of his eightieth birthday, December 20 last, Dr. Abbott was presented with an address of congratulation and goodwill signed by nearly four hundred of his former pupils and other friends. We take the following passages from the address:—

"On this your eightieth birthday we, the undersigned, desire, on behalf of your old pupils, the readers of your books, and your friends generally, to take the opportunity of expressing to you our high respect and affection, and our grateful sense of the debt which we and many others owe, in some cases to your personal guidance and influence, in others to the teaching of your books, and in all to the inspiration of your example as a single-minded and disinterested seeker after truth.

"We call to mind that the period of your head mastership was one of signal prosperity in the history of the City of London School. Yourself a classical scholar of the finest Cambridge type, you maintained and enhanced the reputation which the school had won under your predecessor as a place of classical education. At the same time it was due to your enlightened zeal as an educational reformer that the City of London School led the way among the public schools of the country in treating the English language and English literature as subjects of serious study for pupils of all ages.

"Not the least part of the stimulus which your pupils owe to you was the knowledge that their teacher was also a student. We may be permitted to offer our hearty congratulations upon the completion of the monumental work entitled 'Diatessarica,' in which you have given to the world of Biblical scholarship the final result of your patient and unremitting labour for the last twenty years. We wish to record with special gratitude that the habit of studying for yourself frankly and fearlessly, and carrying the process of open-minded inquiry as far as it will go, has always been conspicuous in your contributions to theology. Your writings have always been marked by the same resolute candour and thoroughness in investigation, the same spirit of profound reverence, and the same conviction of the inestimable value of the religious fact to be investigated.

"In wishing you all happiness during the evening of your life, we desire to signify our hope that you may have the satisfaction of witnessing the progressive acceptance of the ideals for which you have so long and steadfastly laboured."

Among those who signed the address were the Archbishops of Canterbury and York, the Bishop of London, Mr. Asquith, Mr. Balfour, Viscount Bryce, Mr. Fisher, the Heads of many Colleges at Oxford and Cambridge, Lord Curzon, Lord Moulton, Mrs. Humphry Ward, the head masters of many schools, and a number of other men and women distinguished in the fields of literature, science, or public service.

Mr. S. C. ROBERTS's "Story of Dr. Johnson," illustrated by contemporary portraits and engravings, will shortly be published by the Cambridge University Press. It aims at being an introduction to Boswell's "Life," and the author hopes, by means of a small book in which Boswell constantly speaks for himself, to win new readers for him amongst schoolboys and others who have not come under the spell of the greatest biography in the language.

## ART TEACHING IN WALES.

Report by Mr. Fred Richards.

THE Central Welsh Board last year asked Mr. Fred Richards, the well known artist, to visit the intermediate schools of Wales and prepare a report on the teaching of art. The report is now published by the Central Board, and may be obtained from its offices in Cardiff. In every respect the document differs from the ordinary official publication, save only that it is bound with wire in a manner somewhat inconvenient for handling. Its contents, however, are written with a vivacity and conviction all too rare in Government reports. The note of enthusiasm is never absent, and it will, we hope, be caught by the art teachers in England no less than by those for whom it is primarily intended.

The report falls into two parts, the first dealing with the condition of art in Wales and the second with the place of art in Welsh intermediate schools. There are also appended notes on School War Memorials, the Art Master and Civic Life, and books of reference for art teachers. On each of these matters Mr. Richards has something to say which is in the highest degree helpful and significant. The arrangement of the first two sections is in itself full of meaning, suggesting that the art of a nation is an inseparable part of its life. He affirms that no nation can be truly happy if its labours consist chiefly in supplying raw material for the craftsmen of other countries. In Wales there are practically no manufactures. Hence the people live among imported surroundings, often ugly and cheap and never expressive of any national feeling. As a result the general perception of beauty is dulled, the desire for it languishes, and the people tolerate the defacement of beautiful natural surroundings by squalid towns with ugly buildings, and grotesque advertisements are permitted on the railways and roads. Mr. Richards tells us that such surroundings are fatal to art, since art is not mere drawing or painting. It is, as Prof. Lothaby says, "the right way of doing the right things; and the evidence thereof is beauty." To teach this during the impressionable years of youth is the function of the art teacher, who must be helped by the community, as he in turn can help the community to attain the beautiful.

Applying these broad principles to the art teaching in the thirty schools which he visited, Mr. Richards finds too many evidences that art is still regarded as an "extra." He urges that there is a fatal lack of co-operation between the elementary school, the intermediate school, and the art school. We suggest that this lack and its results extend to all branches of Welsh education and the proper remedy is to bring all forms of education into proper working relationship with each other. It is clearly wasteful to have the three grades of education carried on under three different authorities. One controlling body, exercising helpful and sympathetic supervision over all kinds of education in the Principality, and ready to recognize the claims of private effort, could speedily develop a truly national system. As things are, Mr. Richards finds that few of the schools pay proper attention to art training, either directly or indirectly. The direct training suffers from the want of qualified teachers, the indirect from the prevalence of ugly school buildings, poor pictures, and inartistic wall decorations. It is suggested that a few good pictures hung on walls which are not always coloured in "bathroom green" are better than the existing practice. The relation between art and other subjects should be closer than at present. It was found that sewing, embroidery, and handwork were often taught independently of the art class, and that the drawing of diagrams in botany was sometimes excellent in schools where the general art work was poor. The moral of this is that drawing and painting should be taught in connexion with structure and purpose, and not merely as a matter of vision and execution.

On school war memorials, some timely counsel is offered, and we hope that it will be noted, since some of the projects for such memorials are grotesquely unworthy. J.

*“THE HIGH”--OXFORD  
WITH SOME VERSES*

BY

*FRED RICHARDS, A.R.E.*

*THE EDUCATIONAL TIMES*

*Had I the gift of song  
I'd tune my lute to Isis.*

*. . . . .  
My notes should praise  
Her spires and towers.  
I'd sing of lawns  
And college halls,  
Of 'questered close  
And tortuous ways  
And patterns that  
Her turrets make  
Against the sky ;  
But for the street  
They call "The High"  
My choicest note  
Aloud I'd cry.*

*. . . . .  
For one brief day  
I'd take the dons  
Away from all  
Their musty books,  
Those cloistered dons  
O'er steeped in lore  
About the past,  
About "Before" ;  
Those dons who live  
To love the dead,  
While all around  
Is life instead ;  
Whose chief delight  
Seems but to strip  
The wrappings off  
The mummied yore.  
Methinks they oft  
Do nothing more.*

*I feel impelled  
To shout aloud  
"To-day ! To-day !  
Steeped in the sun  
That gilds afresh  
With new desire  
The city lives  
While you expire."*

*. . . . .  
I'd take them up  
On Magdalen top  
And let their gowns  
Wave in the breeze,  
Wave to the sky  
Above them blue,  
Wave to the town  
Beneath them, too.  
. . . . .  
Then would they feel  
Its magic power,  
And sweet advice  
The gods would give—  
"Learn from your books,  
But learn to live.  
The city cries  
Aloud to you—  
See what the hand  
Of man can do,  
Go ye and build  
A city, too ! "*

*Fred Richards.*

## SUBJECTS AND METHODS.

### Practical Education in Secondary Schools.

THE Head Master of Oundle School, Mr. J. W. Sanderson, is well qualified to speak on the subject of practical education, since at Oundle the sixth form in engineering is larger than the sixth in classics. Addressing the members of the Technical Institute, he advocated the introduction of studies allied to industrial work. The life of the school should not be too widely separated from the working life of the community, and the teaching of natural science in schools should be based on its application to industrial and social life.

He was of opinion that the larger kinds of experimental work could be done both in elementary and secondary schools. Every large school ought to have an experimental laboratory and a standardizing laboratory, a miniature of the National Physical Laboratory. Chemistry might be treated in a similar way. In addition to some of the standard chemical operations a school might undertake such work as the extraction of by-products from coal tar, the manufacture of liquid air, and the analysis of metals. These larger tasks would be more interesting and inspiring than the natural science usually taken. They would rouse the imagination of the pupil and excite his inventive powers. With apparatus, or rather plant, of this practical kind the masters and boys could undertake together some work in the testing of materials and in elementary forms of research.

Biology he regarded as an indispensable subject, since it touched all parts of social life. It should rank with mathematics and languages as a study, and should be something very different from the so-called nature study now in vogue—a mere travesty of biology born of a desire for cheapness. The proper study of biology called for expenditure, but for nothing beyond the powers of a modern city. Such a city should provide its schools with a biological laboratory, aquarium, vivarium, and garden. These would provide opportunity for studying the subject on a broad basis, and much valuable work could be done in the way of agricultural surveys, analysis of soils, experiments on crops, extraction of fat and sugar, and other real tasks.

For practical work it was necessary to have a large and well fitted workshop. There the boy could learn something of the craftsman's skill and gather something of the craftsman's pleasure in his work. He could learn to be exact in his work and could find an opportunity of developing whatever skill of a mechanical or inventive character he possessed. This would demand a well finished school works, with a machine shop, a small foundry, a carpenter's shop, an engine house, and a smithy.

The school ought not merely to be a place where a boy came to learn lessons. Too much time was often spent in what might be termed tool sharpening, without learning the use of the tools. Mathematics, languages, and the elements of natural science were largely tools. Only a limited number of boys could employ those tools in an independent way. The school would produce a few mathematicians, a few great classicists, a few students of philosophy, but the greater number would turn their inventive faculties to other subjects. There ought also to be formed a literature department. The aim should be to establish a real literary workshop, organized on the plan of a museum, including a large hall for library, an art room, a language section, and another for geography, ethnology, and philosophy. Some of the work at least should bear upon the questions of the day or those of the immediate future, so that boys might go out into the world with their minds attuned to the inquiries and progress and changes of the time.

### An Open-air School for Plymouth.

THE Plymouth Education Committee has issued a pamphlet describing the work of an open-air school opened at Little Efford in September last. The aim of the project is thus set forth by the Committee:—

“It is the desire of the Plymouth Authority to establish and maintain an important place in this preventive and remedial work, for not only do they realize that ‘whatever you would have appear in a nation's life must first be put into its schools,’ but also that the sole hope and prospects of a delicate child must often rest almost entirely in the hands of an Education Authority.”

The open-air day school at Little Efford represents only the initial stage in the realization of this policy. The institution is established in a healthy situation, commanding admirable views of the Plym estuary. It provides accommodation for fifty boys and fifty girls, whose education is conducted as much as possible under open-air conditions. Four large classrooms have been erected in the grounds. They will open either at full length or sectionally upon all sides except the north. No school work is taken in the house, which is utilized for administration, dining accommodation, medical inspection, and as a residence for the head mistress and certain members of the staff who have elected to live on the premises. Up to the present the age limits of children admitted are from eight to fourteen years, but it is the hope of the authority that later the open-air facilities will be available for children of all ages. Admissions are in the hands of the school medical officer, who has each child under his constant supervision. No child is admitted who is suffering from tuberculosis or other infectious disease, the only cases regarded as suitable being those of children affected by general debility, anæmia, malnutrition, mild nerve or heart disorders, or those convalescent from serious sickness.

### Should we Teach German?

IN a recent issue the *Liverpool Journal of Commerce* contained an article on this question from the business man's point of view. After dealing with the arguments that public sentiment is opposed to the teaching of German, that German may become the instrument of renewed propaganda, that German is the vehicle of the pernicious views of Treitschke and Bernhardt, the writer urges that no man or woman of real intelligence need fear the infection of ideas or timidly refuse to hear the other side in a case.

On the commercial value of German, he says:—“Commerce calls for a study of German. The German language is the medium of speech and commercial intercourse in countries other than Germany. German is the spoken language through Austria. It is the language of commerce. German is a ready alternative to the Magyar in Hungary. In Russia, throughout the central and western provinces, it finds favour as the spoken and written language more so than the national tongue. If, therefore, we as a commercial nation desire to establish commercial relations with that vast German-speaking population in the heart of Europe, we must instruct our youth in the study of the language intensively, more so than in the past, when we were at the disadvantage of having too many ‘cheap’ German clerks in our midst, and so rendered an extensive outlay in education unprofitable to the student. If British commerce is to penetrate into and seek to displace German commerce in Europe, or in any part of the globe, a perfect knowledge, technical and commercial, of German is a first essential to success.”

MR. J. A. PALMER is about to resign the post of Secretary for Education in Birmingham. He has served the former School Board as Clerk and the present Committee as Secretary for a period of twenty-one years.

## CHRONICLE OF EDUCATION.

- 21 Nov., 1918.—Royal Assent given to the School Teachers (Superannuation) Act, 1918. (See Blue Book Summary.)
- 14 Dec.—General Election. The Right Hon. H. A. L. Fisher, President of the Board of Education, elected, with Sir Martin Conway, to represent the combined English Universities of Birmingham, Bristol, Durham, Liverpool, Manchester, and Sheffield. Majority, 478. Total poll, 2,627.
- 24 Dec.—Draft of Statutory Rules and Orders in connexion with the School Teachers Superannuation Act, issued by the Board of Education with the consent of the Treasury. To be cited as the School Teachers Superannuation Rules, 1919. (See Blue Book Summary.)
- 1 Jan., 1919.—Opening meeting of the Conference of Educational Associations at University College, Gower Street, London. Address by the President of the Board of Education on "The Art of Keeping Alive." Chairman, Mr. Augustine Birrell. (See Supplement.)
- 2 Jan.—Joint Session of the Head Masters' Conference and the Incorporated Association of Head Masters in the Guildhall, London.
- 6 Jan.—Annual Meeting of the Association of Directors and Secretaries for Education at the County Hall, London. Address by the President, Mr. W. A. Brockington, Director of Education for the County of Leicester.
- 11 Jan.—Announcement of new Ministry. Mr. H. A. L. Fisher reappointed as President of the Board of Education, with Mr. Herbert Lewis as Parliamentary Secretary.

## SECONDARY SCHOOL TEACHERS' WAR RELIEF FUND.

THIS registered war charity, originally promoted by the I.A.A.M., is managed by a committee elected by the various associations representing secondary education. The benefits of the fund are open to all secondary-school teachers, irrespective of sex or membership of any association, and their dependents. The fund has been maintained up to the present by guaranteed subscriptions, donations, and proceeds from concerts, dramatic performances, and other functions organized at various schools.

Valuable and much-needed help has been given from the fund to many families who would otherwise have suffered great hardship. Every case of need brought to the notice of the committee has, so far, received adequate help. The following is a brief summary of the present position of the fund:—

- Deaths recorded, 320.
- Cases fully inquired into, 63.
- Emergency grants made, 36.
- Cases in which regular allowances have been made, 38.
- Annual commitment in allowances only, £508.
- Capital required to maintain these allowances for twenty years on the basis of a 4 per cent. annuity, £6,670.
- Subscriptions received (November 1918), £7,354.
- Capital in hand (November 1918), £6,337. 10s.
- Estimate of number of teachers in secondary schools serving, 2,750.

So far the fund has not been called upon to help disabled school teachers, but many claims may be expected when these men are finally disbanded from the Army. No estimate is possible as to what sum will be required, but it is hoped that subscriptions will continue until sufficient capital has been secured to meet all requirements.

## PERSONAL NOTES.

MR. WALTER DURNFORD, recently elected Provost of King's College, Cambridge, in succession to Dr. M. R. James, has been awarded the Grand Cross of the Order of the British Empire. Sir Walter, as he may now be styled, was for many years a successful and popular Eton master, leaving to become Vice-Provost of King's. In Cambridge he has taken an active part in University and municipal life, serving on many academic bodies and acting as Mayor of the borough for two years. He is a member of the governing body of Eton College and represents the University of Cambridge on the Teachers Registration Council, of which body he is the Honorary Treasurer.

BRIGADIER-GENERAL G. H. GATER has been unanimously appointed by the Lancashire Education Committee to the post of Director of Education, in succession to Dr. Lloyd Snape. General Gater was educated at Winchester and New College, where he obtained second-class honours in modern history and a diploma in education. For about nine months he was in the office of the Oxfordshire Education Committee, and he went from there in May 1912 to be Assistant Director of Education for Nottinghamshire. When war broke out he at once applied for a commission, and was made a second lieutenant. He has had 3½ years' active service in Gallipoli, Egypt, and France, has twice been wounded, and has been awarded the D.S.O. and bar. He is about thirty-two years of age.

THE HONOURS LIST.—Sir L. Amherst Selby-Bigge, Permanent Secretary to the Board of Education, has been made a Baronet, while Mr. H. W. Orange has received a knighthood, Mr. Oates and Mr. Barker being made Companions of the Bath. All four recipients of honours are presumably receiving well deserved recognition for their services in connexion with the Education Act and the Superannuation Act. In the list issued on January 2 the names of several educationists appear. Amongst those receiving the C.B.E. are Mr. Alfred Eichholz, M.D., Senior Assistant Medical Officer, Board of Education; Mr. James Clerk Maxwell Garnett, Principal of the Municipal College of Technology, Manchester; and Mr. Herbert John Simmonds, O.B.E., Assistant Secretary to the Board of Education and Secretary to the Advisory Committee of the Military Service (Civil Liabilities) Committee. The O.B.E. has been conferred upon Mr. George Tanner Chivers, Head Master of the Dockyard School, Portsmouth; Mr. Samuel Glynne Jones, Assistant Inspector, Board of Education; Miss Kate Manley, Woman Inspector of Domestic Subjects under the Board of Education; Mr. James Edward Singleton, Sub-Inspector, Board of Education; and Mr. James Cameron Smail, M.B.E., Organizer of Trade Schools under the Education Committee of the London County Council.

THE LATE MR. G. W. S. HOWSON.—It is with great regret that we announce that Mr. George William Saul Howson, Head Master of Gresham School, Holt, Norfolk, died at Holt on Tuesday, January 7. Mr. Howson belonged to a family of schoolmasters. Son of Mr. W. Howson, Head Master of Penrith School, and a grandson of the Rev. J. Howson, who was Second Master at Giggleswick School, he was educated at the latter school, from which he proceeded to Oxford in 1879 as a scholar of Merton College. He obtained a First Class in the Final Honours School of Natural Science in 1883 and took his M.A. degree in 1886. After serving as an assistant master, first at Newton College and afterwards in Uppingham School, he was appointed Head Master of Gresham School in 1900. Under him the school made rapid progress, especially in science teaching. Mr. Howson was a keen sportsman, his favourite pastimes being riding, fives, and trout fishing. He was a member of the Cavendish Club, and unmarried.

## EDUCATION ABROAD.

"Let us conceive of the whole group of civilized nations as being for intellectual and spiritual purposes one great confederation bound to a joint action and working towards a common result; a confederation whose members have a due knowledge both of the past out of which they all proceed and of one another."

—MATTHEW ARNOLD.

### The Intellectual Entente.

The above-quoted passage is especially appropriate just now, for the one chief note in educational development abroad, as at home, is a desire to establish permanent intellectual relations between the civilized races of the world. The progress of the movement is summarized in the report of the Entente Committee of the Royal Society of Literature. An Anglo-Swedish Society has been formed under the auspices of the Committee, and its inaugural meeting was held in October last, when suggestions were framed for the co-operation of the two countries in educational work. Earlier in the year the Committee had arranged, with the assistance of the British-Italian League, a visit to British Universities of a delegation of professors from the Universities of Italy. This visit has already begun to bear fruit, both in the development of Italian studies in this country and in the recent establishment of English Chairs in Italy; in the University reforms in that country, instituting post-graduate courses for foreign students; even in the remodelling of medical education in Italy. Before the war the French Government had given their support to educational institutes, directly associated with French Universities, established in London, Madrid, and Florence for the express purpose of making French life and culture better known, and a scheme is on foot for the establishment of similar British institutes in Paris, Brussels, and Rome.

### The Study of Russian.

In 1917 a Russo-British Bratsvo, or Fraternity, was formed, and the annual conference of this body was held early in January at 26 Chester Square, S.W., under the chairmanship of Prof. Burrows, of King's College.

Prof. W. J. Sedgefield, of Manchester University, submitted a scheme for a school of higher Russian studies. He urged that, unless the study of Russian was at once organized on a national basis, this country would not hold its own in Russia during the future. He suggested that the proposed school should be independent, while maintaining close relations with Universities which had departments of Russian. The aim was to supplement the work of these departments by providing courses of advanced study, facilities for research in Russian subjects, and by rendering accessible to British students the work done by Russian specialists in the various branches of learning. The dissemination of information about Russia and the furnishing of such expert knowledge as was required by Government departments would be included in its work. The discussion on these proposals turned mainly on the question of the desirability of setting up a new and independent school, on the one hand, or of enlisting the efforts of the various Universities. Sir Paul Vinogradoff thought that the best plan was to develop the project already started at King's College and make it a national enterprise, aided by the Universities of Oxford and Cambridge.

### Overseas Teachers' Conference.

The London County Council are arranging a special educational programme for the League of the Empire Conference, from February 8 to February 22, for the soldier teachers now here from the overseas Dominions. Demonstrations will be given on the newest methods of London education, and the schools visited will range from an infant school to the Poly-

technics. The trade schools, a central school, and certain special schools will be inspected.

The opening meeting of the Conference will be on February 8, at 3 p.m. A series of visits to places of historic and other interest not usually open to the public will also be arranged in connexion with the Conference. Any oversea teachers who wish to take part in the Conference are invited to send their name and address to the Hon. Secretary, League of the Empire, 48 Catherine Street, Buckingham Gate, Westminster, S.W.1.

### A Medical Entente.

The presence among us of many distinguished American doctors has led to the establishment, through the efforts of Lord Eustace Percy and Captain Sorapure, of an Inter-Allied Fellowship of Medicine, with Sir William Osler as its first President and Sir Arbuthnot Lane as its Treasurer. Sir William is a living embodiment of the Entente between ourselves and America, while Sir Arbuthnot Lane has won great honour among our French allies. Advanced courses of study following graduation have already been arranged in Paris, and it is intended to establish similar courses in London. A free interchange of graduate students is thus possible. The heads of the Dominion and American Army Medical Corps are granting special leave extending over several months, according to length of service, for the purpose of enabling Army medical officers to follow a course of study in this country. The work, which has always bound together the members of the medical profession in all countries, is thus being strengthened, and it is to be hoped that the new Fellowship of Medicine will become truly international.

### The New Prussian Education.

The revolution in Germany appears to have been followed promptly by active steps in the direction of school reform. A prominent Socialist (Herr Hänisch) became the Minister for Education, with responsibilities in the matter of the relations between Church and State and in regard to all forms of learning. He set about his task with great vigour, and pronounced, in less than a month, a comprehensive statement of reform. Religion and clerical influence are wholly excluded from the schools. Unsectarian moral teaching is ordered. Teachers are endowed with the right of self-government, a boon which is perhaps lessened by the fact that the pupils are to have the same right. History teaching is to be purged of Chauvinism, and the long-talked-of *Einheitschule*, or common school for all classes and social grades, is to become a reality. The former autocracy of the *Rektor* is abolished, and teachers are encouraged to discuss their work and offer suggestions on educational policy. A list is to be prepared of vigorous persons likely to infuse energy into the administration. The leaving examination from the secondary schools will be reformed and the number of examinations cut down. A number of the royal castles are to be appropriated as training colleges, boarding schools, and museums. Physical drill is no longer to have a military bias. Teachers are to be released from the Army forthwith, and all who have been punished for their political or religious views are to be reinstated. Experienced teachers are to be appointed to local inspectorships, and a teacher has been appointed as Advisor to the Ministry of Education. University professorships are thrown open to Socialists. A scheme of national high schools is to be established, linking up with existing schools, and the technical high schools are to be reorganized. Teachers in Universities are to have an improved financial standing and their freedom of opinion is to be secured.

If these sweeping changes are carried out we shall have reason to regard Prussia as having one of the most enlightened systems of education in Europe. Certainly the changes proposed by the new Minister embody many of the reforms which we in England have long sought and only partially attained.

## SCHOOLS, COLLEGES, AND UNIVERSITIES.

### University of Manchester.

At a meeting of the Council of the University, the Vice-Chancellor reported that during his tour in America he had met Mr. Albert Kingsbury, a Philadelphia man of business, who felt that he owed so much in his business to the scientific researches of the late Prof. Osborne Reynolds that he wished to endow in his memory a Scholarship or Fellowship in the University where his researches were conducted. Mr. Kingsbury had accordingly presented the sum of £2,000 to the University of Manchester for the endowment of an Osborne Reynolds Scholarship or Fellowship.

This, said the Vice-Chancellor, is a remarkable example of the way in which American business men realize the debt which they owe to pure science, and also of the manner in which University endowments appeal to their imagination as having a claim upon their business profits. There is scarcely an American University in which abundant examples of this spirit may not be found. It would be gratifying if more British manufacturers would show that they also realize the service rendered to industry by the Universities.

### Manchester College of Technology.

THE Manchester Education Committee have decided to press strongly for a substantial increase in the annual maintenance grant paid by the Board of Education in respect of the work carried on at the Municipal School of Technology. The attention of the President of the Board of Education, it is proposed, should be drawn to the necessity for an extension of the buildings of the college in order to provide for further facilities for advanced technological and research work. The Manchester Education Authority is already in possession of a site which could be utilized for the purposes of carrying out the proposed extensions, which are estimated to cost approximately £200,000. It has also been resolved that, whilst the Education Committee agree to submit these proposals to the President of the Board at once, no specific application be made to the President of the Board of Education for an actual building grant for University work until (a) a consultation has been held concerning the scheme between Manchester University representatives and representatives of the Manchester Education Committee; (b) a scheme of extension of the buildings of the Manchester Municipal College of Technology has been approved by the Education Committee and the City Council; and provided that such application does not confer upon the proposed extension any priority of commencement in comparison with the requirements of other branches of the Committee's educational scheme.

### The Universities' Parliamentary Representatives.

THE results of the University elections for members of Parliament are as follows: Cambridge returned its old members, Mr. Rawlinson (2,034) and Sir Joseph Larmor (1,986); the Independent candidate, Mr. W. C. D. Whetham, receiving 1,229 votes, and the Labour candidate, Mr. J. C. Squire, 641. Mr. Squire forfeits his deposit of £150, as he did not secure one-eighth of the votes recorded. For the Welsh University, Mr. Herbert Lewis was elected with 739 votes as against 176 recorded for Mrs. Mackenzie, who ran in the Labour interest. The London University result showed that Sir Philip Magnus retains the confidence of the electors, as he came out on top with 2,810 votes. Mr. Sidney Webb followed closely with 2,141. The votes for the other candidates were as follows: Somerville, 885; Herringham, 715; Nordon, 210. The combined English Univer-

sities result was remarkable from the fact that Sir Martin Conway, who was lowest of the four candidates in the first count of direct votes, on the allocation of the alternative votes, under the proportional representation scheme, was elected member with Mr. H. A. L. Fisher, who, as was generally expected, headed the poll.

### The University of London and Teachers.

THE Higher Education Committee of the London County Council have recommended the following scheme of training to meet the needs of University war students who intend to become teachers. Clauses (1) to (6) are to be submitted to the University of London and the Board of Education for approval, and Clause (7) will also be submitted to the Board:—

(1) By "war student" is meant any man or woman student whose normal course of training has been rendered impossible by war service.

(2) A candidate for the shortened course mentioned below will have to satisfy the University that he is intellectually capable and the college that he is fitted by character and *ingenium* to be trained as a teacher. The "special cases" referred to in the next paragraph concern men who have really good capacity and have had a satisfactory education, though they have not happened to fulfil the technical matriculation requirements.

(3) It is assumed that in every case the matriculation or its equivalent has been already passed, but in special cases exemption should be granted if the Board of Moderators for Matriculation are convinced that at least matriculation standard has been reached. It is proposed, however, that any special demand, such as the inclusion of Latin, should be waived in the case of war students at intermediate and final stages.

(4) The intermediate examination generally should be resolved into an interview of the candidate by a Board of Moderators, who shall have power to pass for the final course such candidates as give evidence of fitness for the work.

(5) In the academic course for the Science or Arts degree, the University should accept a full two-years' course instead of a three-years' course, on the condition that, in addition to the two years of academic work, the candidates follow a recognized course of pedagogical instruction lasting not less than three months, and in addition devote a period of not less than six weeks to practical training in schools, which may be taken during the long vacation of the academic course.

(6) On the side of professional training, the following two sections set out the proposals which the Board of Education are asked to accept:—

(a) The training period may be either before or after the academic period of two years; but there are overwhelming reasons for having it, wherever possible, after rather than before. Everything depends on the date at which war students can take up the work.

(b) In the case of those who take the professional before the academic course, the period must include not less than the final three months of the University session. In the case of the others it must include not less than the complete term following the term in which the final examination is held—i.e. it would include the remainder of the autumn term in which the finals are held and the whole of the succeeding spring term.

(7) In the case of war students who cannot afford a University course, but who have academic attainments accepted as satisfactory by the college Board of Examiners, the college could provide a one-year professional course, beginning at any date, and the Board of Education should be asked to recognize such a course by granting a full teaching certificate to all who complete it satisfactorily and pass an examination by the college Board of Examiners on which the Board of Education is represented.

# THE EDUCATIONAL TIMES.

A REVIEW OF IDEAS AND METHODS.

(Founded 1847.)

## PROSPECTUS OF NEW SERIES.

THE EDUCATIONAL TIMES, founded in 1847, and until recently the official organ of the College of Preceptors, has been transferred to fresh hands. It will be carried on in future as an independent magazine appearing on the 15th of each month. The new series will begin on the 15th of January, 1919.

Under the new owner and editor the EDUCATIONAL TIMES will not be controlled by any institution or association of teachers, nor will it be bound to support any particular doctrine or teaching method. It will be completely independent and will seek to offer to its readers full and impartial information on all progressive movements in education at home and abroad. The Editor is assured of the help of well-known writers of authority, and no effort will be spared to make the EDUCATIONAL TIMES at once indispensable and interesting.

### SPECIAL FEATURES.

Among the special features of the EDUCATIONAL TIMES will be:—

1. **Notes and Comments**, dealing with current events.
2. **Articles** on education and on social questions relating thereto.
3. **Chronicle of Education**, giving a diary of events for ready reference.
4. **Blue Book Summary**, giving the chief points of all official publications relating to education and allied topics.
5. **Personal Notes**.
6. **Subjects and Methods**. Special articles on the curriculum, with notes on teaching method and advice as to textbooks.
7. **Schools, Colleges, and Universities**. A record of news.
8. **Association News**, recording the doings of educational societies.
9. **Education Abroad**. Notes on the educational systems and teaching methods of other countries, with news of current events.
10. **Reviews**. All important works on education and social philosophy will be reviewed with care, and textbooks intended for students and for school use will receive special attention. Essay reviews and notices signed by the writers will be a feature of this section, which will include also reviews of works of fiction and of books suitable for school libraries or prizes.

Supplements will be issued frequently, each dealing with a chosen topic or important event.

### PRICE.

The price per copy is Sixpence net. By post Eightpence.  
 Subscription for one year, including postage, Seven Shillings.  
 Subscription for three years, including postage, One Pound.

### ADVERTISEMENT RATES.

Whole Page ...	£5 5s. 0d.	Per inch, narrow column	6s. 0d.	} Prepaid.

## BLUE BOOK SUMMARY.

### Pensions.

THE School Teachers (Superannuation) Act, 1918, has now been issued, and also the Statutory Rules and Orders which govern its working. Both documents are obtainable from the Government Stationery Office. Together they furnish a pensions code which may be summarized as follows:—

1. The Act comes into operation on April 1, 1919. Teachers eligible by service who retire after that date will be entitled to receive the new pensions.

2. The minimum retiring age is sixty, although a gratuity may be granted before that date in cases of breakdown.

3. The full pension is earned by thirty years of recognized teaching service, but a woman who retires on marriage, informs the Board within three months, and later returns to teaching, need only serve twenty years.

4. The sum received on retirement is made up of two parts—viz. an annuity and a cash payment. The annuity is reckoned by taking the average annual salary during the last five years of service. One-half of this amount, or one-eighth for every year of recognized service—whichever is the less—will be paid in quarterly instalments. The cash payment is one and a half times average salary, or one-thirtieth thereof for every year of recognized service, whichever is the less. This amount is paid to the teacher in a lump sum on retirement. Thus a teacher whose average annual salary during the last five years of thirty-six years' service is £400 may retire at sixty with a pension of thirty-six eightieths of £400, or £180, paid quarterly, and he will receive also a cash payment of thirty-six thirtieths of £400, or £480.

5. A teacher who breaks down in health may receive a gratuity of one-twelfth of the annual salary for each year of recognized service.

6. The legal representatives of a teacher who dies in recognized service after not less than five years of such service may receive a gratuity of an amount equal to the average salary or to the sum which might have been paid to the teacher as a disablement gratuity had he broken down in health and not died. The greater of these two amounts will be payable in such cases. No death gratuity will be paid in respect of teachers who are over sixty at the date of the beginning of the Act or of those who have not satisfied the Board as to their physical fitness.

7. The teaching service which entitles to pension or gratuities must be of the nature described in the Act and Rules. Briefly it may be said that all service in grant-aided schools will count, provided that the service is above the pupil teacher stage. This brings in the "uncertificated" teacher and the teacher of special subjects. Service in other than grant-earning schools will count as recognized service only under certain conditions, the most important of which is that the school must not be carried on for private profit. It must be open to inspection by the Board and be shown to be efficient, must have a governing body and a trust deed or scheme, must accept the Board's nominees on the governing body up to three in number, must show that its resources are insufficient to maintain a satisfactory pension fund of its own, and must be ready to satisfy "such other conditions as may be prescribed as necessary or desirable for securing the public interest." This last phrase is elucidated in the Rules, wherein it is laid down that the governing body must make suitable and reasonable arrangements approved by the Board for co-operating in the public system of education by admitting as day pupils or boarders either pupils nominated by Local Education Authorities or pupils nominated by governing bodies of schools in receipt of grants from the Board in order that they may receive the type of advanced or special education advantageous to them. Such nominated pupils are to pay fees no greater than those of other pupils, no higher standard of entrance attainment is to exacted, nor are they to be refused on grounds of religious

belief. Further, the governing body must be ready, if requested by the Board, to admit graduates for courses of training in teaching and to permit teachers from other secondary schools to visit the school for the purpose of gaining enlarged experience. Finally, the governing body shall furnish such returns and information as the Board require.

8. Under the conditions just described, a school which is not grant-aided may rank as a place for recognized service, and of the period qualifying for a pension at least ten years must be spent in recognized service. The Board takes power under the Act to count for pension purposes any employment, whether as a teacher or otherwise, which the Treasury, on the Board's recommendation, may agree to include. But ten years of recognized service is indispensable.

9. Schools not now grant-aided which become grant-aided before April 1, 1924, will be recognized service schools.

10. The war service of teachers counts for the Board's pension, and absence on sick leave counts also up to one year, under certain conditions laid down in the Rules.

F.

### Education Conferences and Local Authorities.

It has sometimes happened that Local Education Authorities have wished to send representatives to conferences on education, but they have been unable to pay the expenses out of public funds. Under the Act of last year the necessary power was given, and the Board have issued Statutory Rules and Orders (1918, No. 1600) containing the necessary regulations as follows:—

(1) A council having powers under the Education Acts may subject as herein provided make reasonable payments for actual travelling expenses and subsistence in accordance with the scale adopted by the council concerned to persons nominated by the council to attend a meeting or conference held for the purpose of discussing the 'promotion and organization of education or educational administration.

(2) The expenses defrayed by a council under the said section and incurred by them in paying subscriptions towards the cost of or otherwise in connexion with any one meeting or conference (exclusive of expenses incurred in connexion with the attendance of persons nominated by the council at the meeting or conference) shall not exceed, except with the sanction of the Board of Education—

(a) the sum of two guineas; or

(b) a sum calculated according to the population of the area in respect of which the council has powers under the Education Acts as ascertained by the last preceding census at the rate of two shillings per thousand of that population; whichever of these sums is the greater.

(3) A council having powers under the Education Acts may pay as a yearly subscription to any association or body which holds or organizes meetings or conferences for the purpose of discussing the promotion and organization of education or educational administration a sum not exceeding ten guineas if the population of the area of the council as ascertained by the last preceding census exceeds twenty thousand and a sum not exceeding five guineas if the population as so ascertained does not exceed twenty thousand.

### Average Attendance.

In Circular 1084 the Board announce that from April 1 next the average attendance in each department of a public elementary school will be reckoned for the twelve months ending on March 31 each year. No attendance may be reckoned for children under three years of age or over the age limit provided by the Code.

The sum of the average attendance of all the departments in the area will form the average attendance in public elementary schools maintained by the authority, and the substantive grant for elementary education to the authority will be calculated, so far as it depends on average attendance, upon that sum.

### Release of Teachers.

The Board have issued a circular (1073b) to Local Authorities, with schedules on which are to be set down the names of teachers in the forces. The Board undertake to try to secure the early release of such men, but are not in a position to give any indication of the date by which individual teachers will be released.

# MILLS & BOON'S NEW BOOKS.

MILLS & BOON will be happy to receive applications for Specimens from Heads of Schools and Teachers of special subjects. New Educational Catalogues sent post free.

## ENGLISH GRAMMAR, WITH ANALYSIS AND PARSING.

By H. G. SMITH, B.A., Senior English Master, King Edward's School, Camp Hill, Birmingham; and G. H. BALL, M.A., Head Master, King Edward's School, Camp Hill, Birmingham. Second Edition. 1s. 6d. net.

## ENGLISH COMPOSITION, INCLUDING PRÉCIS AND PARAPHRASE.

By H. G. SMITH, B.A., and G. H. BALL, M.A. Second Edition. 1s. net.

These books have been written with a view to providing a course in English Grammar and Composition suitable for use in secondary schools. They aim at explaining the fundamental rules of the language and making clear the difficulties which teachers of Latin and French experience in imparting a knowledge of their subjects to young boys.

The above two books are issued in one volume entitled "English Grammar and Composition," and form a three years' course in English. 2s. net.

## POETRY FOR BOYS.

By STANLEY MAXWELL, M.A. Second Edition. 1s. 6d. net.

A collection of poems of established literary merit printed in bold type.

"Such is the superiority of Mr. Maxwell's collection over every other similar kind of work we are acquainted with that not the least apology is due for its appearance. The selections have been made with a fine discernment of what will appeal to the interest of boys."—*Secondary Education*.

## FRANÇOIS CHANTREY: DONKEY BOY AND SCULPTOR.

By HAROLD ARMITAGE. Illustrated. 1s. net.

A wholly delightful readers for pupils of 10 to 12.

## EXERCISES IN FRENCH FREE COMPOSITION FOR UPPER CLASSES.

By R. R. N. BARON, M.A., French Master, Cheltenham Grammar School. 185 Exercises. Sixth Edition. 1s. 6d. net.

## A REFORM FIRST FRENCH BOOK.

Especially written for the use of Adult Students. By J. STUART WALTERS, D. ès L. Illustrated. Second Edition. 1s. net.

## DIRECT METHOD FRENCH TEXTS

Edited by R. R. N. BARON, M.A.

**TRISTAPATTE ET GORET, Etc.** Crown 8vo. 1s. net.  
"The five simple stories contained in this book have been taken from the 'Livres roses Larousse.' Each is divided into short sections, and to each section there is an 'Exercice,' consisting of a set of French questions on the text, questions on grammar and vocabulary, and a subject for free composition."—*School World*.

**PIERRILLE.** By JULES CLARETIE. Crown 8vo. Third Edition. 1s. 6d. net.

A delightful idyll of peasant life, filled with dramatic incident, and true to nature in every detail. Edited for upper forms.

"Well edited, with brief but adequate notes in French."—*The Journal of Education*.

**TAMANGO and JOSE MARIA LE BRIGAND.** By PROSPER MÉRIMÉE. Crown 8vo. Second Edition. 1s. net.  
TAMANGO is also issued separately in limp cloth, at 4d. net.

"A dramatic but fascinating story, well printed, with excellent exercises, notes in French, and a short account of the author."—*The A.M.A.*

**LA BELLE NIVERNAISE.** By ALPHONSE DAUDET. Crown 8vo. Fourth Edition. 1s. 6d. net.

"The editor has done his work well. The exercises are carefully arranged."—*The A.M.A.*

**BUG JARGAL.** By VICTOR HUGO. Crown 8vo. 2s. net.

"This story, written when the author was a schoolboy of sixteen, has been well edited for school use, for which it is very suitable. The Notes and Vocabulary are in French, and are arranged as they occur, not alphabetically. The exercises are particularly good, and include a sufficient amount of word-formation."—*Modern Language Teaching*.

**CARTE DE GRAMMAIRE.** By Miss L. E. THEEDAM, The Godolphin and Latymer School, Hammersmith. 6d. net.

A concise résumé of French accidence, written in French and intended to be used in connexion with Reform French Textbooks and readers, by pupils of Junior and Middle School forms.

## AN INTRODUCTION TO HEAT.

By ARTHUR R. LAWS, B.Sc., and GEORGE W. TODD, B.A., D.Sc., Science Masters at the Royal Grammar School, Newcastle-on-Tyne. With 106 diagrams. 2s. 6d. net.

The main idea underlying it is that boys are gifted with a large amount of curiosity, and that, when they once realize that there is something behind many of the phenomena of everyday life, they are prepared to take a good deal of trouble to satisfy their inquisitive instincts.

## OUTLINES OF APPLIED PHYSICS.

By H. STANLEY, B.Sc., Lecturer in the Merchant Venturers' Technical College, Bristol. With 75 diagrams. 2s. 6d. net.

"In the main a series of examples in theoretical physics, for not only are there numerous numerical exercises at the end of each chapter, but more than four hundred of a miscellaneous character at the end of the book. The book will probably be found quite useful."—*Nature*.

## FIRST SCHOOL BOTANY.

By E. M. GODDARD, B.Sc., Science Mistress, Girls' Secondary School, Colchester. With 207 diagrams. Second Edition. Crown 8vo. 2s. 6d. net.

"An excellent combination of practical exercises and clear explanations, illustrated by good bold outline drawings. The pupil who works conscientiously through the physiological experiments, and laboratory and field observations described in this small volume, will have won something better than examination successes."—*Nature*.

The book covers the syllabus of the Oxford and Cambridge Junior Local Examinations.

## AS YOU LIKE IT.

Ed. by C. R. GILBERT, M.A. With Notes. 1s. net.

## THE MERCHANT OF VENICE.

With revised Text, Questions, Notes, and Appendixes. By G. H. BALL, M.A., and H. G. SMITH, B.A. 1s. net. Text only, 6d. net.

"The chief feature of this edition is the series of appendixes which is admirably contrived. Notes, suggestions for character study, and essay writing thereon, short expositions of all outstanding features of interest, and a set of examination papers, old and new, are provided, and are of invaluable help to the earnest student. The text is in good plain type."—*Times*.

## A NEW SCHOOL ALGEBRA.

By W. J. WALKER, M.A., Head Master of Woodhouse Grove School, Apperley Bridge, Bradford. Second Edition. In two volumes, each 2s. net with or without Answers. Complete in one volume, with or without Answers, 4s. net.

"There are plenty of mental or oral questions and test papers. The type is large, and most left-hand pages begin with a new exercise. The examples are for the most part original and are carefully arranged."—*Mathematical Gazette*.

## PREPARATORY ARITHMETIC.

By F. C. BOON, B.A., Principal Mathematical Master at Dulwich College. Second Edition. With Answers, 1s. 6d. net; without Answers, 1s. net. Answers separately, 6d. net.

A revised and enlarged edition of this well known book. A large number of new examples have been added, and the few misprints in the first edition corrected.

## A FIRST SCHOOL CHEMISTRY.

By F. M. OLDHAM, B.A., Senior Science Master at Dulwich College. With 71 Illustrations. Tenth Edition. 3s. net.

## GRAPHS IN ARITHMETIC, ALGEBRA, AND TRIGONOMETRY.

By W. J. STAINER, B.A., Head Master of the Municipal Secondary School, Brighton. With 120 diagrams. 2s. 6d. net.

## LATIN EXTRACTS FOR SIGHT TRANSLATION.

With Hints to Beginners. By G. H. BALL, M.A., Head Master of King Edward's School, Camp Hill, Birmingham. 1s. net.

## THE NEW PRELIMINARY GEOGRAPHY.

By H. B. WETHERILL, M.A., Head Master of Allahabad High School. Sixth Edition. With Illustrations and 19 diagrams. 2s. net.

MILLS & BOON, LTD., 49 RUPERT STREET, LONDON, W.1.

## ASSOCIATION NEWS.

**University Teachers and Co-operation.**—The position of those teachers in Universities who are not professors or heads of departments calls for the immediate attention of the authorities. For about a year past there has been in existence a Conference of University Lecturers, formed to champion the interests of its members and, in particular, to press their claims for improved salaries and pensions. The accepted theory is that a University lecturer is a mere bird of passage, destined to fly presently into the blessed haven of a professorship. In practice this theory is not valid, since there must always be a body of lecturers more numerous than the body of professors. Young men of proved ability and intellectual power are appointed as lecturers, only to find themselves after a few years in a scholastic backwater, with little or no chance of promotion and, in a modern provincial University at any rate, doomed to a choice between celibacy or genteel poverty. The honour of being on a University staff may count for something, it is true, but the chance of promotion should be greater and the salary more adequate to the teacher's quality and position. As to promotion, there is one provincial University at least which follows the strange policy of refusing, save in the most exceptional cases, to accept one of its own lecturers as a professor, on the ground that its lecturers, if they are really good men and women, should have little difficulty in securing promotion elsewhere.

The position of University lecturers may be illustrated by the fact that in one case a lecturer with nineteen years' service and a Doctor of Science degree receives only £275 a year. In another a holder of a First Class in the Historical Tripos, with thirty-two years' service, receives £150. These are bad cases, but the monetary side is not the one which can be pressed by University lecturers, who are characteristically averse from ranging themselves alongside the vigorous agitator. The salary question is bound up with that of tenure, opportunity for research, and reasonable prospect of promotion. As we have seen, the lecturer is regarded as a person for whom security of tenure is rather undesirable than otherwise, while his prospects of promotion by no means warrant the insecurity. The work of a modern University tends to become increasingly specialized, and many lecturers are virtually heads of departments. The classes are often large and the demands upon the lecturer's time are correspondingly great, so that, instead of finding opportunities for private reading and research, he is obliged to give up his leisure to correcting essays and exercises. Under these circumstances it can hardly be wondered at if the University Lecturers' Conference desires to make itself the nucleus of a strong body, representative of all branches of University teaching. What appears to be desirable, as it is certainly desired by many, is an Association of University Teachers, to include all professors, lecturers, and others who are engaged in teaching in institutions of University rank.

Hitherto the University teacher has held aloof from all professional movements. It would seem that he shrinks from being regarded as a teacher, and perhaps in some cases this diffidence is not without justification. But, apart from individual fitness, the whole progress of higher education in this country demands that there shall be a united body, able and willing to bring expert opinion to bear on questions of University development. The barriers between the Universities should be removed, and in particular the self-created isolation of Oxford and Cambridge should be replaced by a determination to take an active part in helping the country to provide more facilities for advanced study.

An association such as is contemplated should receive full support from all University teachers, and not least from those who hold positions of authority and emolument such as absolve them from any charge of self-seeking. It is folly to suppose that Oxford and Cambridge, excellent as they are, can meet the coming demand for University training.

**The Teachers Registration Council.**—Up to and including Thursday, January 9, the total number of applicants for admission to the Register was 24,537. During the year 1918 the number of applications was 4,570, as compared with 1,648 in 1917. This improved rate of progress may be ascribed in part to the conclusion of hostilities, but it is mainly due to the fact that teachers in all branches are coming to realize the supreme importance of unity among themselves. The branch of teaching work which has been throughout the most tardy in recognizing a community of interest with other teachers is the one represented by University professors and lecturers, comparatively few of whom have taken the trouble to become registered.

The Council has passed a resolution congratulating Mr. Fisher on his work in Parliament, and is now engaged in considering the Statutory Rules of the Superannuation Act, which have been submitted to it for criticism. At the end of 1920 the full Conditions of Registration come into operation, and a schedule of approved examinations is being prepared. Among others, the Higher Certificate of the National Froebel Union has been included, but only for such applicants as are shown to have taken a course of at least three years in preparation for the examination. A course of three years seems to be regarded by the Council as the least which ought to be taken by an intending teacher.

**The College of Preceptors.**—At the November meeting of the Council of the College, Sir Philip Magnus presided, and Mr. G. P. Dymond was welcomed as a new member of the Council. Mr. R. F. Charles was appointed as a representative on the Federal Council of Secondary Schools Associations and the appointment of Canon Swallow was confirmed.

The diploma of Associate was awarded to Joseph G. Walsh and O'Neil M. Renner, who had satisfied the prescribed conditions.

The Council considered the report of the Special Committee on the Future Policy of the College, and resolved to ask the Committee to continue its work, in consultation with other Committees of the College, and after considering certain suggestions, submitted by members, as to ways in which the usefulness of the College might be made known and its work extended.

Prof. John Adams was appointed to deliver a course of twelve lectures on Psychology during the spring term.

**The Association of Public School Science Masters,** hitherto confined to teachers of natural science in the public schools, has now decided to admit to membership science teachers in schools which are governed by corporate bodies. Although one of the avowed aims of the Association is "to afford a means of communication between natural science teachers in public schools themselves and between them and others engaged in teaching natural science elsewhere," this extension of the field of possible recruits is likely to increase the number and strength of the Association in a direct manner.

**The Association of Assistant Mistresses** has been invited, with other bodies, to nominate a representative to act in an advisory capacity in connexion with the Extension Board of the University of London. The representative appointed is Mrs. Jewel-Pearce, a graduate in science of the University and a mistress in the Kensington High School. Mrs. Jewel-Pearce will be invited to attend meetings of the Board for special purposes, when it is desired to consult with her concerning school examinations. A similar invitation has been received from the Joint Committee for Examinations of the University of Cambridge, and Miss M. Gardner, science mistress at Ipswich High School, has been elected as the Association's representative.

## LITERARY SECTION.

## BOOKS AND THE MAN.

**The Alleged Dullness of Educational Writings.**

"Sir, he was the bore of all bores; his subject had no beginning, middle, nor end. It was education!"

These words of Thomas Love Peacock are little known to the average man, but they express with much of truth the profound conviction of his mind in regard to all matters relating to education. Pedagogy, or pedagoguery, as it is sometimes maliciously miscalled, is a theme which fails to attract as a serious topic, although it is often the centre of a whirlpool of disconnected and half-considered opinions, such as are thrown off by busy men in their lighter moments. Even the great Milton introduces his Tractate on Education to his friend Hartlib by saying that it is "a few observations that have flowered off," and adding: "To search what many modern *Januas* and *Didactics*, more than ever I shall read, have projected, my inclination leads me not."

The modern educationist—and still more the modern "educationalist"—is prone to take himself very seriously and to import into his talk about schools and their work a strange jargon which baffles the comprehension of the ordinary man or woman. A useful adjunct to all works which profess to deal with education as a science would be a vocabulary, or glossary, of terms. It would be overbold to aim at providing an absolute and unquestioned definition of every recondite word, but the author might escape condemnation if he prefaced his list of meanings by some such phrase as, "In this work the following terms are used in the sense indicated." This would help the reader to escape the bewilderment which comes from vainly pursuing the inner significance of such words as "concentration," "correlation," "apperception," and the like.

Books on "general method" or on educational organization are often intelligible enough, but still more often are they marred by the depressing platitude. Dealing, as they do, with a restricted field of social effort, they contain vain repetitions and well worn commonplaces, since it is hardly possible to propound new truths without at the same time proposing to grasp "this sorry scheme of things entire and shatter it to bits and then remould it to the heart's desire." Works of this iconoclastic character have been written, but even they are rarely of sparkling vivacity, since the writers are usually consumed with the zeal of their own precepts. The neglected idol-breaker thereupon becomes morose and soured, and instead of attacking the old systems, he begins to attack those who believe in them, with the result that his writings are assigned to the branch of philippics rather than to that of pedagogy, and cease to be educational in any sense at all. They do not necessarily cease to be dull, however, for there is no greater bore than your bilious reformer.

Some books on education are consciously and refreshingly humorous. Many others also, but these unconsciously, and of them it may be said that the full flavour of their absurdity is not to be tasted save by one who has advanced some way towards an understanding of real education. But the peculiarity of education is that the best and most interesting things written about it are to be found in books which are not educational in purpose at all. Let the aspiring teacher study the mental operations of Tom Sawyer, Huckleberry Finn, or the boy Bevis, among others. Let the one who is uplifted in mind read the sad story of Mr. Perrin and Mr. Traill, or ponder over the fame of Orbilius. Lastly, are we not now assured that Mr. Squeers was the first to practise a great part of modern pedagogy, with its demand that schooling shall be linked up with life. "When he has learned that bottinney means a knowledge of plants, he goes and knows 'em."

SILAS BIRCH.

## REVIEWS AND NOTICES.

*The Passman.* By R. L. Archer. (3s. 6d. Black.)

Some thirty years ago there was a sort of boom among preachers in favour of the average man, and many sermons were delivered on the man of two talents. We should be glad to think that this book is the herald of a similar tribute to the passman at our Universities. In schools, the genuine blockhead competes with the quasi-genius for a place in the limelight, but the average boy slips through his course without attracting very much attention. The same is true of the Universities, and the man of broad sympathies cannot but welcome the wholesome light that Prof. Archer here sheds in dark places. The trend of our author's argument may be gathered from his sub-title, "How are our Universities to train citizens?" It must not be supposed, however, that the book is taken up wholly with economics. Its author is far too alive to the value of the humanities to fall into the error that is making such havoc of the lecture system existing at present in the British Army. The military authorities have got the excellent notion into their heads that, since the Army is being demobilized, it is necessary to do something to prepare the men to take up their civil duties again. Lectures on citizenship are accordingly being delivered on a scale that is wholesale. We do not make citizens by lecturing them on nothing but citizenship. Prof. Archer has chosen the wiser way of preparing for students a broad general culture course that forms an admirable background against which they project the limited amount of direct teaching of citizenship that he recommends. It is very encouraging to find a man steeped in the older humanities taking up an attitude that wins friends among practical men without alienating the sympathies of his academic peers. The book can be read and understood by the layman in education. It is true that the author warns his lay readers that Chapter III is rather technical and may be omitted without serious loss. We are not quite sure whether Prof. Archer has not done this thing with malice aforethought, and we shall be greatly surprised if his warning does not have just the opposite effect from that he appears to have in view. In any case the reader, lay or professional, cannot but admire the skill with which the formidable subject of formal training is handled in the very limited space that can be afforded for it. For the purposes of the book the treatment in this chapter is admirable. We cordially congratulate Prof. Archer on a most timely and enlightening book.

*Mathematical Analysis*, Vol. II, Part I. By E. Goursat.

Translated into English by E. R. Hedrick and O. Dunkel. (Boston, &c.: Ginn & Co.)

In the first part of the second volume of his "Cours d'Analyse," Prof. Goursat discusses the theory of functions of a complex variable, and on account of its applicability to certain courses of instruction given in the American colleges, the authors of the present English translation of the original text undertook its preparation. Not only did they obtain the sanction of the French mathematician to make an English rendering, but they had the advantage of submitting the proof-sheets of their work for his approval and of obtaining his consent to the special form of publication which has been adopted as most suitable for class purposes in America.

# IMPORTANT EDUCATIONAL BOOKS

Second large Edition in the Press.

## THE PLAY WAY.

**An Essay in Educational Method.**

By H. CALDWELL COOK, M.A.

Demy 8vo. Illustrated from Photographs. **3s. 6d. net.**

"The book is of the first rank, and we feel that our duty at the moment is to secure that it should be singled out for close study by all who are prepared to revise their methods when fresh light is presented."—*Journal of Education*.

## THE PEOPLE OF ENGLAND.

**A Social History for Schools.**

By STANLEY LEATHES, C.B., M.A.

Vol. I. **THE PEOPLE IN THE MAKING.**  
From the Earliest Times to the Invention of Printing.

Vol. II. **THE PEOPLE IN ADVENTURE.**  
To the French Revolution.

Each volume 320 pp., with over 100 Illustrations. **2s. 6d. net.**

"We hope that Mr. Leathes's work, besides delighting the child with its unflinching fertility of interest, may stimulate the teacher to make such methods his own. . . . The pictorial illustrations are many and well chosen."—*Times*.

## HEINEMANN'S SCIENCE MANUALS.

### INTRODUCTORY ELECTRICITY AND MAGNETISM.

By CARL W. HANSEL, B.Sc.

Over 300 Illustrations and Diagrams. Crown 8vo. **2s. 6d. net.**

A complete first course in electricity and magnetism based upon actual experiment, and embracing the recent changes and recommendations of the Board of Education's new syllabus.

### A FIRST-YEAR COURSE IN GENERAL SCIENCE.

A Combined Text-book and Note-book.

By E. A. GARDINER, M.A., F.C.S.

**2s. 6d. net.**

This book presents an experimental course of general elementary science, and is an attempt to save time for the boy and labour for the teacher. It is divided into three sections:—I, Simple measurements. II, Some Common Apparatus and Instruments. III, Properties of Water and Air.

### EXPERIMENTAL DOMESTIC SCIENCE.

By R. H. JONES, M.Sc., F.C.S.

With over 80 Illustrations and Diagrams. Crown 8vo. **2s. 6d. net.**

This book provides a suggested course for Domestic Science Schools and Girls' Schools generally, based upon the view that Science can be directly and adequately taught in the kitchen. The chief scientific principles in their application to domestic subjects are made clear by drawing upon everyday experience, and by the aid of kitchen utensils and commodities.

### EXPERIMENTAL MENSURATION.

An Elementary Text-book of Inductive Geometry.

By H. S. REDGROVE, B.Sc. (Lond.), F.C.S.

The special feature of this book is the combination instead of the usual separation of Elementary Geometry, Trigonometry, and Mensuration. It is suitable for first and second-year students of Technical Schools.

The Only Authorised Books on the Montessori Method.

## THE MONTESSORI METHOD.

By Dr. MARIA MONTESSORI.

Illustrated. **3s. 6d. net.**

In this book Dr. Montessori gives a clear explanation of her method and the principles upon which it is based.

## DR. MONTESSORI'S OWN HANDBOOK.

**A Manual for Teachers and Parents.**  
**3s. 6d. net.**

As a supplement to her larger book on the Method, Dr. Montessori has produced this explanatory manual, which is invaluable for all teachers.

A New Montessori Book.

## THE ADVANCED MONTESSORI METHOD.

By Dr. MARIA MONTESSORI.

Vol. I. **SPONTANEOUS ACTIVITY IN EDUCATION.** **3s. 6d. net.**

Vol. II. **THE MONTESSORI MATERIAL FOR CHILDREN UP TO ELEVEN YEARS.** **12s. 6d. net.**

"A contribution to scientific pedagogy such as we have not had since the institution of the kindergarten eighty years ago."—*School Guardian*.

## A COMMON-SENSE ALGEBRA.

By ASA BURNISTON, L.C.P. (Hons.).

**1s. 6d. net.** With Answers, **2s. net.**

Suitable for use in the Upper Classes of Elementary Schools, in Evening Schools, and in the Lower Forms of Secondary and Technical Schools. An extremely useful and enlightened introductory algebra.

## ELEMENTARY BUSINESS TRAINING.

By V. H. ALLEMANDY.

Crown 8vo. **1s. 6d. net.**

This book is intended for use in the Upper Classes of Elementary Schools and in Commercial and Evening Classes.

## THE BRITISH ISLES.

By A. B. ARCHER, M.A.

Illustrated. **2s. 6d. net.**

This is the first book in a new series, forming a Secondary School course in Geography, and is suitable for the Lower Middle Forms.

## AVENTURES ET MERVEILLES.

**A Simple French Reader for Junior Forms.**

By C. V. CALVERT, B.A.

Crown 8vo. 300 pp. Illustrated. **2s. 6d. net.**

## FRENCH TRANSLATION AND COMPOSITION.

By H. J. CHAYTOR, M.A., and E. RENAULT, B.A.

Crown 8vo. **2s. net.**

## SCIENCE AND EDUCATION.

Edited, with an Introduction, by Sir RAY LANKESTER.

**1s. 6d. net.**

This volume contains seven lectures which were delivered by Whewell, Faraday, Latham, Daubeny, Tyndall, Paget, and Hodgson before the Royal Institution in 1854.

NOTE.—Mr. Heinemann will be glad to hear from teachers who have manuscripts on educational matters which they desire to publish.

**LONDON: WILLIAM HEINEMANN, 20-21 Bedford St., W.C.2.**

needs of the student which has been afforded to the author by his experience in college teaching, it is fairly safe to predict that the treatise will obtain a permanent place among the standard textbooks on the subject with which it is concerned. Why is it difficult to teach and why is it difficult to learn applied mechanics? To these insistent questions the writer sought to find satisfactory answers, and, having convinced himself that the generality of textbooks in use on the subject were either, on the one hand, too mathematical in character or, on the other, too exclusively given up to the application of insufficiently discussed principles, he set himself the task of producing the present treatise—namely, one which should not make the clear explanation of fundamental laws and principles unduly subordinate to the description of experiments and their application, and which, by a free recourse to graphic methods, should obviate an excess of complicated mathematical calculations. Time will be the final judge of the degree of accuracy which Mr. Andrews has attained in his endeavour to solve the problems that presented themselves, but in any case the students' library of applied science possesses a very valuable addition in this volume. In the production of the text the Cambridge University Press maintains its high standard of excellence. The numerous diagrams also are clearly executed and reproduced. C. M.

*The Three Black Pennies.* By Joseph Hergesheimer.  
(6s. net. Heinemann.)

A story which takes the form of a record of several generations of the same family presents many difficulties of construction and incurs some risk of becoming tedious. In the play called "Milestones," Mr. Arnold Bennett has shown that this form can be used very agreeably in drama, but there the writer is greatly helped by costume and other visual aids, which enable the playgoer to apprehend differences of atmosphere in the different periods. It is a veritable triumph for Mr. Hergesheimer that he should have succeeded without such help in making vivid to a reader the change of environment of three generations of the Penny family, with a central figure in each generation in whom a trace of latent Celtic blood wells up with consequences which are duly related. We are first introduced to the family in its surroundings in an early and primitive ironworks in Pennsylvania. The forge has been a commercial success, and the elder Penny is comfortably well off. His son, Howat, is a "black" or Celtic type, and takes but little interest in the iron trade. We leave him on the point of marrying a newly widowed lady who is visiting his parents.

The second section of the story carries us forward a hundred years, and we make the acquaintance of Jasper Penny, outwardly respectable and certainly very wealthy, but yielding now and then to the temperament of the Black Penny strain. In middle life he meets Susan Brundon, a school-mistress, and seeks to marry her, but is rejected by reason of the dark passages in his earlier life. In the third section we learn, however, that Jasper did finally marry Miss Brundon, and we are introduced to their son, another Howat Penny, a man of leisure and cultivated tastes, who lives on the accumulated wealth of the Penny iron and steel business. Here the real interest shifts to the character and doings of Mariana, a wealthy American girl of the period, who is in some sense his ward, but, whereas he dwells intellectually in the atmosphere of the early eighties, she is somewhat ahead of the twentieth century. Finally, we see the end of the Black Pennies in the death of Howat, the last of his line.

The story thus outlined is finely told, with a rare distinction of style and a shrewd perception of character. Mr. Hergesheimer will take high rank among American writers of fiction and his work deserves attention, not alone by reason of his great talent as a narrative writer, but also because of the background of close thought against which his characters and their doings are depicted. This is a remarkable novel, and it should find many readers. R.

*A College Mystery.* By A. P. Baker. (3s. 6d. net. Heffer.)

In this volume Mr. Baker tells a remarkable story, which ought to attract the attention of the Psychological Research Society. It concerns an apparition which has been seen by credible and responsible persons in the Fellows' Garden at Christ's College, Cambridge. The date of these appearances is May 29, and on this date in 1917 the apparition was seen by an Army captain, while on the same day of 1918 it was seen by another officer quartered in the College. This day in May is the anniversary of the death of one Philip Collier, who was a brilliant Cambridge man and a Fellow of Christ's College in the early forties of the nineteenth century. Among his colleagues was a certain Christopher Round, a good scholar but a dull pedantic person, who was filled with jealousy towards Collier on account of his brilliance and popularity. This feeling rises to a head when Collier wins the affection of Lady Clifford and seems likely, at the same time, to obtain the University Chair of Greek, for which Round thought his claims superior.

The result of this jealousy is told by Round himself in a manuscript which he handed to his pupil Simon Goodridge under a promise that it should not be published for at least fifty years after his death. Goodridge died and left the papers unopened, and Mr. Baker now makes them public. They contain a confession by Round that he murdered Philip Collier in the Fellows' Garden of the College. The crime was never discovered, but Round lived afterwards as a recluse, seldom seen abroad, except that in the evening he walked in the Fellows' Garden, always retracing his steps when he had reached a certain point. Philip Collier died on May 29, and Mr. Baker tells us that at least four men who have lived in rooms overlooking the garden, have seen the figure of a tall, heavy, elderly man, dressed in black, with a swallow-tailed coat and high collar and stock, walking at nightfall on the lawn. The additional evidence is furnished by the two officers already mentioned.

An interesting pendant to the story is that Philip Collier, at the time of his death, was helping Dr. James Young Simpson in his early experiments with chloroform, and we are told that Collier showed symptoms which Round mistook for drunkenness. The record is completed by reprints from newspaper reports of the inquest on Collier, with some amusing comments by the coroner on the wickedness of evading the Divine purpose by seeking anaesthetics.

The most hardened sceptic on psychical matters will find this book full of interest. It contains five drawings of Christ's College by F. H. Round. R.

*A History of Everyday Things in England.* By Marjorie and C. H. B. Quennell. (8s. 6d. net. Batsford.)

The authors of this book have set out with the purpose of making clear to young readers "of public-school age" how life was carried on at the different stages of English history. The present is the first of two volumes, and carries us to the end of the fifteenth century. We may say at once that teachers and parents will find much help in the book, but they must be prepared to take a little trouble if they want their young people to get the full advantage of what the authors provide. Whether deliberately or not, the writers have grouped their work round two distinct "cores"—architecture and dress; a not unnatural distribution of labour when a man and a woman undertake an exposition of this kind. Of the two, the buildings form the more difficult part, and in particular the development of vaulting, with its assumption of a knowledge of some of the troublesome problems of descriptive geometry, will prove a stumbling block to the less seriously minded young readers. Even here, however, the authors have done their best to smooth the path of knowledge, and they have the very important advantage of being able to use the pencil as well as the pen, for the book is not merely written, but is also illustrated by its makers, who thus form the ideal combination for sound exposition. The book is really written round the illustrations, but not after the manner of the hack bookmaker, who is set

(Continued on page 26)

# DENT'S EDUCATIONAL PUBLICATIONS

## Comparative Education. A Study of the Educational Systems of Six Representative Countries.

Edited by PETER SANDIFORD, M.A., Associate Professor of Education in the University of Toronto.  
Demy 8vo, cloth. **8s. 6d.** net.

This important volume contains chapters on : United States, Germany, England, France, Canada, and Denmark.  
*Times*.—"Dr. Sandiford has produced a really useful book."  
*Athenæum*.—"A valuable contribution to contemporary educational literature."

## French Prose : From Calvin to Anatole France

Edited by W. G. RITCHIE, M.A., and JAMES M. MOORE, M.A. Crown 8vo. **4s. 6d.** net.  
Represents French Prose at its best. Suitable for upper forms and University students.

## The New Testament for Schools

Arranged and Edited by Canon MORLEY STEVENSON, M.A., and C. W. BAILEY, M.A.

Crown 8vo. **3s. 6d.** net.

The natural companion to the same Editors' "Old Testament for Schools."

## How to Read the Bible in the 20th Century.

By SOPHIE BRYANT, D.Sc., Litt.D., formerly Head Mistress of the North London Collegiate School.

Crown 8vo. **3s. 6d.** net.

For teachers and pupils in Secondary Schools as well as for the home and the Sunday School of the modern type.

## DENT'S MODERN FRENCH BOOKS

**A Rapid French Course.** By RANDALL WILLIAMS and WALTER RIPMAN. Illustrated. Crown 8vo. **3s.** net. Specially suitable for Evening Students.

**La France.** By G. GUIBILLON. Illustrated. Crown 8vo. Cloth. **3s.** net. A book on French life and ways.

**First Steps in French.** By WALTER RIPMAN. **2s. 6d.**

**Further Steps in French.** By WALTER RIPMAN. **2s. 6d.**

**Dent's First French Book.** By S. ALGE and W. RIPMAN. **2s. 6d.**

**Dent's Second French Book.** By S. ALGE and W. RIPMAN. **2s. 9d.**

**The Best French Prose.** Six Vols. Limp Cloth. Each, **5d.** net.

**The Best French Poetry.** Six Vols. Limp Cloth. Each, **5d.** net.

**Dent's Short French Readers.** With Reform Exercises. For Second, Third, and Fourth Years. Limp Cloth. Prices—**5d., 5d., and 8d.** each.

## DENT'S MODERN ENGLISH BOOKS

**An English Pronouncing Dictionary.** By DANIEL JONES, M.A. Demy 8vo. Cloth. **7s. 6d.** net.  
Based on the system of the International Phonetic Association.

**Story Tellers' Hall.** A Literary Reader for Junior Forms. Edited by Dr. RICHARD WILSON. **2s. 3d.** net.

**Treasure Trove.** A Literary Reader for Middle Forms. By the same Editor. **2s. 3d.** net.

**Coronata.** A Book of Poems. By the same Editor. **2s. 3d.** net.

**Composition through Reading.** By F. PICKLES, M.A. The Direct Method of Teaching English.

INTRODUCTORY BOOK For Junior Forms. **1s. 9d.** net. A Complete Preparatory Course.

BOOK I for Lower Middle Forms. **1s. 9d.** net.

BOOK II for Upper Middle Forms. **2s.** net.

**THE TEMPLE POETRY BOOKS.** A new graduated collection for Preparatory Schools and Lower Forms. In Eight Parts. Limp Cloth. **7d.** net.

This Series has been carefully designed to inculcate some of the higher lessons of the War, and contains many copyright pieces, including verses by Rupert Brooke, E. Wyndham Tennant, Emile Cammaerts, Sir Henry Newbolt, and other well-known writers of the present day. Each book contains 72 pages in large type, with Four Coloured Plates and several Line Illustrations.

## DENT'S MODERN GEOGRAPHY BOOKS

**HISTORICAL AND ECONOMIC GEOGRAPHY.** By HORACE PIGGOTT, M.A., Ph.D., and ROBERT J. FINCH, F.R.G.S. With numerous Maps, Diagrams, and Pictures. Two volumes have already appeared in this series, viz. : **WORLD STUDIES** (a complete general survey) and **NORTH AMERICA**, with special reference to the United States. Other volumes are in preparation.

**J. M. DENT & SONS, LTD.,**  
ALDINE HOUSE, BEDFORD STREET, W.C.2.

down with a bundle of drawings and is called upon to produce suitable letterpress. The drawings here are of the essence of the contract, and form an organic part of the original concept. The five coloured plates and the wealth of black-and-white drawings would in themselves provide an admirable armoury from which the teacher of history could draw upon for material. But the text proves to be of almost equal help, for it contains the result of careful investigation into sources. Typical contemporary records have been laid under contribution, and have been worked up into a very readable descriptive commentary not lacking in humour. The authors not only understand, but sympathize with the people of the times they deal with, and they contrive to enlist the reader's interest on the human as well as on the mechanical side. Ships and mills and castles and sieges ensure the attention of boys, while homes and kitchens and dresses and pageants will charm the girls. To the teacher will be left the attractive work of correlating the various interests, and filling in the necessary connective tissue. For the book has that quality so pleasing to the skilful teacher of providing all the essentials, while leaving room for just that amount of elaboration that satisfies the teacher's lust of explanation without exposing him to the dangers of boring his pupils.

The book is remarkably free from slips. We have noticed only two—a confusion between the left and right of the gaily coloured young man opposite page 106 and the printing of No. 11 for No. 13 on page 200.

*Living Water.* By Harold Begbie. (2s. 6d. net. Headley Bros.)

Dedicated to the Workers' Educational Association, this volume naturally adopts the sociological point of view. Mr. Begbie makes it quite clear that he is not dealing with the kind of education that concerns itself with preparing for examinations, but it is not so clear that he is free from the danger of regarding it as a means of getting on in the world—though, of course, he would not acknowledge that his idea of getting on is the same as that of the people that Ruskin condemns. For *education* Mr. Begbie would like to substitute the term *liberation*—the setting free of the spirit of man. He tells us that "democracy should not only set up a far better State school, but should destroy the middle-class school." He quotes Matthew Arnold in support of this iconoclasm, but one would have expected at least a reference to the very practical ideal represented by the *Einheitschule*. Mr. Begbie deliberately avoids all technicality in his treatment, and one of the main interests in the little volume is the problem of whether he has justified his method of dealing with an abstract problem by means of concrete illustrations. The book proper is made up of a dozen short stories—or, rather, sketches—showing up education against various differing backgrounds. "The short story with a purpose" is here on its trial, and it cannot be justly claimed that it wins its case. Let it be said at once that the present reviewer read all the stories with genuine interest. But he was conscious all the time that his interest was in education rather than in the characters as human beings. A member of the Workers' Educational Association would no doubt read the sketches with sympathetic interest. But such a reader is converted to begin with. It is to be feared that the philistine reader whom Mr. Begbie, and every promoter of sound education, wishes to reach will not be captured by these pages. Some interesting matter is thrown together in an Appendix, but the main interest of the book is in Mr. Begbie's own work, and if he cannot make his subject appeal to the selfishly indifferent reader, he may comfort himself with the reflection that nobody else can.

J. A.

*On the Urgent Need for Reform in our National and Class Education.* By Sir Harry Johnston. (9d. net. Watts.)

This is a lecture delivered at South Place Institute, and will be found useful by anyone preparing to deal with education from the platform.

# THE COLLEGE OF PRECEPTORS

## LECTURES ON EDUCATIONAL PSYCHOLOGY.

By JOHN ADAMS, M.A., B.Sc., LL.D. F.C.P., Professor of Education in the University of London.

The lectures are so arranged as to assist in the preparation for the College examinations for the Associateship, the Licentiate, and the Fellowship. But the course has as its primary object the presentation of the facts of psychology in such a way as to enable teachers to make practical applications to their life work. The purpose is not so much to impart the technicalities of pure psychology as to bring teachers into touch with such psychological principles as are proving themselves of importance in educational processes. To this end the reading of the students will be guided, and problems set for those who care to work them. Opportunity will be given for asking questions on matters relevant to the subjects dealt with in the lectures.

I. (Feb. 6.) *Aim and Methods of Psychology.*—Subject matter of psychology: two views—consciousness and behaviour: teachers' preference for behaviour: nature of consciousness and method of examining it: the ego and the non-ego: introspection: observation: relation between physiology and psychology: brain *versus* mind: classification of the branches of psychology: psychology as an aid to education: dangers of the psychological attitude in school.

II. (Feb. 13.) *The Perceptual Plane.*—The inner and the outer world: communication between them: the gateways of knowledge: sensation and the senses, general and special: pure sensation and the passage toward meaning: nature of perception: the training of the senses: the place of observation in education: common fallacies on the training of observation: the raw material of knowledge: organization of percepts: meaning and application of apperception.

III. (Feb. 20.) *The Conceptual Plane.*—Presentation *versus* representation: passage from perception to conception: the series—*sensory, percept, image, generalised image, concept*: fallacies of abstraction and generalisation: mental content: nature of ideas: ideas as forces: association of ideas: presentative activity: flash of conception: manipulation of the activity of ideas: the static and the dynamic threshold: suggestion and its manipulation in education.

IV. (Feb. 27.) *Memory.*—The basis of personal identity: retention and recall: reverie, reminiscence, and recollection: obliviscence: dated and undated memory: natural or "brute" memory: associative memory: rational memory: the training of the memory: the instalment system of memorising: mnemonics: legitimate and illegitimate: coefficients of memory: permanence of types of memory: learning by rote or by heart: cram in relation to memory.

V. (March 6.) *Imagination.*—Connexion between memory and imagination: cause of the evil repute of imagination among serious people: irrational views of teachers on the range of the imagination: imagining as opposed to imagining: clearly imaged ends: degrees of freedom of the imagination: the artistic and the scientific forms of imagination: training of the imagination: creative aspect: active and passive forms: hypothesis and invention: limitations imagination sometimes imposes upon thinking.

VI. (March 13.) *The Control of Consciousness.*—The stream of consciousness needs direction: source of control: the dominating ego: attention in relation to consciousness: focal, marginal, and sub-marginal areas: internal and external sources of control of consciousness: nisc and anisc attention: mechanism of attention—respiratory, vascular, and motor elements: the rhythm of attention: concentration and diffusion beats: the driving power of interest.

VII. (March 20.) *Instinct and Habit.*—Among conflicting views of the nature of instinct, Macdougall's is the most useful for teachers: place of instinct

in education: relation to habit: the elimination of consciousness in the development of habit: degrees of automatism in habits: relation between the upper and the lower brain: the growing point: co-ordination and accommodation: advantages and dangers of forming habits: the changing and the breaking of habits.

VIII. (May 8.) *The Unconscious and its Implications.*—Gradual recognition of the dynamic nature of the unconscious: the Titan within us: nature of the unconscious: general belief that we guide ourselves entirely by intellect: Bergson's view of the relation between intuition and intellect: conflict between the conscious and the unconscious: repressed complexes and their interference with normal life: psycho-analysis and its possible applications to educational problems.

IX. (May 15.) *Personality and Temperament.*—Individuality, personality, and character: modern demand for free development of personality: personality develops round the temperament as a nucleus: the "humours" classification: the newer classification into sensories and motors: introverts and extroverts: relation of temperament to age: modifiability of temperament: relation between teacher personality and pupil personality: teacher's sanction to manipulate temperament and personality.

X. (May 22.) *The Affective Aspect.*—Feeling is getting a much greater amount of attention from psychologists than formerly: nature of emotion: its bad reputation among philosophers: doctrine of elimination: relation of emotion to passion and sentiment: the mechanism of the emotions: the Lange-James and other theories: dangers of "transferred" emotions: relation between the emotions and the instincts: teacher's manipulation of the emotions: how far can and ought the emotions to be trained?

XI. (May 29.) *The Conative Aspect.*—Nature of will: misconceptions underlying such phrases as a "strong will", a "weak will", "breaking the will": the demonic view of the will: will as a resultant: nature and function of motives: dangers of hypostatization: possibility of training the will: temptations of the strong-willed teacher: the trouble of the undecided pupil: confusion between caprice and freedom: like other powers, the will must be trained by exercise.

XII. (June 5.) *Experimental Psychology.*—At first a branch of philosophy, psychology now claims scientific standing: accordingly experimental methods are being adopted: fundamental assumption underlying this experimental method: place of "brass instruments" with free experiments *versus* laboratory experiments: experience compared with experiment: statistical methods: correlation and other formulae: attempt to eliminate the subjective element: special experimental problems in education.

FEES: Half-a-guinea for the whole Course; Two shillings for a single Lecture. Members of the College have free admission.

# THE TECHNICAL COLLEGE,

LOUGHBOROUGH, LEICESTERSHIRE.

H. SCHOFIELD, M.B.E., B.Sc. (Hons.) Lond., A.R.C.Sc. Lond., Assoc.M.Inst.C.E., PRINCIPAL.

## DEPARTMENTS OF MECHANICAL AND ELECTRICAL ENGINEERING.

Complete Courses of Training are arranged in both Theory and Practice of Mechanical Engineering,

The Workshops of the College provide accommodation for 500 students working at the same time.

The equipment is on most modern and comprehensive lines, and comprises plant for turning, fitting, milling, grinding, automatic lathe operating and tool setting, tool and gauge making, foundry work, pattern making, drawing office work, heat treatment, viewing and testing of all kinds.

None but first-class work of a productive character is undertaken by the students, working under the skilled supervision of a fully qualified technical staff.

The complete course covers a period of five years, during which works training in all the above sections will be given, and this will be accompanied by a full theoretical course of instruction in the College Lecture Rooms and Laboratories.

Intending students should be at least sixteen years of age, and have had a good Public School or Secondary Education.

The fee is £5 5s. per term, and the next term will commence on January 14, 1919.

Boarding accommodation is provided in Hostels attached to the College, full particulars of which, together with illustrated Prospectus, will be forwarded upon application to the Principal.

W. A. BROCKINGTON,  
Director of Education.

## “AN IDEAL HISTORY BOOK.”

Each chapter treats of such subjects as General Social Conditions, Costumes, Buildings, Modes of Life, Food, Travel, Fairs and Markets, Games, and Industrial Occupations.

## A HISTORY OF EVERYDAY THINGS IN ENGLAND

Done in Two Parts, of which this is the first (1066-1499).

Written and Illustrated by

**MARJORIE and C. H. B. QUENNEL.**

Containing 200 pages, including 86 Illustrations specially drawn by the Authors and reproduced in line and half-tone, also 5 Colour Plates showing the development of Costume.

Price 8/6 net. Postage 6d. extra.

THE TIMES, dated September 26th, 1918, in a 130-line review, says:

“The goal of the authors of this very charming book is to introduce boys and girls to the life of successive ages, and so to enable them to study history, and indeed special branches of history, in such a way that the evolution of national life should appear a living thing. This we think they have achieved, and it is no mean achievement.”

THE SPECTATOR, dated November 9th, 1918, in a 100-line review, says:

“A really delightful book for big children . . . interesting and charming from cover to cover.”

THE MORNING POST, dated December 27th, 1918, in a 50-line review, says:

“The heart of John Richard Green . . . would have rejoiced at this history of everyday things and people in England which, though intended for boys and girls of public school age, ought to be read and studied by the parents of each one of them.”

The 1st edition of this remarkable book is nearly exhausted. A second large edition is in the press.

An illustrated prospectus will be sent post free on application.

**BOOKS  
FOR  
TEACHERS****ART  
&  
HANDWORK**

**HANDWORK AND GEOGRAPHY.** By G. PICKERING, F.G.S., *Head Master of the Gurney Pease Memorial School, Darlington*; and J. B. ROBINSON, F.R.G.S., *Principal of the Great Yarmouth Summer School*. With a Foreword by J. A. GREEN, M.A., *Professor of Education in the University of Sheffield*.

Most of this book is a handy guide, with numerous useful exercises to all the outdoor work which lies on the borderland between Mathematics and Geography, and forms an elementary introduction to Surveying and Geodesy. The second part is on similar practical and useful lines, and will be especially useful to those who wish to teach their pupils a little Astronomy. The models suggested are simple and eminently useful.

Part I, demy 8vo, 102 pp., 83 illustrations, 2/6 net.

Part II, demy 8vo, 140 pp., 112 illustrations, 3/- net.

**HANDWORK AND PRACTICAL ARITHMETIC.** By GEO. F. JOHNSON, *Editor of "Educational Handwork," Inspector of Handwork, Liverpool Education Committee*. With an Introduction by J. A. GREEN, M.A., *Professor of Education in the University of Sheffield*.

The work is divided into seven parts, the whole forming a continuous treatise on the fundamental principles of Arithmetic, Geometry, and Mensuration. The first four parts are contained in the first volume, and the last three parts in the second volume.

Demy 8vo, illustrated; vol. I, 128 pp., 3/- net. Vol. II, 106 pp., 2/6 net.

**SIMPLE LESSONS IN COLOUR. I.—COMMON OBJECTS.** By HERBERT A. RANKIN, *Art Master, Silver and Bronze Medallist*.

A Practical Manual suitable for all who would master the elementary principles of colour as applied both to animate and inanimate objects.

Demy 8vo, cloth, 160 pp., 36 full-page coloured plates, 5/- net.

**SIMPLE LESSONS IN COLOUR. II.—FLOWERS.** By the same Author.

In demy 8vo, cloth gilt, 184 pp., with 40 full-page coloured plates. Price 5/- net.

**PENCIL DRAWING.** By the same Author.

This Manual is addressed especially to teachers learning the art of teaching drawing, and should prove of great assistance in removing practical difficulties, and also give considerable insight into the principles underlying the rules and conventions of the subject.

In demy 8vo, cloth gilt, 153 illustrations, 220 pp. Price 5/- net.

**PASTEL WORK.** By the same Author.

The plates chosen to illustrate the scheme in this manual are of such articles as can easily be obtained at any time of the year.

In demy 8vo, cloth, 160 pp., with 32 full-page colour plates. Price 5/- net.

**PASTEL WORK (FLOWERS).** By the same Author.

The developments necessary in the application of colour to plant life are fully described. A seasonal course of nature work with crayons has been fully provided for.

In demy 8vo, cloth, 188 pp., with 36 beautiful full-page coloured plates. 5/- net.

**THE TEACHING OF COLOUR.** By the same Author.

The primary aim of the present volume is to present colour problems, especially in the observational exercises, in as simple a manner as possible.

In demy 8vo, cloth gilt, 178 pp., with 55 beautiful plates in colour and black and white. 5/- net.

**BOOK-BINDING AS A HANDWORK SUBJECT.** By J. HALLIDAY, *Handwork Master, County Technical Secondary School, Workington*; *Lecturer in Handwork, Cumberland County Council*; *Member of the Staff, Brighton Summer School, &c.* With a Foreword by Canon H. D. RAWNSLEY, *Hon Secretary of the Secondary Schools Association, &c.*

Demy 8vo, cloth, 74 pp., with 58 illustrations and diagrams. Price 2/- net.

**WOOD, WIRE AND CARDBOARD.** By J. G. ADAMS and C. A. RLLIOTT. With a Foreword by R. HUDSON, M.A., *Principal of St. Mark's Training College, Chelsea, S.W.*

Demy 8vo, cloth, 116 pp., with 62 black and white illustrations, 2/6 net.

# SUPPLEMENT to THE EDUCATIONAL TIMES

## A REVIEW OF IDEAS AND METHODS.

Founded 1847.

New Series. Vol. 1. No. 1.  
Old Series. Vol. 71. No. 669.

JANUARY, 1919.

### THE JANUARY CONFERENCES, 1919.

#### Introductory.

It is some years since the attempt was first made to bring together the many educational bodies which hold their annual meetings in London during the first week of the year. Unfortunately the project has never been completely successful, for some of the associations have never joined the rest, while others came in for a time but have now broken away again. Yet there are manifest advantages in the plan of having the associations meeting in the same building or neighbourhood, for although they conduct their business deliberations in private, the members gain much from attending joint gatherings and from meeting teachers in other branches and from other types of school.

At the Conference this year a cheerful note was evident throughout. The war was over, the Education Act and the Pensions Act were safely passed, and everybody was able to look to the future with good courage, except possibly the owners of private schools, who are consigned to a frigid region where the official eye never sees them, and the official mind pretends that they have no existence. It may be that these teachers are not greatly perturbed, since they doubtless remember that other institutions have been threatened, and some, such as the monasteries, even suppressed, only to revive, thus illustrating the fact that the English people will not easily be kept in leading strings.

The discussions covered a very wide field, and the speeches, as was perhaps inevitable, included many familiar and well worked topics. A larger element of practical counsel based on first-hand experience would have been very welcome. We ought never to forget that, when we have determined broadly the purpose of our educational system, it has still to be carried out by teachers in classrooms, confronted by children who are embarrassingly individual in their outlook and furnish us with every opportunity for the exercise of good craftsmanship in teaching.

#### Mr. Fisher's Address.

THE inaugural address delivered by the President of the Board of Education was entirely admirable. A pleasant vein of good humour, with many excellently turned phrases and a liberal measure of sound philosophy, went to the making of a thoroughly enjoyable discourse. Mr. Fisher is a disciple of Montaigne in his belief that for mankind the truest wisdom is cheerfulness. His chairman, Mr. Birrell, was a kindred spirit who made a characteristic contribution to the afternoon's gaiety when he protested against Mr. Fisher's picture of the decrepit scholar and invited him to describe the stockbroker or politician.

The main address, on "The Art of Keeping Alive," reminded us that length of years is not in itself admirable, that vigour and alertness are better than sustained existence, and that the teacher, of all people, should be most alive by reason of his calling. The ever-renewed contact with youth should help to sustain the vigour of the teacher, and should serve also to remind him of the fact that kindly sympathy and continued interest in youthful affairs furnish the elixir of life. We were warned, however, against losing touch with the affairs of our contemporaries, against becoming isolated from affairs of moment and too much immersed in the daily round of school and oblivious of great events in the world outside. A piece of practical counsel was conveyed in the reminder of the distinction between animate and inanimate knowledge, and the suggestion that the real teacher took the dead information of the textbooks and made it live for his pupils.

Finally, it was suggested that a wide diversity of private reading and a wise use of holidays were excellent means by which teachers could keep alive in the true sense. On holidays, Mr. Fisher submitted fourteen points for consideration. These will be found, duly annotated, on another page.

## SOME OF THE MEETINGS.

### The Head Masters' Conference.

The annual meeting opened at the Guildhall, London, on January 1. Dr. David, of Rugby, presided. Mr. Fletcher (Charterhouse) spoke on the proposed reform of examinations at Oxford, recommending that Responsions and the school certificate tests should be brought to a common level and that science should be taught to all pupils under sixteen, but not as an alternative to mathematics. Dr. David criticized the proposed examination for Pass Moderations, with its insistence on Latin or Greek. He desired that the examination should be arranged in three parts—viz. languages, ancient and modern; mathematics and science; English literature, modern history, political economics, and industrial economics. From each division at least one subject should be taken. The Conference asked for the immediate abolition of compulsory Greek, approved the proposal that a pass in any of the first public examinations should admit to the second, and suggested that holders of higher certificates in appropriate subjects be exempt from the first public examination. It will be noted that these proposals refer to Oxford and Cambridge. Already it is announced that on January 17 compulsory Greek was abolished at Cambridge. The Conference was told that the schools ought to adopt a simpler standard of life and prepare to receive new classes of the community.

### Incorporated Association of Head Masters.

This body met at the Guildhall on January 2 and 3. Mr. F. B. Malin, of Haileybury, succeeded Mr. W. G. Rushbrooke, of St. Olave's, as President, and delivered an address in which he foretold that the new age would be one for young men who had not taken a set mould, nor conceived of their duty in terms of book learning, but had become imbued with love of labour, of knowledge, and of their fellow-men. Resolutions were passed urging that soldier teachers and students should be released as promptly as possible, that compulsory Greek should be abolished, that greater freedom should be allowed in the choice of subjects for advanced courses, and that the Board's second recognized examination should be linked up with University and other external tests. The Association also recorded its opinion that the minimum salary for the head master of a secondary school should be £600, that capitation fees and boarding-house profits were not suitable forms of remuneration, and that qualified physical training teachers should be provided without delay. Mr. Spurley Hey gave an address on the training of adolescents, which revealed some want of sympathy with the idea of equality of opportunity for all young people. The Association also held a joint meeting with the Head Masters' Conference, an event so unique in character and importance that a full report of the resolutions is given on another page of the Supplement.

### Association of Head Mistresses.

This body held a meeting at University College, London, addressed by Mr. G. K. Devadhar, of the Servants of India Society, who spoke of the education of women in India and said that in 1916 only 5.2 per cent. men and 1 per cent. women were receiving education. He urged that a bold and liberal policy on the part of the Government was necessary to meet the growing demand for education. Mrs. Fawcett said that British women might use their new political power and help their Indian sisters; and Miss Ashworth, late Inspector of Girls' Schools in Bombay, said that education in India should be compulsory and free.

### Assistant Masters' Association.

The annual meeting of the Incorporated Association of Assistant Masters in Secondary Schools was held in the London Day Training College, under the chairmanship of Mr. S. B. Lucas, Whitechapel Foundation School, on January 1, 2, and 3. The Association numbers over 5,200 members. Lord Gainford, formerly Mr. J. A. Pease, an ex-President of the Board of Education, delivered an address in which he said, among other things, that education ought to uplift humanity. The Association passed resolutions in favour of a national minimum scale of salaries, in support of a simplified scheme of examinations, and of co-ordination between the subjects of the advanced course and those prescribed for entrance to Universities. The retiring Chairman, Mr. Birks, made a pungent attack on some features of the Education and Pensions Acts. He complained that both gave too little regard to the teaching, the former by omitting to give them a right to a voice in educational administration, the latter by its meagre provision for existing teachers. He spoke strongly in favour of Provincial Councils and *ad hoc* authorities and demanded greater security of tenure for secondary school teachers.

### Assistant Mistresses' Association.

A meeting of the Association was held at University College, London, on Tuesday, January 8. Miss Laurie, Cheltenham Ladies' College, presided, and in her address laid stress on the need for a sense of vocation among teachers. She said that many gave up the work. In 1913, 71 per cent. of the women teachers were under thirty-five, 6.7 per cent. over forty-five, and only 2.5 per cent. over fifty. She also advocated a study of educational principles, a better correlation of subjects, a fuller application of the truths of psychology, and the freer passage from one type of school to another, including those in our overseas dominions. In a paper on religious teaching, Miss J. E. Wills said that in some schools it did not exist, and in many it was inefficient. She made large demands on those who would teach the subject, asking that they should have some knowledge of Greek, Hebrew, Church History, and Comparative Religion. Miss Margaret Bondfield, Organizing Secretary of the National Federation of Women Workers, told the Association that the working man was better educated in a certain sense than members of other classes. She said that he desired full opportunity for his talented child. Teachers knew too little of the conditions of industry and of the

life for which they were preparing their pupils. She added that the educated classes had diffused dishonest literature in the election, and demanded that teachers should explain such terms as "Pacifist," "Socialist," "Bolshevist," and that Socialist economics should be taught, with other theories, in the schools. It is evident that Miss Bondfield knows no more of the working conditions of school life than teachers know of factory life.

#### **The Training College Association.**

Miss Winifred Mercier, Principal of Whitelands College, delivered her Presidential address to the Association on Friday, January 3. She pointed out that every Franchise Act had been followed by educational development, and that democracy and education were interdependent. On the changes in the training colleges, she said that the Government certificate tended to stereotype the teachers, and suggested that the colleges might become affiliated to Universities and provide a higher type of education, even for those students who did not take a degree course. They should also be places of training for social service. Mr. George Lansbury addressed the Association on "The Task of Teachers," warning them against getting into grooves, and pleading for more human relations between teacher and pupil. Schools were not counting-houses. He thought prize-giving and examinations were bad, as giving children a wrong idea of education. He would have controversial subjects taught frankly from the teacher's own point of view, but he did not want dogma on things about which there were clear differences of opinion. He desired a less rigid uniformity of curriculum.

#### **Association of Science Teachers.**

Prof. F. W. Oliver, in an address to this Association on Monday, January 6, urged that the Universities should not teach the elements of science, but should leave these to the schools, where, under the new conditions, they might be properly taught. Overlapping would thus be avoided. The expense of science teaching had hindered progress, and he suggested the formation of a Consultative Committee to prevent duplication of teaching and apparatus. This suggestion was adopted. Several speakers urged the importance of treating science as a part of the education of all children, for the purpose of showing the relation between school and everyday life.

#### **Catholic Teachers' Federation.**

The ninth annual Conference was held at Birmingham on Friday, January 3, Mr. W. Merrick, of Salford, being the President for the year. Speaking of the application of the Whitley scheme to education, he said that a Teachers' National Council would exercise a profound influence on educational development. As Catholics they welcomed the prospect of a more sympathetic consideration for their just claims, and he urged the need for greater provision of Catholic secondary schools and the removal of restrictions on grant-earning in such schools. At present Catholics suffered because the supply of Catholic schools was inadequate, and the Bishops issued an injunction every year forbidding them to send their children to municipal secondary or technical schools.

#### **The Teachers' Guild.**

On Thursday, January 2, Colonel Lord Gorell, Deputy-Director of Staff Duties (Education), described the new scheme for the education of men on military service. He said that the public did not understand the importance and magnitude of this work. They had three million students, now gradually being brought under a comprehensive scheme of study, with due co-ordination between the Armies. The aim was to help men to realize themselves more fully and to take up later those employments for which they were best fitted. Short courses to train teachers had been instituted at Oxford and Cambridge. Army educational certificates of three grades had been instituted, with others, which most of the Universities were willing to accept as a matriculation test. The great majority of the men desired training in technical subjects, and this was being supplied. Prof. F. J. C. Hearnshaw also addressed the Guild, taking as his subject "National and International Ideals in the Teaching of History." He said that our present ideal is a communal one, as distinct from the military type of Sparta, the political one of Athens, the administrative one of Rome, or the theological one of the Middle Ages. We sought the man of trained mind or the skilled craftsman. Discipline and a sense of duty were requisite, and here history helped. Beginning with stories which appealed to the imagination, they went on to show the relation between cause and effect and to teach political method in relation to precedents. History had been too national. All political propaganda was an abuse, since truth alone should be sought. Miss A. E. Levett, Vice-President, St. Hilda's Hall, Oxford, urged that the word "international" should stand for increased understanding and sympathy. Teachers ought to study medieval history more fully and devote more time to questions of philosophy and less to theological history. Our own economic history ought to be studied in the spirit of Thorold Rogers.

#### **Schools Personal Service Association.**

On Friday, January 3, the Association was addressed by Miss Barker, who spoke on "The Welfare, Education, and Recreation of Young Children." Her experience in welfare work had convinced her that women should be trained for wifehood and motherhood no less thoroughly than men were trained for industry. Adolescent boys and girls should be brought up together under wise guidance, and clubs where they might meet amid good surroundings should be provided. The Rev. J. W. Bottomley spoke of the importance of the adolescent period, and advocated the establishment of recreation centres for young people. He appealed to teachers to give their help in conducting them. He described an interesting scheme carried out in a shipyard on the Tyne where such a centre was provided, to the great benefit of boys, who would otherwise have drifted along as unskilled workers with no intellectual interests.

### Joint Conferences.

Several joint meetings were held in connexion with the General Conference. Thus, on Saturday, January 4, Mrs. Adams read a paper written by Prof. John Adams on "The Utility Motive in Education." He distinguished between studies which were instrumental and those which were ancillary to others. Opposition between these groups was not absolute, since the one might include part of the other. Thus, the medical student studied botany in order to pass an examination, but the girl in a secondary school might study it as part of her general education. The teacher of useful subjects could always claim that these had also a value on the cultural side, although it would be overbold to suggest that a knowledge of book-keeping (even of double entry) was as valuable for culture as a sympathetic acquaintance with the literature of Greece. Pure knowledge often owed its opportunities to the incentive afforded by practical application. Thus physiology, studied from pure scientific interest, progressed slowly, but when its possible applications to medicine were understood the study developed rapidly. Man should be trained to hold his own in both spheres, utilitarian and cultural. Knowledge that refined a man's character was as useful as knowledge that increased his productive power in a material sense. The business of the educator was to hold a true balance between the two kinds of knowledge. The term "utilitarian" should be dropped and the less mischievous phrase "utility motive" substituted.

### Joint Meeting on Continuation Schools.

The Conference closed on Saturday, January 11, with a discussion on Continuation Schools. The first speaker was Mr. Beresford Ingram, District Inspector, L.C.C., who said that experience of the working of ten centres already established in London had led him to revise his previous opinions. He held that boys and girls should not be taught in the same building. The teachers should be old rather than very young, should be trained for the work, and be properly paid. It was easy to spend too much on buildings and too little on staff. The young people for whom the schools were intended would require to be considered, for many of them did not desire further schooling.

Major Gray said it was desirable to prepare now for the time when attendance at continuation schools would be compulsory, not only up to sixteen but from sixteen to eighteen. He believed that parents would come to appreciate the advantages of continued schooling for their children. Where the present age of exemption was highest the desire to continue was greatest. But the new schools must give continued, and not mere repetition education. There must be special buildings and equipment. He hoped that there would be no attempt to prescribe a rigid curriculum. Vocational training of the narrow kind would, in the case of a boy in the boot trade, mean that he would learn about one-eightieth of the process of making a boot. For such a boy the best vocational preparation would give a knowledge of machinery. He deprecated the use of volunteer teachers, even specialists, if they had no practical knowledge of the art of teaching, and suggested that the Local Authorities might set up schemes of training.

### Head Masters' Joint Session.

A joint session of the Head Masters' Conference and the Head Masters' Association was held on January 2 to consider the reports of the Departmental Committees on Science and Modern Languages. These reports had been considered by the Educational Policy Committee, who recommended:—

(1) "That suitable instruction in natural science should be included in the curriculum of preparatory schools, of the upper standards of elementary schools, and of all boys in public and other secondary schools up to the age of about sixteen.

(2) "That mathematics and natural science should be necessary subjects in the entrance-scholarship examinations of public schools, in the first school examination, and in the examinations for entrance into the Navy and the Army, provided that good work in other subjects should compensate for comparative weakness in mathematics and natural science.

(3) "That for boys between twelve and sixteen the teaching of natural science should not be confined to physics and chemistry, but should include some study of plant and animal life, and that more attention should be directed to those aspects of science which bear directly upon the objects and experience of everyday life.

(4) "That there should be as close correlation as possible between the teaching of mathematics and of science."

These recommendations were discussed and adopted by the joint session.

On the report on Modern Languages, the session agreed that the basis of the teaching of any foreign language must be instruction in the elements of English grammar, such instruction being given to all pupils before they entered secondary schools. Resolutions were also passed declaring that the study of one or more languages other than English should be regarded as an essential part of higher education; that the first language other than English should be begun at about the age of ten, the second language not beginning until there was evidence of satisfactory progress in the first; and that usually the first language should be French and the second Latin. Further resolutions were agreed to affirming that both at school and at Universities the advanced study of a modern language should include the study of the literature, history, and characteristics of the people who speak it; and that the study of an additional modern language at a later stage for reading purposes only should be encouraged.

The Committee reported that they could not agree that an Arts degree should be obtainable by a candidate who has never studied either Greek or Latin, but the session passed a resolution to that effect, on the motion of Sir John McClure (Mill Hill).

The session agreed, on the recommendation of the Committee, to the following motions:—

"That this meeting, regarding it as essential in the highest interests of education that the Universities should continue to be self-governing, welcomes the prospect of the establishment from public funds of additional professorships and lectureships, but disapproves of the appointment of University teachers by an external Advisory Committee."

"That increased State aid is urgently needed for (a) the education and maintenance of scholars, (b) the training and remuneration of teachers, (c) the endowment of research, (d) the better equipment of schools and Universities."

On the motion of the President it was agreed that, in view of recently increased State aid to grant-earning schools, it is desirable in the interests of secondary education that the conditions under which such aid was offered should be reconsidered; and a joint committee of the Head Masters' Conference and the Incorporated Association of Head Masters was appointed to consult the schools, to confer with the Board of Education, and to report to a special joint session of the two bodies.

## SOME CONFERENCE SAYINGS.

"In a public system of education the teacher is as much an object of public interest as the taught, not at one time only, but at every stage through his teaching life."—*The President of the Board of Education.*

"We teachers are average people. In this we resemble the majority of mankind, for it has been well said that 'humanity, in the species as in the individual, tends to bulge in the middle.'"—*Sir John D. McClure.*

"Knowledge which refines a man's character is as useful as knowledge which increases his productive power in the material sense."—*Prof. John Adams.*

"Culture consists more in what a man can feel and do than in what he knows."—*Dr. P. B. Ballard.*

"There are many people one would much rather die for than live with."—*Sir John D. McClure.*

"The finest way in which children can learn science is that in which they do both the thinking and manipulation for themselves."—*Dr. T. P. Nunn.*

"Labour's faith in college-trained people has been most severely shaken, though their faith in education is deeper than ever."—*Miss Margaret Bondfield.*

"I am often appalled by the absence of the fighting instinct in human beings: by the imbecile resignation with which they set down great problems as insoluble."—*Miss Maude Royden.*

"It is a matter of ordinary experience that knowledge which is animate at one time can become dead knowledge, or inanimate, after it has served its special purpose."—*The President of the Board of Education.*

"A good teacher in a barn will always beat a bad teacher in the most palatial school ever built."—*Mr. F. B. Malim.*

"In the midst of the heaviest fighting last April a Scottish division suddenly started a lecture course which included Psychology, Art, and Scottish Wit and Humour."—*Colonel Lord Gorell.*

"My complaint is not that boys are taught the 'humanities,' but that they are not taught them. We potter about the porch and never look into the temple."—*Sir Ronald Ross.*

"A valuable acquisition for a statesman is a selectively imperfect memory."—*Sir John D. McClure.*

"As one who has faith in Provincial Councils, and who still believes in larger administrative areas for certain purposes, I hope that the co-operation and combination of Education Authorities may become a very real thing."—*Mr. W. A. Brockington.*

## THE PRESIDENT'S FOURTEEN POINTS ON HOLIDAYS.

(ANNOTATED.)

1. Plan your holiday carefully, but be ready to abandon your plan on the slightest provocation.  
[Never buy a railway ticket in advance.]
2. Never go North when you can go South.  
[But if you are at Windermere, don't go to Wigan.]
3. A change of work is itself a holiday.  
[So is work—for a change.]
4. Never drive when you can walk and never walk when you can ride.  
[But *Ride si sapis* does not mean "Ride if you are wise."]
5. In a cross-country walk there is seldom time for short cuts.  
[Young lovers think otherwise.]
6. A good holiday is like eternity; there is no reckoning of time.  
[This explains the vagaries of the boarding-house clock.]
7. One of the best fruits of a holiday is a new friendship.  
[But beware of *amica usque ad aras*—the friend to the very altar.]
8. Stay where you are happy.  
[If you are under twenty-five you will fancy yourself happier somewhere else. Go there.]
9. Soak yourself in the atmosphere of a new place before you study the details.  
[If, however, the place is Sheffield, the details will have no interest for you.]
10. The best holiday is that which contains the largest amount of new experience.  
["Unless," as Shakespeare says, "experience be a jewel that I have purchased at an infinite rate."]
11. Holidays come up for judgment before the next term's work.  
[Whereas for your pupils the term's work comes up for judgment before the next holidays.]
12. In the choice of holiday books, act on the principle that one of the main uses of leisure is to feed the imagination.  
[An important field of imaginative writing—examination papers—is best excluded.]
13. The principal experts in the act of taking holidays are painters, naturalists, travellers, and historians; the worst person to consult is a golfer.  
[The best of all is yourself, since it is your holiday.]
14. On occasions a very good holiday can be taken at home if you change the hour of breakfast.  
[*Venter praecepta non audit.*]

## THE ANNUAL MEETING OF THE MATHEMATICAL ASSOCIATION.

### REPORT.

THE members of the above Society assembled at the London Day Training College, Southampton Row. Prof. T. P. Nunn, M.A., D.Sc., the outgoing President of the Association, occupied the chair.

The opening session was held on Wednesday evening, January 1, when, following the precedent afforded by last year's annual meeting, Dr. S. Brodetsky gave an interesting and very instructive paper of a comparatively advanced type, selecting as his subject "The Graphical Treatment of Differential Equations." In dealing with this branch of mathematical science, those engaged in prosecuting it, whether mathematicians devoting themselves to research or professors teaching their classes or students in general, have all been accustomed to employ principally, if not exclusively, analytical processes. Many, however, who listened to the address of which we write are likely in the future to avail themselves of the valuable aid of the graphical method in the solution of large classes of problems. As shown on the blackboard, the growth of complete curves under the skilfully guided crayon of the lecturer, who developed them by his chosen method from the known geometrical properties indicated by their own and allied differential equations, was an inspiration. Their portions, as they revealed themselves, clustered around what may well be regarded as a species of axial curve. Node and cusp loci and singular solutions took their proper places in a natural manner. Positive and negative solutions of the equations considered supplied complementary sections of a harmonious whole. The result was an illuminating and attractive demonstration; and one of the advantages claimed for the method of procedure is that by its means many differential equations of types analytically *insoluble* or soluble in theory only, yield to the suggested form of investigation.

On the following day both morning and afternoon sessions were held. At the former, the routine business placed on the agenda sheet occupied in the first place the attention of those present. The draft Report of the Council was brought to the notice of members by the President, and copies were circulated amongst those attending the meeting.

Mr. Hill presented to the meeting the Treasurer's interim report, which, together with other reports, was formally adopted. The valuable work already accomplished, and further work contemplated in connexion with a library for teachers, claimed some attention. Prof. E. T. Whittaker, M.A., D.Sc., F.R.S., becomes the new President of the Association, in succession to Dr. Nunn, whose services during the past two years were gratefully acknowledged. Dr. S. Brodetsky and Mr. Eric Neville were chosen unopposed to fill the vacancies on the Council caused by the retirement by rotation of Mr. F. C. Boon and Captain W. M. Roberts, these members not being eligible for re-election. Members of the Association were unanimous in accepting the suggestion that no elections in connexion with the Teaching Committees should take place this year.

The business routine having been concluded, the meeting passed on to the consideration of the papers

and discussions arranged for the day. Of these papers, Dr. W. P. Milne contributed the first on "The work of the Mathematical Association in assisting the application of Mathematics to Industry." "Conditions," said Dr. Milne, "have all altered. Perhaps wholly, perhaps partially as a result of the war, the need of being able to supply in every direction skilled, in contradistinction to unskilled, labour constantly confronts those engaged in industrial enterprises. The value of a knowledge of mathematical principles, whether in dealing with agricultural or with commercial or with engineering problems, is growing almost from day to day, and it is becoming increasingly important that organized instruction should be forthcoming. Much is already done locally, but the time has arrived when bodies such as the Mathematical Association should combine with the academic side of their work a practical side also. In its inception the Association was one for the 'Improvement of Geometrical Teaching,' and was instrumental in introducing the teaching of geometry by modern methods and in bringing about the substitution of other textbooks for the 'Elements of Euclid.'" Dr. Milne advocates the incorporation of a large amount of work of applied character with that hitherto undertaken by the Mathematical Association. In furtherance of this view, he, in combination with Dr. Nunn, is making an effort to bring about the formation of Special Committees composed partly of members of the Mathematical Association and partly of co-opted members drawn mostly from those living in the provinces and acquainted with some special local industry. Interchange of views and united effort would, it is believed, lead to the framing of profitable syllabuses of education and result in combined mathematical and technical skill adapted to the requirements of any particular district. Especially useful consequences might be anticipated if the co-operation of the Grammar Schools and County Council Schools could be secured.

The morning session closed with an interesting paper on "The Teaching of Geometry to First-year Pupils." This was contributed by Mr. Basil A. Howard, who dwelt on the twofold aim of such teaching—namely, as a mental discipline in the first place and an education in some of the fundamental principles of practical science in the second. The speaker maintained the attitude that the above-mentioned aims are compatible, and not antagonistic, and that they should influence the compilation and application of a carefully drawn-up elementary schedule.

In accordance with custom, the Presidential Address opened the afternoon meeting. Dr. Nunn, in his choice of subject, departed somewhat from precedent. He dealt with "Astronomy as a School Subject," outlining the possible character of a suitable course as suggested by his personal experience in pursuing and teaching this branch of science. His discourse was full of interest and had the great attraction of being illustrated by an excellent series of models bearing on the subject. The subsequent discussion was opened by Mr. W. G. W. Mitchell, and valuable contributions to it were made by the Astronomer Royal and others.

Mr. A. Lodge, whose name is very familiar both to teachers and students, read the final paper on "A Particular Set of Cubic Graphs."

## LIST OF MEETINGS.

1918.—Dec. 31.

ANNUAL MEETING OF THE ASSOCIATION OF PUBLIC SCHOOL SCIENCE MASTERS. London Day Training College. Presidential Address by Colonel Sir Ronald Ross.

1919.—Jan. 1.

INAUGURAL MEETING OF THE CONFERENCE. University College. Address by the Rt. Hon. H. A. L. FISHER, M.P. Mr. Birrell presiding.

HEAD MASTERS' CONFERENCE. Guildhall. Dr. David presiding.

ROYAL DRAWING SOCIETY. University College. Lecture by Mr. Percy Griffiths.

Jan. 2.

PARENTS' NATIONAL EDUCATIONAL UNION. University College. Prof. de Burgh on "The Ideal of Educational Reconstruction"; Miss H. E. Wix on "Continuation Schools"; Signorina Lunati on "Educational Ideals in Italy"; and M. Emile Cammaerts on "Educational Ideals in Belgium."

TEACHERS' GUILD. University College. Colonel Lord Gorell on "The Education of Men on Military Service"; Prof. Hearnshaw and Miss Levett on "National and International Ideals in the Teaching of History."

NATIONAL SOCIETY OF ART MASTERS. University College. Presidential Address by Mr. J. Harrison; Sir Frank Warner on "Industrial Art."

SIMPLIFIED SPELLING SOCIETY. University College. "Further Experiments with Simplified Spelling in Elementary Schools." Prof. Ripman presiding.

ASSOCIATION OF HEAD MASTERS. Guildhall. Reception by the Lord Mayor; Inaugural Address by the President (Mr. F. B. Malim); Joint Meeting with Head Masters' Conference.

ASSOCIATION OF ASSISTANT MASTERS IN SECONDARY SCHOOLS. London Day Training College. Annual General Meeting. Address by Lord Gainford. Mr. S. B. Lucas presiding.

MATHEMATICAL ASSOCIATION. London Day Training College. Address by Dr. W. P. Milne.

Jan. 3.

ASSOCIATION OF HEAD MASTERS. Guildhall. Address by Mr. Spurley Hey. Service at St. Mary Abchurch.

ASSOCIATION OF ASSISTANT MASTERS IN SECONDARY SCHOOLS. London Day Training College. Resumed meeting.

CIVIC AND MORAL EDUCATION LEAGUE. University College. Mr. Kenneth Saunders on "Civic Education in the Army"; Dr. Eric Pritchard and Dr. Constance Long on "The Physical and Psychological Bases of Character."

TRAINING COLLEGE ASSOCIATION. University College. Presidential Address by Miss Mercier; Mr. George Lansbury on "The Task of the Teachers."

SCHOOL NATURE STUDY UNION. University College. Mr. F. J. Chittenden on "The School Garden in Education."

CHILD STUDY ASSOCIATION. University College.

SCHOOLS PERSONAL SERVICE ASSOCIATION. University College. Rev. J. W. Bottomley on "The Education, Welfare, and Recreation of Young Workers."

NATIONAL ASSOCIATION OF EDUCATION OFFICERS. Manchester Town Hall. Reception by the Lord Mayor. Annual Conference.

ASSOCIATION OF HEAD MISTRESSES. University College. Mr. G. K. Devadhar on "The Education of Women in India."

JOINT CONFERENCE. University College. Prof. John Adams and Prof. Ballard on "The Utility Motive in Education." Sir W. Henry Hadow presiding.

NATIONAL ASSOCIATION OF EDUCATION OFFICERS. Manchester Town Hall. Annual Conference.

EUGENICS EDUCATION SOCIETY. University College. Prof. Arthur Thomson on "The Eugenic Ideal in Education."

NATIONAL ASSOCIATION OF MANUAL TRAINING TEACHERS and THE EDUCATIONAL HANDWORK ASSOCIATION. University College. Prof. Percy Nunn on "Co-ordination of Handicrafts and Science in the new Continuation Schools"; Mrs. Kimmins on "Soldier Students." Sir Cyril Cobb presiding.

Jan. 6.

LEAGUE OF NATIONS UNION. University College. Miss Maude Royden on "Education and the League of Nations." Prof. Muirhead presiding.

ASSOCIATION OF SCIENCE TEACHERS. University College. Prof. Oliver on "The relation between School and University in regard to Science Teaching."

NATIONAL HOME READING UNION. University College. Sir Henry Hadow and others. Dr. Alex Hill presiding.

DIRECTORS AND SECRETARIES OF EDUCATION. County Hall. Address by Mr. W. A. Brockington.

Jan. 7.

ART TEACHERS' GUILD. University College. Informal discussion on "Drawing Examinations in Secondary Schools."

UPLANDS ASSOCIATION. University College. Prof. Shelley on "Freedom for the Child"; Miss Purvis on "The Activities of the Uplands Association."

EUGENICS EDUCATION SOCIETY. University College. Prof. McBride on "Eugenics and Sex Instruction." Major Leonard Darwin presiding.

ASSOCIATION OF ASSISTANT MISTRESSES. University College. Annual Meeting. Miss Laurie presiding.

Jan. 8.

NEW IDEALS IN EDUCATION. University College. Miss Enright on "Literature and the Child." Mr. E. G. A. Holmes presiding.

ASSOCIATION OF UNIVERSITY WOMEN TEACHERS. University College. Conference on "Some Mental Effects of Loss of Sleep," opened by Miss May Smith. Miss Stephen presiding.

ASSOCIATION OF ASSISTANT MISTRESSES. University College. Miss Margaret Bondfield on "The Place of the School in Society."

PRIVATE SCHOOLS ASSOCIATION. University College. Council Meeting. Mr. Stanley Maxwell presiding.

KING ALFRED SCHOOL SOCIETY. University College. Prof. Fleure on "Human Geography." Mr. John Russell presiding.

Jan. 9.

FROEBEL SOCIETY. University College. Prof. Shelley on "The New Educational Realism." Mr. C. G. Montefiore presiding.

PRIVATE SCHOOLS ASSOCIATION. University College. Annual Meeting. General Business Meeting.

Jan. 10.

ASSOCIATION OF TEACHERS OF DOMESTIC SUBJECTS. University College. Mr. Robert Weir and Mrs. Ernestine Mills on "Home Planning."

MONTESSORI SOCIETY. University College. Mr. Homer Lane on "Factors in Children's Conduct." Miss Maude Royden presiding.

FEDERATION OF UNIVERSITY WOMEN. University College. Annual General Meeting.

MODERN LANGUAGES RESEARCH ASSOCIATION. Bedford College. Prof. Boas on "The Promotion of Modern Language Research among Teachers." Sir Sidney Lee presiding.

Jan. 11.

JOINT CONFERENCE. University College. Major Ernest Gray, Miss Margaret Frodsham, and others on "The Work of Continuation Schools." Mr. Beresford Ingram presiding.

HISTORICAL ASSOCIATION. University College. Prof. Firth on "How to Mitigate the Evils of Examination."

A REVIEW OF IDEAS AND METHODS.

40

(Founded 1847.)

Jan. 1919

## THE CARSON-SMITH MATHEMATICAL SERIES.

By G. St. L. CARSON, M.A., M.Sc., Reader in Mathematics in the University of Liverpool, formerly Head Mathematical Master in Tonbridge School; and DAVID EUGENE SMITH, Ph.D., LL.D. Professor of Mathematics in Teachers' College, Columbia University.

### ELEMENTS OF ALGEBRA.

Part I.	340 pages	...	...	...	s.	d.	
					3	6	net
Part II.	214 pages	...	...	...	3	0	„
Parts I and II.	538 pages	...	...	...	5	6	„

### PLANE GEOMETRY.

Part I.	266 pages	...	...	...	s.	d.	
					3	0	net
Part II.	216 pages	...	...	...	3	0	„
Complete.	482 pages	...	...	...	5	6	„

Through the emphasis, wherever possible, of the practical aspects of the subject, the CARSON-SMITH MATHEMATICAL SERIES stimulates the student's interest and brings home to him the fact that mathematics has a direct bearing upon the requirements of everyday life. The books abound in problem and rider material of a practical nature, but at the same time the need for skill in actual performance has not been overlooked, and both volumes contain those salient features of the successful drill book.

But an ability to *do* mathematics is not all that is gained by the pupil who uses these books. In addition, the authors assist him towards gaining that thorough understanding of fundamental mathematical principles which is essential if he is to pursue his study beyond its elementary stages, and which makes mathematics when properly taught, of unique value as an instrument of culture.

## SCIENCE.

The books mentioned below are the result of an attempt to place the teaching of science on a somewhat broader foundation than heretofore. They have been written primarily for the non-specialist science student whose study of the subject will probably cease when he leaves school. The purpose of the books is to give this type of student a conception of the true character of scientific enquiry, a knowledge of fundamental scientific principles, and an understanding of their manifold applications to those scientific phenomena which play such an important part in everyday life.

### ELEMENTS OF GENERAL SCIENCE.

By O. W. CALDWELL, Ph.D. and W. L. EIKENBERRY, B.S. 308 pages, illustrated. 5s. net.

### A Laboratory Manual for work in General Science.

By O. W. CALDWELL, W. L. EIKENBERRY, and C. J. PEIPER. 134 pages. 3s. net.

### FIRST COURSE IN CHEMISTRY

By W. MCPHERSON and W. E. HENDERSON. 416 pages, illustrated. 6s. net.

### Laboratory Exercises

to accompany the above. By W. MCPHERSON and W. E. HENDERSON. 128 pages. 2s. net.

### FIRST COURSE IN PHYSICS.

By R. A. MILLIKAN, Ph.D., Sc.D., and H. G. GALE, Ph.D. 428 pages, illustrated. 6s. net.

### Laboratory Manual of Physics.

By R. A. MILLIKAN, H. G. GALE, and E. S. BISHOP. 135 pages. 3s. net.

### EVERYDAY PHYSICS.

By J. C. PACKARD. 136 pages, illustrated. 3s. net. A manual of applied science closely correlating the school course with the pupil's everyday life.

### THE SCIENCES.

By E. S. HOLDEN. 244 pages, illustrated. 2s. 9d. net.

An elementary science reader for children.

## THE TEACHERS REGISTRATION COUNCIL.

Representative of the Teaching Profession.  
Constituted by Order in Council  
29th Feb., 1912.

The Council maintains an Official Register of Teachers who have been accepted for admission under the Conditions of Registration.

The Register is open to qualified teachers in every branch, and until the end of 1920 experience under approved conditions is the sole qualification required. After that date the conditions will become more stringent.

Particulars and Forms of Application may be obtained from

The SECRETARY,  
Teachers Registration Council,  
47 Bedford Square,  
London, W.C. 1.

## THE COLLEGE OF PRECEPTORS.

Incorporated by Royal Charter.

BLOOMSBURY SQUARE, LONDON, W.C. 1.

### MEMBERS' MEETING.

A Meeting of Members and their friends will be held on Friday, the 21st of February, at 6 p.m., when the chair will be taken by the Dean of the College, and Professor H. Bompas Smith will deliver a Lecture on "The Standpoint of Educational Psychology."

### MEMBERSHIP.

Membership of the College is open, under certain conditions, to persons engaged in education.

Particulars concerning the privileges of membership may be obtained from the Secretary.

### EXAMINATIONS.

The College holds Examinations of Teachers for Diplomas, and Examinations of Pupils for Certificates. The Regulations may be obtained from the Secretary.

### THIS ISSUE CONTAINS:

A Reply by M. J. Dalcroze  
to

A Criticism of Eurhythmics,  
and

Essays by Dr. H. Valentine Knaggs

on The Diet of School Children,  
by Silas Birch on John Ruskin  
and Education, and by Margaret  
Corner on What the Schoolboy  
Thinks.

The SUPPLEMENT deals with  
Continuation Schools.

## UNIVERSITY CORRESPONDENCE COLLEGE

(Founded in 1887.)

### PRINCIPAL:

WILLIAM BRIGGS, LL.D., D.C.L.,

## MRS. CURWEN'S PIANO-FORTE METHOD. EAR TRAINING AND SIGHT SINGING FROM SOL-FA AND STAFF.

TRAINING CLASSES for MUSIC TEACHERS and STUDENT TEACHERS are held at the Wigmore Hall Studios, Wigmore Street, W.1, by Miss SCOTT GARDNER and Miss MARGARET KNAGGS, A.R.C.M., on Wednesdays and Saturdays. — Write for Syllabus to either teacher at the studio.

## JOINT SCHOLASTIC AGENCY, LTD.

9 Brunswick Square, W.C. 1.

This Agency is under the direction of a Committee representing the following leading Educational Associations:—

HEAD MASTERS' CONFERENCE.  
INCORPORATED ASSOCIATION OF HEAD MASTERS.  
COLLEGE OF PRECEPTORS.  
TEACHERS' GUILD.  
ASSOCIATION OF ASSISTANT MASTERS.

Registrar: Mr. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments. The lowest possible fees are therefore charged.

Interviews by appointment from 12 noon to 1.30 p.m., and from 3 p.m. to 5 p.m.; on Saturdays, from 11 a.m. to 12.30 p.m.

A PROSPECTUS will be sent on application.

## JOINT AGENCY FOR WOMEN TEACHERS.

OAKLEY HOUSE,  
14, 16, & 18 BLOOMSBURY STREET, LONDON, W.C. 1.  
Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools Association.

THIS Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

No Registration Fees are charged to members of the above Associations, and their Commissions are reduced.

Hours for Interviews:

11.30 a.m. to 1 p.m., and 3 to 5 p.m.

Saturdays, 11.30 a.m. to 1 p.m., and 2 to 3 p.m.

When possible, special appointments should be arranged.

Registrar, Miss ALICE M. FOUNTAIN

Head Mistresses and Principals of Public and Private Schools requiring English or Foreign Assistant Mistresses can, on application to Messrs. GRIFFITHS, POWELL & SMITH, have suitable Candidates placed in immediate communication with them free of charge.

A List of Vacancies will be forwarded to English and Foreign Assistant Mistresses and other Teachers on application. Liberal Salaries.

Messrs.

## TRUMAN & KNIGHTLEY, LTD.

Educational Agents,

158 to 162 OXFORD STREET,  
LONDON, W. 1.

Directors:

S. A. TRUMAN.

JAMES HEARD, B.A.

(Trinity College, Cambridge).

Telegrams—"TUTORESS, PHONE, LONDON."  
Telephone—Museum 1134.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

### A.—EMPLOYMENT DEPARTMENT.

#### (i) ASSISTANT MASTERS & TUTOR.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

#### (ii) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

#### (iii) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

### B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers.

All communications and inquiries are treated in the strictest confidence.

### C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. No charge is made for registration.

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

**PRIFYSCOL CYMRU. UNIVERSITY OF WALES.**

**THREE FELLOWSHIPS**, each of the annual value of £125, tenable for two years, are open to Graduates of this University, and **TWO OTHER FELLOWSHIPS** to those of them who have been engaged in National service. Applications must be received before June 1st, 1919, by the **REGISTRAR**, University Registry, Cathays Park, Cardiff, from whom further information may be obtained.

**UNIVERSITY OF LONDON. KING'S COLLEGE.**

**EVENING CLASS DEPARTMENT.**  
Courses are arranged for the Intermediate and Final Examinations for the B.A. and B.Sc. Degrees of the University of London.

# IMPORTANT EDUCATIONAL BOOKS

Second large Edition in the Press.

## THE PLAY WAY.

**An Essay in Educational Method.**

By H. CALDWELL COOK, M.A.

Demy 8vo, Illustrated from Photographs. **8s. 6d. net.**

"The book is of the first rank, and we feel that our duty at the moment is to secure that it should be singled out for close study by all who are prepared to revise their methods when fresh light is presented."—*Journal of Education*.

## THE PEOPLE OF ENGLAND.

**A Social History for Schools.**

By STANLEY LEATHES, C.B., M.A.

Vol. I. **THE PEOPLE IN THE MAKING.**

From the Earliest Times to the Invention of Printing.

Vol. II. **THE PEOPLE IN ADVENTURE.**

To the French Revolution.

Each volume 320 pp., with over 100 Illustrations. **2s. 6d. net.**

"We hope that Mr. Leathes's work, besides delighting the child with its unflinching fertility of interest, may stimulate the teacher to make such methods his own. . . . The pictorial illustrations are many and well chosen."—*Times*.

## HEINEMANN'S SCIENCE MANUALS.

### INTRODUCTORY ELECTRICITY AND MAGNETISM.

By CARL W. HANSEL, B.Sc.

Over 300 Illustrations and Diagrams. Crown 8vo. **2s. 6d. net.**

A complete first course in electricity and magnetism based upon actual experiment, and embracing the recent changes and recommendations of the Board of Education's new syllabus.

### A FIRST-YEAR COURSE IN GENERAL SCIENCE.

A Combined Text-book and Note-book.

By E. A. GARDINER, M.A., F.C.S.

**2s. 6d. net.**

This book presents an experimental course of general elementary science, and is an attempt to save time for the boy and labour for the teacher. It is divided into three sections:—I, Simple measurements. II, Some Common Apparatus and Instruments. III, Properties of Water and Air.

### EXPERIMENTAL DOMESTIC SCIENCE.

By R. H. JONES, M.Sc., F.C.S.

With over 80 Illustrations and Diagrams. Crown 8vo.

**2s. 6d. net.**

This book provides a suggested course for Domestic Science Schools and Girls' Schools generally, based upon the view that Science can be directly and adequately taught in the kitchen. The chief scientific principles in their application to domestic subjects are made clear by drawing upon everyday experience, and by the aid of kitchen utensils and commodities.

### EXPERIMENTAL MENSURATION.

An Elementary Text-book of Inductive Geometry.

By H. S. REDGROVE, B.Sc. (Lond.), F.C.S.

The special feature of this book is the *combination* instead of the usual separation of Elementary Geometry, Trigonometry, and Mensuration. It is suitable for first and second-year students of Technical Schools.

The Only Authorized Books on the Montessori Method.

## THE MONTESSORI METHOD.

By DR. MARIA MONTESSORI.

Illustrated. **8s. 6d. net.**

In this book Dr. Montessori gives a clear explanation of her method and the principles upon which it is based.

## DR. MONTESSORI'S OWN HANDBOOK.

**A Manual for Teachers and Parents.**

**3s. 6d. net.**

As a supplement to her larger book on the Method, Dr. Montessori has produced this explanatory manual, which is invaluable for all teachers.

A New Montessori Book.

## THE ADVANCED MONTESSORI METHOD.

By DR. MARIA MONTESSORI.

Vol. I. **SPONTANEOUS ACTIVITY IN EDUCATION.** **8s. 6d. net.**

Vol. II. **THE MONTESSORI MATERIAL FOR CHILDREN UP TO ELEVEN YEARS.** **12s. 6d. net.**

"A contribution to scientific pedagogy such as we have not had since the institution of the kindergarten eighty years ago."—*School Guardian*.

## A COMMON-SENSE ALGEBRA.

By ASA BURNISTON, L.C.P. (Hons.).

**1s. 6d. net.** With Answers, **2s. net.**

Suitable for use in the Upper Classes of Elementary Schools, in Evening Schools, and in the Lower Forms of Secondary and Technical Schools. An extremely useful and enlightened introductory algebra.

## ELEMENTARY BUSINESS TRAINING.

By V. H. ALLEMANDY.

Crown 8vo. **1s. 6d. net.**

This book is intended for use in the Upper Classes of Elementary Schools and in Commercial and Evening Classes.

## THE BRITISH ISLES.

By A. B. ARCHER, M.A.

Illustrated. **2s. 6d. net.**

This is the first book in a new series, forming a Secondary School course in Geography, and is suitable for the Lower Middle Forms.

## AVENTURES ET MERVEILLES.

**A Simple French Reader for Junior Forms.**

By C. V. CALVERT, B.A.

Crown 8vo. 300 pp. Illustrated. **2s. 6d. net.**

## FRENCH TRANSLATION AND COMPOSITION.

By H. J. CHAYTOR, M.A., and E. RENAULT, B.A.

Crown 8vo. **2s. net.**

## SCIENCE AND EDUCATION.

Edited, with an Introduction, by SIR RAY LANKESTER.

**1s. 6d. net.**

This volume contains seven lectures which were delivered by Whewell, Faraday, Latham, Daubeny, Tyndall, Paget, and Hodgson before the Royal Institution in 1854.

NOTE.—Mr. Heinemann will be glad to hear from teachers who have manuscripts on educational matters which they desire to publish.

## NOTES AND COMMENTS.

### The University Question.

THE Education Act of 1918 calls urgently for a post-script in the shape of legislation directed towards making a full provision for University studies. In this matter England is notoriously behind every one of the leading nations of the world. At the beginning of 1914 there were over 17,000 students in the University of Paris alone. Of this total over 3,000 were foreigners, attracted to Paris by the facilities for study and research. Here in England we have been content to set up a few provincial Universities and to add a few departments to Oxford and Cambridge. The new institutions have been cramped in their financial resources and have been compelled to do far too much work of a secondary school kind. The University of London remains as an amorphous body, with little or no sense of corporate life, a congeries of teaching institutions with a system of examinations attached. The expected and proper result of the working of last year's Act should be a large increase in the number of students who are able to pursue a University course with advantage. The secondary schools and continuation schools ought to discover and prepare a great wealth of latent ability, hitherto unregarded. But when this discovery is made there must be some opportunity to put it to use. The only way to provide this is to ex-

tend and develop our arrangements for University training.

\* \* \* \*

### The Need for Higher Education.

STRANGELY enough, some people will be found to assert that University training can be overdone, that it is undesirable to have any great number of people spending their time in higher studies, because they will thereby be rendered superfluous, and therefore discontented. This is precisely the argument which has been used against every proposal to extend elementary education. The country farmer doesn't "hold with" schooling because he thinks it a waste of time for boys who are to become labourers. Education is regarded as a social hall-mark, and a course at Oxford or Cambridge receives from the public assay the highest stamp of all. In a civilized community education should not be a hall-mark, but a birth-right. Every child born in such a community should be entitled to the finest intellectual training of which he is capable. Not only does the social system owe this to the child, it owes it no less to itself, since its continued wellbeing depends on the amount of trained intelligence in its ranks. With us there seems to be an absurd fear that, as a community, we may reach a dangerous point of saturation in higher knowledge. The real danger comes from the under-education of those who are called to administer our affairs, and

from the continued ignorance of those who decide our destinies at elections. Let us suppose that all working men had an educational equipment equal to that of the average Cabinet Minister—a modest enough demand—would it not follow that they would look for still higher attainments and efficiency in those they elected and in those who managed the country's affairs? It is certain that they would be more responsive to ideas and better able to co-operate with intelligence in the task of improving our social system.

\* \* \* \*

#### Immediate Reforms.

SOME necessary reforms in our University system should be made at once. In the fifteen modern Universities and University colleges of England and Wales, as recorded in the Board of Education reports for 1911-12, the average salary of a professor was £628, with a maximum average for a single University of £710. The average salary of all other teachers was £137, with a maximum average for a single University of £195 and a minimum of £82. More recently, Chairs have been advertised at £1,000, but the non-professorial staff is still grossly underpaid. The promised State grant may help to improve matters. The administration of some of the modern Universities calls for attention. Situated as they are in provincial cities, they are usually aided from the local rates, a form of support which is sometimes dearly bought, since it encourages the local City Councillor to seek notoriety by attacking the University. Thus in one city a man of this soaring type was able to carry a resolution that the local grant of £15,000 should be suspended until the University Council had agreed to dismiss a professor. In another city the Chairman of the Local Education Committee holds a paid post on the staff of the University to which his Committee allots an annual grant. In yet another place the local education official has declared his intention of bringing the University under the control of the Education Committee of the city. These things are wholly wrong, since the greatest service which the Universities can perform is their historic one of providing centres of independent thought where teachers and students may express their views openly, even if these views run counter to the official opinion of the day. As things are, some University professors dare not risk giving offence to the local grocer who happens to be a member of the City Council.

\* \* \* \*

#### Free Places in Secondary Schools.

A COMMITTEE of the British Association recently issued a report on the free-place system. It works well, they say, on the whole in schools where more than half the pupils are drawn from the public elementary schools. But they think that some "free-placers" would derive more benefit from attending higher elementary, junior technical, or trade schools. They would limit free places to children under twelve,

and have maintenance grants where strictly necessary. More generous scholarships to the Universities are also suggested, and the Committee declares that it is nothing but a mockery to offer a scholarship of £40 or £50 a year to a boy whose parents cannot afford a substantial addition to this sum. These observations merit careful attention, since they are, in effect, a condemnation of the free-place scheme as now worked. To begin with, there cannot be any very great number of secondary schools in which more than half the pupils come from public elementary schools. The policy has been to shepherd all young aspirants into the secondary schools, and to regard higher elementary, junior technical, and trade schools as an inferior substitute suitable for the second or third skimming of the elementary schools, after the cream had been transferred to the secondary school proper to make up the 25 per cent. of free admissions. In the light of this report, we must adjust our minds to the idea of a great diversity of secondary education, and we shall do well to dispense with the 25 per cent. requirement.

\* \* \* \*

#### Local Schemes.

PROBABLY the most important section of the Education Act is the one which calls upon Local Authorities to submit schemes covering all forms of education in their areas. An indispensable preliminary to such a scheme is a survey of the existing state of things, and this is already being undertaken in many districts. The Director of Education for Manchester has lately submitted to his Committee a memorandum which is outspoken and constructive. Provision is required for 20,000 children in nursery schools, for 37,500 in central classes and higher elementary schools, and for 4,000 additional places in secondary schools. New junior technical and commercial schools are needed for about 3,000 pupils, and continuation schools are wanted for 20,000 within the next three years, the number rising to 40,000 within seven years. Special schools for physical and mental defectives are also needed, and the number of school clinics should be trebled. If these deficiencies are to be found in Manchester, we may expect to find in the rest of the country a very grave state of affairs indeed, and it would be well if the authorities could publish a comprehensive Blue Book showing the condition of education as revealed by the reports of the local bodies. In the Manchester report there is no mention of schools which are not under public control, and this is especially remarkable in a district where there are many independent schools of varying quality. It is difficult to see how their existence can be ignored or how any trustworthy figures can be obtained if they are left out of account. The right plan would be to recognize their work, in so far as it is good, and encourage them to play their part as one of the "forms of education within the area."

**Mental Tests.**

THE accepted method of testing mental power has so long been that of examinations that it is difficult for us to realize that any other is possible. Yet Columbia University has lately decided to supplement the examination test by a series of psychological tests resembling those which have been used in selecting American candidates for commissions during the war. In the first instance these are to be applied at the matriculation stage. They are not objective tests of knowledge in various branches, but are rather intended to furnish an estimate of the candidate's general power and special aptitudes. The Army tests in America were a great success. In their early stages they were not strictly psychological, but aimed at classifying men according to their physique, previous occupation, intelligence, and school training. Thereafter came memory tests of various kinds, with tests of manual dexterity and reaction times. Special devices were constructed for the purpose of selecting men to act as look-outs on merchant ships, and one intended to test a man's skill in the sighting and firing of a gun was adopted by the American Navy. Young officers were taught to estimate the fitness of their men for special tasks. By these methods new standards were set up, apart from the customary educational tests. Here at home, the Leicestershire Education Committee, on the advice of the Director, Mr. Brockington, has decided to abandon the competitive examinations for scholarships. The result will be interesting, since the competitive examination is maintained, not merely to secure the selection of the best candidates, but chiefly to guard against any jobbery or favouritism.

\* \* \* \*

**Mr. Fisher on Teaching.**

THE President of the Board of Education recently visited Oxford and inspected the School of Instruction recently established by the War Office for the purpose of training teachers under the Army Education Scheme. In the course of an address to the students, Mr. Fisher said that the short course which those present were taking was rather in the nature of a hand gallop, but they were a body of men who had all received a good general education, and all that was aimed at in the course was to give them practical hints as to the best way in which they might use their general fund of knowledge in the instruction of others. The secret of good teaching was to make oneself absolutely certain that the class, even the most stupid member, should carry away something definite, two or three ideas at least—not facts, but ideas. They should not seek to cram the class with facts, but rather to give them thoughts which would enable them to organize facts for themselves.

**THE DIET OF THE SCHOOL CHILD.**

By Dr. H. VALENTINE KNAGGS.

FOR twenty years or more I have regularly been brought into contact with school children suffering from ill-health. It is very noticeable that children are not only very soon made ill by faulty diet, but that they are equally responsive to a correctly modified diet, when that form of treatment is given to the exclusion of drugs.

For several reasons it is undesirable to send a child to a boarding school with a special diet as part of its curriculum. Such special treatment is apt to excite jealousy among fellow scholars, besides entailing extra strain upon the kitchen department.

As an alternative, I submit that the principals of boarding schools should themselves be proficient students of dietetics, food chemistry, and food values, and should also include these most vital and necessary subjects in the school curriculum.

Wise principals will not blindly follow the general doctrines laid down in orthodox textbooks nor the statements of any one physician. Rather will they exercise their own critical discrimination and observation, to assist which I very gladly submit my own doctrines as expounded here and elsewhere.

The evils of the present system must be manifest to all who realize how vast and lamentable is the illness among children generally, and how completely it accounts for the large proportion of individuals inevitably graded "C3." I grant that poor housing, defective sanitation, inadequate ventilation, and the overcrowding incidental to town life do exert a powerful and baneful influence upon the growth and development of children, but I also maintain that faulty diet is the most potent evil of all, and the main factor in producing and continuing a defective population.

It is not so much a matter of quantity as it is of quality and of the types of food selected.

I hold, and experience seems to confirm this, that a child over two years of age should be given as much *hard, dry, natural* food as it asks for.

I strongly object to mushes and soft pappy foods, because sooner or later they induce acidity and digestive troubles and *altogether nullify the child's natural instincts*. The reason for this must be obvious. Not only is digestion strained by the regular use of mushes, but the very softness of the repast leads to the bolting habit, the common precursor of events which lead to the C3 state. All starchy nutriment eaten in a dry hard state are subjected to the action of the saliva, which converts the starch into a soluble malted type of nutriment which is readily assimilable. A child at school should not be given oatmeal porridge, because it is a mush. Crisp, dry oatcake should be served instead. The child likes oatcake better than porridge, when used to eating it, and it agrees well with him, whereas oatmeal porridge, bread and milk, or grape nuts sopped in warm milk, although easy to prepare in large quantities, induce digestive difficulties which lead to tiredness and inability to concentrate the mental faculties. Milk puddings are equally bad when served at the midday meal as an after-course. But there are alternatives: for example, a stiff rice pudding is excellent, when turned out of its dish, and then remade and baked

into dry stiff rice cakes or scones, which necessarily take time to masticate. A well baked Yorkshire pudding is, for the same reason, preferable to a soft type of batter.

An article of diet, which, contrary to common belief, I have found to have much malign influence upon a child's welfare, is fresh milk. I am personally convinced that it is a gross mistake to give children cow's milk as a beverage, added to all the other foods which they are taking. Especially baneful is the habit of bringing a glass of fresh milk to the scholars at 11 a.m. A far better plan is to let the child partake of an apple, a banana, or some other seasonable fresh raw fruit—or, still better, abstain till dinner time. The milk sugar present as one of the chief ingredients of fresh milk does not assimilate well if taken mixed up with a medley of other and often antagonistic foodstuffs. My own observations go to show that fresh milk is a good food if taken alone, as a baby imbibes it, or as an adult may take it during what is called the milk cure. In other cases the use of fresh milk should, as far as possible, be excluded from all dietaries.

The best method of dealing with milk for school use, always providing it is pure and preservative free, is to buy a separator and at once separate the cream, which can be used for flavouring beverages or eaten with food, while the skimmed milk can be made into cottage cheese, which is one of the best body-building foods that a child can have. The cottage cheese is easily made by setting the skimmed milk in large shallow pans and leaving it there until it strongly curdles into a junket. The time to allow for this to happen is usually short in summer time and much longer in the winter. It is not wise to make the junket artificially by means of rennet or lemon juice, as by this procedure the milk sugar is not altered. When milk sours naturally the milk sugar is transformed into lactic acid. When the junket has formed, the contents of the pan are poured into a cloth filter, and the curd which remains upon the cloth is actually best cheese. The flavour is greatly improved if 25 per cent. of fresh cream is added and well incorporated with the curd. Children thrive on cream and cottage cheese in a way that they could not possibly do if permitted to consume fresh milk freely as a beverage.

Another important matter for consideration of every principal of a school is that of the consumption by children of manufactured sugar, whether taken as table sugar or as sweets. I look upon sugar as a very concentrated type of food, and as such I think it should be used only as a condiment. As a food it is apt to induce acidity. It is highly important to teach each child the truth of this statement. Sugar, sweets, or chocolates should be rationed, and the child should be led to do this voluntarily.

Moreover, the usual dried fruits, in the shape of figs, dates, prunes, and raisins, or "fruit and nut cakes," are the best forms in which a child can take sugar. These are natural types of sugared food, and they satisfy the normal child craving for sweet things.

There are the best possible reasons for giving children a good quantity of salad each day, as well as casserole-cooked vegetables. No animal can be healthy for long unless some raw food is taken during the day. Salad should be carefully washed, hand-picked, and appetizingly served. Children get to like it very

much after a time. In my booklet on salads,\* I have shown how erroneous is the plea that salads are only available during the summer months. Celery and watercress are at their best during the colder seasons of the year. They come as a change from the lettuce, mustard and cress, radishes, and other varieties which rightly belong to the summer time. Salads supply the organic mineral salts in just that right combination of dosage which Nature requires. Salad supplies the best possible material for building and consolidating the fast-growing organism of the child. Unfortunately, the very word "salad" is anathema at many boarding schools, because of difficulties raised in the kitchen department. No one likes the task of washing salads, especially when the water is very cold. It is also a tedious process if much of it has to be done. It becomes, therefore, a question of educating and conciliating cooks and scullery maids, in their own interests, as well as to ensure the health and welfare of the rising generation.

As far as the general arrangement of meals is concerned, I strongly advocate three meals a day: (1) breakfast, (2) midday dinner, and (3) supper. No food should be taken between these meals. The following menu is an excellent type, suitable for an average school child, when times are normal and supplies abundant and inexpensive:—

*Breakfast.*—An egg, or 2 oz. of cottage cheese, or 1½ oz. of ground nuts, such as shelled pine-kernels, almonds, hazels or walnuts; brown bread and butter; a little jam or marmalade. Hot lemon barley-water would make the best beverage. Tea, coffee, and cocoa are not suitable for children.

*Dinner.*—Fish, or meat, or poultry; potatoes, baked in their skins; casserole-cooked green vegetables; and bread. As second course, a jam roll or boiled fruit pudding would be appropriate. Cold water would be a good beverage here. Children in vegetarian schools could take ground nuts, ordinary cheese, or an egg dish as an alternative to the flesh foods named. The nuts should not be cooked in hot fat or made up into rissoles or "roasts," as when this is done the nut fats become decomposed and markedly indigestible. The boiled puddings can be made with ground nuts or nut suet in the place of meat suet or lard. Nuts are not indigestible when used in boiled puddings, because the process does not subject the nut fats to a higher temperature than that of boiling water—viz. 212° Fahr.

*Supper.*—2 oz. of cottage cheese or ordinary cheese, or 1½ oz. of ground or whole nuts; mixed salad, with a dressing of oil, lemon, and sugar; oatcakes, or rice scones, or hard wholemeal biscuits and butter. Hot clear vegetable soup would be a wholesome beverage at this meal.

Every principal will realize that temperamental considerations are important and that all children cannot be dieted alike. My own opinion is that there comes a time in the evolutionary development of every individual when the habit of flesh-food eating becomes æsthetically and physically distasteful, and that on no account whatever should any child with a marked disinclination for flesh foods be forced, or even tempted, to eat them. All boarding schools would do well, therefore, to take into consideration the necessity of understanding the subject of scientific food values, with this possibility in mind.

## WHAT THE SCHOOLBOY MAKES OF IT ALL.

By MARGARET CORNER, M.A.

My curiosity to know what the school child makes of it all was less keen when I taught girls. School-girls, while personally more mature than boys, expend less thought and attention on externals and systems. Teaching subsequently in a boys' school, however, I discovered that they have more impersonal opinions. They discuss subjects of external and general import, though their judgments may be simply those they have heard from their elders. I soon gathered that they must have a number of ideas on the system of which they are the subject—some of them perhaps their own; the majority, no doubt, those of their parents.

Our professional conflict with the lay mind of the parent usually leads us to the conclusion that, although we submit, sometimes sorrowfully, to his right over his own child in particular, he knows nothing about education in general.

We are quite accustomed to say that the average Britisher takes no interest in education, but he is not without opinions on the system of school as it stands. He might find it difficult to formulate these to a professional, but he is almost sure to have expressed them in his own circle.

I was sure that these opinions would never be communicated to me wittingly, but I might extract some part of them by means of a device.

I therefore invited Upper School boys, at chance times when a period was to be filled in, to write a letter explaining to some correspondent what school would be like if it were just as they would have it. I explained that no particular school should be taken into account, and said the letters might be written with the utmost frankness—that a candid opinion, indeed, was the only one of any value to me. I added an assurance that the letters would never be referred to, or meet any other eye but mine. I took care that no class knew beforehand of the letter.

The letters suffered, no doubt, from all the faults of impromptu composition; certainly they could not be exhaustive, but undoubtedly the more important of the points that had been frequently subject to discussion at home, must have sprung into the mind even at such short notice. I became possessed of over a hundred (107) letters, representing, on the whole, as many independent opinions. A few descended to personalities, and some of the smaller minds gave air to their private resentments; one smarted under a prohibition concerning a fountain pen, while another found fault with the pattern of his school cap. But there were few letters from which at least one opinion of general application could not be extracted.

Sports formed the *summum bonum* of most boys' ideal school life, and fifty-seven enlarged on the theme. In some cases it formed the only topic, and was discussed in all its delightful possibilities. So many, or all, afternoons in the week were to be devoted to sports, matches arranged, a cycling club organized, other games besides football and cricket should be practised, shooting (six) enforced, more "gym." (18) arranged; and in particular swimming seemed to recommend itself as one of the most desirable of exercises.

Almost as many boys expressed themselves on the question of home-work. There is indubitably a widespread and sincere feeling among the boys and their parents that the former are overworked. A number of boys endeavoured to justify their attitude. They urged that five or six hours' "mental" work daily was more than sufficient; they had a good deal to say on health, fresh air, and exercise, or argued that the output would improve on less hours of work. Several suggested that they would willingly do more home-work in winter if it could be diminished in summer. Not one hinted that he could do more on the whole, though three would raise no objection if the school hours were a little longer. Eight, however, wanted to have them shortened, but some of these were obvious slackers. Five boys suggested that the same number of hours should be arranged to begin at 7 or 8 a.m.

On the subject of holidays and recreation, there were authoritative pronouncements. "With regard to holidays, I think they are highly necessary. Even the most durable of boys require a time of rest. Keeping your brain at work for long periods without any intervals of rest is very trying to the nerves, and is apt to lead to brain fever"; or, again, "Recreation is very necessary, however short it may be, providing it comes regular." Four people suggested that holidays might be shorter in winter and longer in summer.

Discipline was mentioned by thirty-seven writers. Of the fourteen who proposed the abolition of 'detention' (when the weekly half-holiday has to be forfeited), some no doubt voiced a personal feeling, due to bitter memories, but others urged that the system was futile and a mere waste of time, with no good result. Five put forward corporal punishment as a substitute (and always on the ground of less time expended), but seven thought that this also might be less in quantity. One declared frankly that he preferred punishment to sarcasm. Eleven boys, on the other hand, were for the strict maintenance of discipline. Cheating and cribbing were often complained of, and hints given as to how they might be obviated. (I am not at all sure that it was not the experts in the art who complained most bitterly and offered the most abundant remedies.) One boy only, who may or may not have heard of the Little Commonwealth, thought that a committee of boys might be useful in this connexion.

This suggestion interested me, and I took an opportunity of conveying it to my own form (Upper Fourth). Its extraordinary novelty attracted, and, after its possibilities had been eagerly canvassed, I suggested that the scheme should be carefully thought over and perhaps discussed. After a due interval I again, without the form's knowing beforehand of my intention, requested a letter with each boy's full, frank, and confidential opinion on a self-government committee. The answers displayed thought, frankness, and an overwhelming majority against the proposal. In their opinion, the boys on the committee would use the opportunity to work off personal grudges, or the punishments would throughout be too lenient (they are unable, evidently, to get rid of the idea that they are a set of allies working against the common enemy, the master); since, they consider, one boy could not tell of another, cribbing would continue

and get worse. They anticipated a great increase of fighting, jealousy, hatred, bullying.

The greatest difficulty seemed—would a committee punish its own members? On the other hand, the boys would have a court of appeal beyond the master, and his hastiness, involving injustice, would cease to have effect. They thought that the master's great difficulty in punishing is that, all too often, he does not know, and has not time to get at the truth.

The subjects of instruction interested many boys. It was noteworthy how many expressed a dislike for botany and Nature study or a thorough conviction of its uselessness (fourteen). "Botany," said one, "is absolutely no good at all in a smart young fellow's life." Singing meets with similar disapproval (ten). The important subjects most writers accept as essential. Only four boys pleaded for less mathematics, eight for more, and two others asked for the national introduction of the metric system. Languages are much desired. Many asked for additional languages—Russian, Spanish, Italian—or dwelt on their use and importance in general (fifteen). Only one said that German should be abolished ("after the war"); most mentioned it with French. A few remarks were offered on English, the importance of which does not seem to be appreciated. One declared it to be "very boaring" and one asked for "poems and not grammar." A few refer to spelling. The ancient languages receive condemnation from three writers, but four admitted their value. One asked that such a subject might be optional and the lessons held after school. The general opinion on geography coincided with this quotation: "Geography ought to be taught, but not 'a piece of water surrounded by land is a lake,' but different railways and stations and what their Terminousi are." "More interesting" lessons, as on the "formation of the war," were asked for (three).

Apart from personalities, little was said on the teaching. One discussed method in some detail. There were one or two bold assertions that masters who cannot control their classes ought not to teach. But the most definite feeling in this connexion is against the so-called lady teacher. I cannot here discuss how far she may be considered to have been a success in boys' schools on the whole, but unquestionably she is not looked on favourably by the boys in this school. She is discussed twelve times, and no one has a word of praise for her. A few sneer, "She may undoubtedly be very clever," but the majority content themselves with demanding her instant expulsion. Two people refrain from such unequivocal criticism, but that is only from pity. They are disgusted with those boys who "take advantage" of her (she seems to them too weak to look after her own advantage). Rather an interesting light on her possibilities as whipping-boy for the masters is shed by the following: "If a master uses a cane the pupil will keep quiet, but revenge on the master, or if they do not get a chance they will take the opportunity on the lady teacher!" Nor am I prepared to say that this does not occur.

One last quotation shows from which class these views were drawn. "Nature study could also be done away with, as not many people go in for that kind of thing; they nearly all go in for typists or junior and senior clerks."

## VOCATIONAL EDUCATION.

By Professor JOHN DEWEY.

[Concluded.]

### SOCIAL TRAINING.

By social competency I mean the necessity for a certain surrounding atmosphere and spirit in connexion with the industrial and physical training, the necessity for methods of training, the necessity for methods of industrial management and operation which will promote civic efficiency and the co-operative spirit. The industry should be run as far as possible on a democratic basis. Co-operation in respect to sharing in products or in profits is not nearly so important as the co-operation in the method of management. The aim should be to secure training of persons in and for groups. This means, of course, putting individuals in positions of responsibility as rapidly as they are prepared to take it, to give them the experience of directing, of leading as well as of being led, so as to initiate the individuals into what at the present time are so largely the mysterious secrets of trade management and of the marketing of goods, taking men out from the haphazard industrial education which individuals now get, whether in school or in labour itself, which leaves so many of them totally unfitted for anything beyond routine labour under the direction of others.

### EDUCATION FOR LEISURE.

No mere schemes of Governmental action will ever make a success without this educational reconstruction. Education for leisure and for the purposes of sensible, well-ordered and æsthetic recreation, covers what we already call the rudiments of a general education. In other words, they should be inspiring and releasing rather than disciplinary and scholastic. Just as music has been found to be a practical human necessity in our camps at present and just as provision for various kinds of social æsthetic recreation seems to be a practical human necessity, so of course these same things continued and extended would constitute a large part of the type of a vocational education preparing for the leisure time of the labourer after the war.

Probably the greatest social waste which exists at present is our failure to detect tastes, capacity, and ability and find for them the channels in which they can operate with advantage to their possessors and with usefulness to others. We either put all individuals through an undifferentiated training—a required uniform training—in the pious hope that it will catch some of them; or else, under the name of an elective system, we permit individuals to drift along according to their own untrained and unenlightened wishes from moment to moment. We have as yet, I think, absolutely no conception of the possibilities of an education, both with respect to personal happiness and social usefulness, which should engage youths

in activities sufficiently varied and sufficiently productive to detect their capacity, needs, and powers.

#### THE PART OF HIGHER EDUCATION.

The social idealism of the young people of our country has not been genuinely touched and called upon in times of peace, and we have, I think, to admit that one of the features of the war system has been that hundreds of thousands of young men have been brought to view their training and their capacity in the light of social needs and demands. We all know how large are the organized resources of the sciences of physiology, hygiene, medicine, political economy, psychology; how these sciences have been organized and mobilized on a large scale for national use. Now, through this fact, hundreds and thousands of scientific and technical men have learned in an intense way new lessons concerning the social importance of their particular branch of knowledge and skill. There are, for example, over two hundred youths of our country who have been trained in our schools in the science of psychology who are immediately going to have their activities put to actual national use. That is one illustration with which I happen to be personally familiar, but it merely indicates what is going on in all lines on account of the war throughout this country. They have been given a chance to translate specialized knowledge into some direct public and national service. I don't think that if many of the men have a chance to use their specialized learning, their scientific knowledge, or their artistic skill after the war in some constructive form of national service, they will be impelled to withdraw into their former aloof seclusion and continue to carry on their work in the remote over-specialized, over-technical way in which most of us were carrying it on before.

#### SOME OBJECTIONS.

There is one answer, not exactly a reply, but a rejoinder to some such project as I have endeavoured here to paint in its large outline, and that is the old answer: it is impracticable, for it has never been done. I should like to ask one question: is it practicable to expect a more ordered and a more harmonious and peaceful type of social life in the future except upon the foundation and substructure of an educational system which has been framed on a large scale for this particular purpose? The nations of the world have found the capital and resources, the money by the billion, for the maintenance of the social values and standards of these countries when they were threatened with disintegration by an enemy from without. Is it not absurd to say that the resources and the money may not be made available nationally for a positive and constructive development and ordering of the social values in time of peace?

Whatever mistakes or blunders and defects there have been in our preparation in the last few

months, I think it has been demonstrated that it is possible to organize and mobilize the intellectual and moral resources, as well as the financial resources of the nation in a period of national stress. If the educators will take upon themselves the primary responsibility for settling down to a consummation and elaboration of the scheme, I am sure that they will find among the men in science and the men in art, painting, music, and so on, among the statesmen of the country, and among the larger-visioned captains of industry, a kind of co-operative assistance which will enable a plan to be worked out so that we shall not continue inert, unprepared, going on with a policy of patching up and of muddling through till some other social catastrophe, even greater than the present one, shall overwhelm us.

#### AUTRES MŒURS.

COME, my Muse, a lofty pæan; cleave me now the empyrean; though the task be Herculean, though with but a chasten'd joy,

'Tis a case for lyric fire, though in numbers "by desire"; sing the new millennial Higher Education of the Boy: Nay, your strings could not be flat in such a part to tear a cat in; you shall walk in silk and satin by the editorial fee,

Hymn the dirge of Greek departed and the swift decease of Latin, hail the -atics and the -amics and the -ologies with me.

Though the way of Peace be shrouded, though the sky be overclouded, though the journal still be crowded with the tales of civil war,

Though the nascent League of Nations, and the farthest occupations, leave our mutual relations just a little as before;

Gone for ever is the dreamy maze of *τύπτω* and *τίθημι*—'tis an earnest that the seamy side of life hath passed away, That the Future, oleaginous, electrified, and steamy, in a Halo of Efficiency, is dawning with the day.

Now shall every tender scion track the daisy, dandelion; count the ohm and eke the ion, 'neath the ægis of the Board,

Or evolve a new and better sparking-plug or carburetter (lo, the nation may beget another Mr. Henry Ford!).

Cultivate a predilection for the dainties of dissection, be revealing for inspection things the ancient might not know,

Show that *Iepius* his appendix may retain with circumspection, prove that *anodon* concealeth many ganglia in his toe.

And for history and grammar shall the neo-coach and crammer teach the swinging of the hammer and the handling of the file,

And in place of rhyming neatly shall their man be armed completely for the art of stoking fealty, raising crane, or sinking pile:

So, my Muse, you must be speeding to a course of special reading, for you surely will be needing to renew your stock-in-trade.

And discard withal for ever your Parnassian birth and breeding, or content you with existence, sad and silent, in the shade.

A. C. B.

## EURHYTHMICS.

A REPLY TO "MUSICUS" BY  
M. J. DALCROZE.

To the Editor of "The Educational Times."

MONSIEUR,—Je viens de lire l'article consacré par votre collaborateur "Musicus" à ma méthode de Rythmique. Il est conçu dans un ton d'ironie facile que je ne veux pas employer en ma réponse, alors même qu'il puisse me paraître permis envers un critique anonyme qui paraît ne pas avoir lu les ouvrages qui composent ma méthode, et qui parle par conséquent de ce qu'il ne connaît pas. Si "Musicus" avait songé à m'écrire particulièrement ou à profiter de mon séjour à Londres (séjour annoncé depuis un mois déjà), je me serais fait un véritable plaisir de le mettre au courant du contenu de ma méthode, qui comprend non seulement l'enseignement de la Rythmique (élément physiologique de la musique) mais l'étude approfondie des tonalités, des accords, des modulations, etc., ainsi que de l'harmonie au piano. Le tout forme la matière de nombreux volumes. Je lui aurais dit aussi que je n'ai jamais cherché à combattre les méthodes de chant existantes, ni à leur substituer la mienne. Aucune comparaison ne peut du reste être tentée, puisque mes efforts pédagogiques portent surtout sur le développement logique des facultés *auditives* et sur celui du sens métrique et du sentiment *rythmique*, qu'aucun enseignement musical, à ma connaissance, ne fait entrer en son programme autrement qu'en théorie. En écrivant ma méthode j'ai simplement cherché à combler une lacune, et les musiciens qui l'ont étudiée sérieusement veulent bien reconnaître que j'y ai réussi. Il est à souhaiter que d'autres pédagogues musicaux se livrent à des recherches du même genre poussées par cette conviction, qui est la mienne, qu'il ne suffit pas d'apprendre aux enfants à chanter et à jouer du piano, mais qu'il convient de les mettre à même d'*écouter* la musique, d'apprécier les rapports des mélodies et des harmonies, les oppositions et les mélanges de tonalités. Et d'autre part que la logique exige que l'enfant *ressente* les mouvements de la musique avant de les noter et que son appréciation se base ainsi sur des expériences personnelles.

En ce qui concerne l'enseignement de l'improvisation au piano, je conviens qu'il est impossible de donner du génie à des enfants qui n'ont que du talent, ni même du talent à ceux qui n'en possèdent pas naturellement. Mais une expérience de 25 ans de professorat me permet d'affirmer que des études spéciales sont en état de permettre à des élèves non anormaux de s'exprimer musicalement au piano d'une façon personnelle et d'improviser dans un style simple des accompagnements de lieds, des chorals et des danses — résultats que l'enseignement usuel des conservatoires ne cherche (que je sache) nullement à obtenir, et qui contribueront certainement à renforcer la musicalité générale du peuple. Développer le tempérament musical et les moyens individuels d'expression des enfants c'est étudier la "famille," élever le niveau artistique de la société et fournir demain aux artistes-nés des publics plus sensibles et plus intelligents. C'est ainsi favoriser le progrès artistique de la race.

Je vous serai très obligé de bien vouloir publier ces quelques mots de réponse ainsi que l'avant-propos de mes démonstrations de 24 et 25 janvier au Princes Theatre.

Veillez agréer, cher Monsieur, l'expression de mes sentiments les plus distingués,

E. J. DALCROZE.

The following is a translation of the above letter:—

To the Editor of "The Educational Times."

SIR,—I have read the article by your contributor, "Musicus," which deals with my method of eurhythmics. It is written in a style of cheap irony which I do not care to use in my reply, although I think it would be allowable towards an anonymous critic who does not appear to have read my textbooks, and who, in consequence, is speaking of things of which he has no real knowledge. If "Musicus" had thought of writing to me, or of taking advantage of my stay in London (announced a month ago), it would have been a pleasure to me to have explained the scope of my method, which covers not only the teaching of rhythmic movement (the physiological element in music), but also the thorough study of tone, chords, modulations, &c., as well as harmony at the piano. The whole method comprises several volumes. I should have told him, also, that I have never tried to combat existing methods of singing, nor to substitute my method for them. Moreover, no comparison can be made, since the aim of my teaching is the logical development of the hearing faculties and of metric and rhythmic feeling, which no other system of teaching music, so far as I know, embraces, otherwise than in theory. In writing my books I have simply tried to fill a gap, and musicians who have studied them seriously recognize that I have succeeded. It is to be hoped that other teachers of music will make similar experiments under the influence of my own conviction that it is not enough to teach children to sing and to play the piano, but that they should be given the power of listening to music, of appreciating the interrelation of melody and harmony, and of one key to another. On the other hand, logic demands that the child feel the movement of music before noting it, and that his appreciation should thus be based on individual experience.

As regards the teaching of improvisation at the piano, I agree that it is not possible to give genius to children who have only talent, nor even talent to those who have none naturally; but a teaching experience of twenty-five years enables me to state that special studies make it possible for pupils who are not below the normal to express themselves musically at the piano and in an individual way, and to improvise in a simple style the accompaniments to songs, chorales, and dances. These are results which the usual teaching in schools of music does not, so far as I know, try to obtain, and which will certainly help to strengthen the general musicality of the nation. Developing the musical temperament and individual powers of expression of children means bringing music into family life, raising the artistic level of society, providing for future artists more sensitive and intelligent audiences, thus helping the artistic progress of the race.

I shall be grateful if you will kindly publish this short reply, as well as my introductory remarks at the Demonstrations held on January 24 and 25 at the Prince's Theatre.

I am, &c., (Signed) E. J. DALCROZE.

[We regret that the report of the introductory remarks mentioned by M. Dalcroze is longer than our space allows. It may be obtained from the London School of Dalcroze Eurhythmics, Store Street, W.C.1.]

To the Editor of "The Educational Times."

SIR,—Probably many musicians will agree with "Musicus" when he questions "whether the bulk of the best music is in need of or is suited for" realization in terms of bodily movement.

If the claim of eurhythmicians in this regard is a just one, then the principle could be extended to poetry, in which rhythm is essential. We should then have poetry in plastics. But does any one want to realize a sonnet in terms of bodily movement? Music does more for eurhythmics than eurhythmics for music.

M. Dalcroze's system is so beautiful, it seems a pity to make a false or exaggerated claim for that which in itself is most excellent.

MARION CAHILL

## SUBJECTS AND METHODS.

### The Ghastly Failure of "History" Teaching.

HISTORY is the most important of all subjects of instruction, because it embraces human evolution, ethics, and citizenship. Our common-school arithmetic is an abomination of desolation, and our ordinary "history" teaching a ghastly failure. These two subjects are the worst taught of the curriculum in this country, and probably all over the civilized world, barbarian tribes being happily free from the bondage. With arithmetic I have here no special concern. No discussion of this nature can lead to an effective educational point unless one states the basis on which all the activities of school, college, or University should play their part. So let this be the fundamental proposition: *The aim of education should be service of family and commonwealth, based on industry, inspired by history, and perpetually related to the claims of the larger circle of humanity.* If you do not accept this basis, I must, for present purposes, leave you in the outer darkness; but kindly remember, as you retire to that outer circle, that neither religion nor citizenship has ever devised a better term for practical loyalty than service.

What is meant by the phrase "inspired by history"? A modern philosopher, Auguste Comte, has said that "history is the true guide of life," and illustrated the maxim by his admirable Calendar of Great Men, which is too little known by teachers. An ancient philosopher, of a very different type, expressed the same essential idea thus:—

Seeing we are compassed about with so great a cloud of witnesses, let us lay aside every weight, and the sin which doth so easily beset us, and let us run with patience the race that is set before us.

And, in this discussion, we may take it that the besetting sins are indifference to civic duties and to the social issues round which gather human admiration, hope, and love. As a matter of fact, our girls and boys get exceedingly little life-guidance out of their history lessons, and, instead of being inspired by a noble "cloud of witnesses," our young citizens are bored by a mob of skeleton names which rattle their bones through "manuals" and examination-papers. In such a rattling, note this:—

In 1646, Turenne invaded Bavaria, and, in 1647, the Elector signed with France the Treaty of Ulm. Though the French had failed in Spain before Lerida, and though the progress of the French armies in the Netherlands had been momentarily checked, the Imperialists had no chance of victory. In 1648, to punish the Elector of Bavaria for renouncing the Treaty of Ulm, Turenne overthrew him in May at the Battle of Zusmarshausen, and French troops occupied the Electorate. In July the capture of Tortosa . . .

And so on through a book crammed with such material. If the book were entitled a "Chronology," one would say nothing. It is called a "History." Even Freeman's "General Sketch of European History" ("meant for schools," says the preface), good as it is for a student's reference, has too much of the same awful rattle. For example:—

During the reign of Mahmoud the First, who reigned from 1730 to 1754, in a war which began in 1737, the Turks, by the Peace of Belgrade in 1739, recovered from Austria the city of Belgrade, and all that had been given up by the Peace of Passarowitz, . . .

In 1913 I walked into a Bombay high school where a history lesson was being given. Nothing in social evolution is more interesting than the story of India, or of the human relations of India and England. And the first thing I heard on entering a classroom where some very intelligent Hindu lads were being "taught" was this question by the teacher (I think a Parsee):

"In 1626, what demand did the Parliament make of Charles the First?"

And even now I have scarcely recovered from the shock this idiotic question gave me. Those young fellows had at least one justification if they afterwards swelled the "Indian unrest"! I do not blame the Parsee. I blame certain bureaucrats and certain conventions that have their home nearer London.

For devotion at a crisis England turns out citizens second to none in the world for spirit and resourcefulness. Witness the

recent War. But wars pass, and citizenship endures. Towards the construction of an ideal of citizenship in our globe-circling Commonwealth what do the ordinary history manuals and lessons contribute? Are our young people encouraged to believe that history lessons have any such use and purpose? Do they feel moved by history as, for instance, Mme Roland was moved by the brave tales in Plutarch's "Parallel Lives," or Alexander (who put a Homer papyrus under his pillow) by the scenes of the "Iliad"? And if not, why not? I can say for myself that I had passed through years of an elementary school, and gained a teacher's certificate, before it dawned on me that history ought to inspire, and that it might, if looked at rightly, disclose the glory of a Cloud of Witnesses.

Among all the nations, we British have had, and still have, the most multitudinous contacts, geographical and human, with varieties of colour, custom, language, and faith. We ought to be the premier people for enthusiastic interest in history, for history is the memory of peoples, and you can never truly understand any people till you acquire some adequate knowledge of the contents of their memory. F. J. GOULD.

### Modern Languages.

THE Education Committee of the London County Council held a conference on January 23 for the purpose of discussing the report of the Government Committee on Modern Languages. Sir Cyril Cobb, who presided, said that a knowledge of each other's languages was the best means of promoting a good understanding between peoples. The County Council had recognized this in a practical way by promoting the teaching of foreign languages in its own schools and institutes and by helping to found chairs at the London University, where they had two professorships of French, two of German, and one each of Italian and Russian. Mr. Stanley Leathes, Chairman of the Government Committee, said that the Committee's Report, however obvious its conclusions might seem, revealed the neglect of modern languages among us. It was necessary to give stimulus to this branch of study, and to convince people that in democratic countries a knowledge of languages was a national necessity as well as a profitable investment. This latter aspect was important, because it would lead the way to higher considerations, such as the value of modern languages as part of general education. No part of our national education—not even science teaching—had fallen so far below the standard of national and individual needs as had the teaching of modern languages. French was universally admitted to be necessary, and, in his opinion, German would also have to be studied so long as Germany took rank as an important nation.

Lord Crewe spoke of the value of the Report, and said that the aim of modern-language teaching should be to secure precision without pedantry. The impulse given to language studies during the War should be continued.

Sir Herbert Hambling, deputy Chairman of Barclay's Bank, urged the importance of modern languages in commercial life. He said that such knowledge would enable beginners in business to obtain lucrative posts. To this, Dr. R. M. Burrows, Principal of King's College, made the pertinent reply that in business life a knowledge of languages often meant that the linguist was kept to the narrow groove of foreign correspondence, receiving poor salaries and gaining no promotion. Our own experience of the ways of business houses confirms this, and makes us believe that it is a poor service to a boy to encourage him to study modern languages from a strictly commercial point of view, leading him to hope that he is thereby assuring for himself success and advancement in business life. Dr. Burrows quoted the case of a clerk who shrewdly concealed his knowledge of languages because he knew that by revealing it he would get into a blind-alley job and lose all chance of promotion.

This discussion illustrates the inherent fallacy of the demand that schools shall give vocational training. From the employer's point of view it is very convenient, but from that of the pupil it is very harmful. The case for more extended study of modern languages rests on the fact that everybody ought to have the opportunity of learning them, regardless of their particular work in life.

## CHRONICLE OF EDUCATION.

- 11 Jan.—Dr. Henry Bond elected Master of Trinity Hall, Cambridge.
- 17 Jan.—Issue of Board of Education Circulars on Grants for Elementary Education (Circular 1088).
- 18 Jan.—Issue of Board of Education Circulars on Avoidance of Broken Terms, Abolition of Fees in Elementary Schools, and Exercise of Powers under the Employment of Children Act.
- 18 Jan.—Dinner of American University men engaged in overseas service. Speeches by Mr. Fisher and Admiral Sims.
- 20 Jan.—Opening of Canadian Khaki College at Bramshot Camp.
- 29 Jan.—Imperial College of Science and Technology: Meeting of past and present students. Resolution passed in favour of obtaining a charter constituting the College an independent University of Technology, with power to grant its own degrees.
- 3 Feb.—Demonstration at Kingsway Hall in support of the formation of a Ministry of Health. Speech by Dr. Addison.
- 8 Feb.—Reception to Overseas Teachers.

### Announcements.

- 19 Feb.—British Psychological Society: Special General Meeting, 8 p.m., to discuss the reconstitution of the Society.
- 21 Feb.—Entertainment of thirty French Women Teachers at Hamilton House, Mabledon Place, by the National Union of Teachers and the London Teachers' Association.
- 21-22 Feb.—The Annual General Meeting of the Association of Technical Institutions will be held at the Clothworkers' Hall, Mincing Lane, London, E.C., on Friday and Saturday, 21 and 22 February.

The chair will be taken at 10.30 a.m. on the Friday by the President, Sir Alfred Keogh, G.C.B., LL.D., Rector of the Imperial College of Science and Technology, South Kensington. The President-elect is the Right Hon. Lord Sydenham of Combe, G.C.S.I., G.B.E., F.R.S., who will deliver his Presidential Address on the Friday morning.

Papers will be read on "Works Schools," by Prof. Eustice, of the Southampton University College; Mr. R. W. Ferguson, B.Sc., Educational Organizer, Messrs. Cadbury Bros., Ltd., Bournville; and Principal J. C. Maxwell Garnett, C.B.E., M.A., Manchester College of Technology. Principal H. Schofield, M.B.E., B.Sc., Loughborough Technical College, will read a paper on "Education in Relation to Industry."

## EMPIRE TEACHERS IN LONDON.

THE teacher-soldiers from the Dominions and Imperial Dependencies now visiting London, to study educational administration and practice, were entertained at the London Day Training College on Saturday evening, February 8, by the National Union of Teachers and the London Teachers' Association. The permanent cadre of the two organizations, to use a military expression, has attained a happy facility in arranging this kind of function. In other words, Mr. C. W. Crook (N.U.T.) and Mr. J. Lett (L.T.A.), with the official staffs, scored a distinct success. The guests arrived at 7.30, and "Auld Lang Syne" was sung, as timed, at 10 p.m., but the party refused to break up, and it was over an hour later before the last groups dispersed.

Official speeches of welcome, happy and short, were delivered by the two presidents. Colonel Lord Gorell, M.C., talked briefly and wittily of the British Army's scheme of education. Mr. Harry Gosling, L.C.C., one of Britain's really great and sane Labour leaders, spoke feelingly of Labour's interest in education. "We will help to lift up you, the teachers, and you must help to lift up us, the workers."

## PERSONAL NOTES.

### Prof. Muirhead of Birmingham.

A Muirhead Lectureship in Social Philosophy is to be founded at Birmingham University to mark the occasion of Prof. Muirhead's retirement from the Chair of Philosophy, which he has held for twenty-one years. During this time Prof. Muirhead has taken an active part in all civic movements for the improvement of social conditions in Birmingham, and has conducted in the University a very successful Department of Social Studies. The proposed Lectureship will be attached to this Department. Subscriptions may be sent to Sir William Ashley, The University, Edmund Street, Birmingham.

### A New Chief Inspector.

Mr. Herbert Ward, until recently the Divisional Inspector for North-west England, has been appointed Chief Inspector for the Training of Teachers. Before entering the service of the Board Mr. Ward served for a time as Senior House Tutor in the Borough Road Training College, under the late Prof. Withers.

### Mr. Spurley Hey.

At a recent meeting of the Manchester City Council it was decided to increase the salary of Mr. Spurley Hey, Director of Education, from £1,250 to £1,500, and that further advances of £100 a year should be given until the salary reached £2,000.

### New Head of Cheltenham.

Mr. Henry Harrison Hardy has been appointed by the Council of Cheltenham College to succeed Canon Waterfield, the present Principal, who is retiring at the end of the Summer Term, after twenty years' service. Mr. Hardy was born in 1882, and was educated at Rugby, where he was Head Boy in 1900. He went on to New College, Oxford, where he graduated in Lit. Hum. in 1905, returning afterwards to Rugby as an assistant master. He has served in the Army throughout the War, and is now acting as General Staff Officer for Education, Southern Command.

### Dr. Reginald R. Gates.

The Senate of London University have appointed Dr. Reginald R. Gates for three years as from January 1, 1919, to act as University Reader in Botany at King's College. Dr. Gates has been a Demonstrator in Botany at McGill University, Senior Fellow and Assistant in Botany at Chicago, Lecturer in Biology at St. Thomas's Hospital Medical School, and Associate Professor of Zoology in the University of California. He holds the Mendel and Huxley Gold Medal for research in biology.

### Director of Education for Derbyshire.

Mr. Percy George Feek, B.Sc., who has been Assistant Director of Education for Derbyshire for six years, has been appointed to the Directorship in succession to the late Mr. Jenkyn Brown, at a salary of £900 a year, with travelling expenses. Mr. Feek, who is a native of Worcestershire, has been in the service of the Committee for nearly fifteen years.

### Dr. George S. Corstorphine.

We regret to announce that Dr. George S. Corstorphine, B.Sc. Edin., Ph.D. Munich, Principal of the South African School of Mines, Johannesburg, died at Cape Town on January 25. Born in 1868, the eldest son of John Corstorphine, Edinburgh, he was educated at Edinburgh and Munich Universities. At the former he was Baxter Scholar in Natural Science, 1892, and held the Falconer Fellowship in Geology and Palaeontology from that year till 1895. He was assistant to Prof. Geikie, of the Chair of Geology in Edinburgh, before receiving his appointment as Professor of Geology and Mineralogy in the South African College, with which was joined the office of Keeper of the Geological Department, South African Museum, Cape Town. In 1913 he was made Principal of the South African School of Mines.

## EDUCATION ABROAD.

### The American Teacher.

IN a recent lecture, Dr. C. Russell Fish, Professor of American History in the University of Wisconsin, said that the American boy could hardly read the biography of any great American which did not record teaching as a part of his career. Nearly all their great lawyers, headed by Daniel Webster, had been teachers, and of their Presidents, four, including President Wilson. This was one result of the fact that in America it was the exception rather than the rule for children to follow in the footsteps of their parents, or for parents to attempt to direct the choice of their children, save in the most general way.

Teaching offered to the ambitious youth an opportunity of gaining a good education, and to a boy without connexions in the business world there was no other method so good for obtaining a footing in commerce. The school teacher, and particularly the school principal, was thrown into close connexion with business men, and few failed to receive tempting offers, especially in the lines of insurance, publishing, and banking. For a poor boy of ability, teaching was a main road to professional training and business success. Hence, very many boys planned to teach while but a few planned to become teachers. The schools gained an unusual proportion of the able youth of the country, but somewhat at the expense of the professional spirit.

In teaching, however, the problems concerned women far more than men. This state of things originated in the Civil War, when, as in the present war, women took upon themselves many tasks formerly considered to be in men's province. After that war women drifted out of some of these tasks, but they remained in teaching work, and the American schools are now largely staffed by women. It frequently happened that boys came up to Wisconsin University who had never had a man as a teacher, and he considered this to be as undesirable as that the girls should come up trained entirely by men.

Women teachers did not always remain in school work. Many women in the best positions in America, and particularly those who had the fullest lives, had been school teachers. Marriage and various forms of social activity drew them away from school. In his own State one-third of all the teachers dropped out and had to be replaced every year. To make a school staff with the help of young men looking to some other occupation and of pretty young women looking forward to matrimony was no easy task. An attempt to meet the difficulty had been made by requiring that all who undertook teaching work should have some kind of preparation. This lessened the evil of incompetency, but it involved a great waste of money to train so many people for an occupation which they would pursue for an average period of three years only.

Practically all the schools of America are co-educational, boys and girls being taught together in kindergarten, public school, and high school. Dr. Fish remarked that the results of this system in the last-named stage confirmed an observation of the American humorist, George Ade, to the effect that in the United States marriages are made, not in Heaven, but in the high schools.

### French Teachers and the War.

Statistics are published of the members of the French teaching profession who have given their lives for their country during the war. The numbers include 259 professors of literature, science, medicine, and law at Paris or the provincial Universities, 460 teachers or inspectors in the secondary schools (*lycées and collèges*), 5,500 schoolmasters and pupil teachers of the *écoles normales*, and eight professors of the great schools of higher education, such as the *Ecole Normale Supérieure* and the *Institut Catholique*.

### History in South African Schools.

IN a recent number of "History," Mr. Alan H. Hattersley has an interesting contribution on the teaching of history in South African schools. He says that conditions have prevented serious historical study. To many the past is associated with unpleasant recollections and the present is for all a time of difficult problems, calling for undivided attention. Material needs and commercial questions absorb energy, and one history teacher says that, owing to the economic and social conditions of life in a new country, the cultivation of non-productive studies is practically impossible for the majority. A further hindrance is found in the diversity of educational conditions. No central organization exists which has the power to impose any programme of studies on the Union as a whole. No society exists which is able to organize effort and obtain official weight for the views of the expert in history. No history scholarships to the University are awarded, and it is believed that anybody with a degree in Arts is qualified to teach the subject.

Given a supply of better equipped teachers, it is held that, even in the elementary school, history could be made to explain how society, in its political, economic, and social aspects, has slowly evolved; and also how it works at the present time. At least the ideas of continuity and change, the dependence of the present on the past, could be impressed, thereby helping the pupils to accept and use facts with some discrimination and giving them some measure of guidance in dealing with the problems of the country.

The method most favoured hitherto has been that of working through an elementary textbook, but in the higher forms the teachers deliver lectures while the pupils take notes. It is not usual to set work to be prepared privately, and, owing to the short time available for the subject, the teaching tends to be a mere stocking of the memory with facts. The concentric method has been favoured in selecting subjects and periods for study, and this Mr. Hattersley considers to have been a failure. Modern history from the Renaissance, with principal stress on Colonial and South African history, has been the field surveyed with increasing minuteness at successive stages. The use of sources is practically unknown, as most teachers declare that there is no time to go outside the textbook.

As might be expected, the teaching has been governed largely by the requirements of examination. Examples of questions are given, such as: "Give an outline of leading events during the reign of Henry VIII of England and Philip II of Spain" or "Describe the exploration of the New World during the sixteenth century, naming the chief settlements formed there between 1492 and 1608." It is rightly observed that such questions lead the teacher to cram the pupil with useless lists of names and dates. An example of a better type of questions is this: "Explain why the wars known as the Crusades were waged. Why were the European Powers unsuccessful? What were the principal results of these wars?"

Mr. Hattersley invited the opinion of teachers concerning the degree of spontaneous interest in history aroused in the pupils in higher forms. The replies are illuminating. One says that he doubts whether 5 per cent. of South African schoolboys acquire any permanent interest in any subject of the school course. Another says that enthusiasm is, as a rule, strictly limited to a desire to get through the matriculation examination. A third replies that few show any interest, "perhaps owing to the commercial atmosphere of Johannesburg."

It would be interesting to know whether teachers in England could affirm that we are ahead of South Africa, either in the methods or results of our teaching of history in school.

THE Gilchrist Trustees are offering a Studentship in Geography of the value of £80, tenable for one year. Applications should be sent to Prof. Lyde, University College, Gower Street, London, W.C.1, before March 1, 1919.

## SCHOOLS, COLLEGES, AND UNIVERSITIES.

### Oxford and the Training of Teachers.

The University of Oxford is taking preliminary steps towards uniting the Department for Training Secondary-school Teachers with the one for Elementary-school Teachers. Hitherto these institutions have been worked separately, although a very large number of those trained in the elementary-school section have, in fact, gone to work in secondary schools. The new policy of the Board of Education is to unify all forms of training in teaching, and we are glad to note that Oxford is falling into line. It will be necessary for the University and colleges to deal generously in this matter. It is quite useless to replace two institutions of little vitality by one run cheaply and in a shame-faced fashion. The truth is that the academic minds of Oxford, with a few admirable exceptions, have never taken the work of training teachers seriously. Their process of reasoning runs thus: "I am a good teacher. I was not trained. Therefore training is not necessary." Unfortunately, the manner in which training has been carried on in Oxford has given material for the sceptic. There is now an opportunity to establish a real department for the training of teachers, linking it up with the study of psychology and history.

### Imperial College of Science and Technology.

At an important meeting of past and present students of the Imperial College of Science and Technology, held on Wednesday, January 29th, in the Imperial College Union, South Kensington, it was decided, by a vote passed with only one dissentient, to petition the Governors of the College to raise its status to that of a University of Technology independent of the University of London, and competent to grant its own degrees. A number of influential speakers, including the President of the Institution of Mining and Metallurgy, supported the resolution.

### Leeds Secondary Schools.

The Leeds Education Committee have published an interesting return of the number of scholars who went from public elementary schools to secondary schools last year. About 8,400 boys and girls left the elementary schools during the school year which ended last July. Of these, 1,181 enrolled in secondary schools or day preparatory trade schools; 71.5 per cent. are not continuing their studies at either a secondary school, a day preparatory trades school, or a technical evening school under the Local Education Authority. "These figures," comments the writer of the report, "emphasize the necessity for fixing the appointed day for the operation of the clauses of the Education Act, 1918, raising the leaving age from the elementary school to fourteen, and making it obligatory that children on leaving these schools shall, if not proceeding to a secondary school or day preparatory trades school, continue their education at day continuation schools."

### A University for the East Midlands.

Recently a conference was held in Nottingham to discuss the project for developing the University College of that city as the centre for an East Midlands University, to serve the counties of Derby, Leicester, Lincoln, Northampton, Nottingham, and Rutland. Invitations had been sent to the Local Authorities of these counties and their principal towns. It was resolved that a statement should be drawn up as soon as possible, presenting the case for the establishment of a University. This will be submitted to the Board of Education in due course. Meanwhile many offers of support have been received from Local Authorities. At the conference it was suggested that an annual income of £60,000 should be secured, but several speakers said that this sum was too small. They were right, especially in view of the present value of money. It will be necessary to have an income of £100,000 at least, and, considering the area to be served, this amount should be raised without undue strain.

### Sheffield University and Australian Students.

Sheffield University is having to deal with an abnormal number of students this term, and among them are many who hail from Australia. Commenting on this, a contributor to the *Sheffield Daily Telegraph* writes: "The Australian Government, with wise forethought, has determined to demobilize the officers of its army in this country, and is suggesting to them the desirability, in order to save time in the interests of their own educational career, and, in view of transport difficulties, of completing their University education in this country. There is already evidence that large numbers of our Commonwealth cousins will comply with this suggestion, with consequences that cannot fail to be mutually advantageous. There is everything to be gained by fostering the ties that bind the Britisher and the young men of the great overseas Dominions, and in no way is this more likely of realization than by the formation of student friendships. The people of this country will thus get to know much more intimately the men who will in a few years be directing these great Dominions, and they on their part will return to their own homes with a better idea of the people of the Motherland."

### University of Bristol.

The scheme for extending the buildings is to be resumed as soon as possible. We note that there is to be a tower, with a belfry, and we look forward with interest to learning what possible use can be made of these adjuncts to a modern University.

### Private Schools in Bolton.

The Education Committee for Bolton has decided to take action in accordance with Section 8 of the Education Act, the clause which states that it shall be no defence to a prosecution under the Attendance Laws to prove that a child is attending a school unless the school is open to the inspection of the Local Education Authority or of the Board of Education, and unless satisfactory registers are kept of the attendances of pupils.

In Bolton each private school has been visited, and an official notification of the section has been served on the principal. In every case the Committee's officials have been courteously received, and satisfactory arrangements have been made regarding attendance records. The Local Authority states that it has no desire to interfere in any way with the independent working of the schools, but it is determined to see that the children are protected against negligence, especially as regards attendance.

### University of Manchester.

A number of friends of the University are forming a fund to provide scholarships for women students. It is hoped to raise at least £10,000 for this purpose.

### Gifts to St. Andrews University.

Sir John Herkless, Principal of the University of St. Andrews, told the University Court at its last meeting that Mr. James Younger, LL.D., with Mrs. Younger, had offered £30,000 for the building of a Quincentenary Memorial Hall, to be used for graduation ceremonies and other functions. He also reported that by the will of the late Mrs. Purdie, widow of a former Professor of Chemistry, the University would benefit to the extent of £25,000, the estimated value of the residue of Mrs. Purdie's estate. This bequest is to be used solely for the encouragement of research work in chemistry, as distinct from the ordinary courses. Thus used, it will supplement the work instituted by Prof. Purdie during his lifetime by a gift of £8,000.

These handsome additions to the resources of the University are added to still further by a gift of £2,500 from Mr. George Bonar, of Dundee, who stipulates that the money shall be used to provide teaching in commerce and that the Dundee Chamber of Commerce shall be accepted as the entrance test for a degree course in commerce. It need hardly be said that these gifts were accepted with cordial thanks. For our part we hope that they will be followed by many others on behalf of University education.

# SUPPLEMENT.

## SOME CONTINUATION SCHOOL PROBLEMS.

### The First Problem.

CONTINUATION schools on a compulsory basis are to be established, and for the first time the youth of England as a body will be brought under official supervision in regard to their physical, moral, and intellectual development. What are we to do with them when we have marshalled them into our schools under the sanction of police-court summonses and magistrates' sentences? Obviously we can lead or drive them to the fountains of knowledge. Can we make them drink? Our experience of indirect compulsion such as is now exerted by benevolent employers has never been fully set forth. Your benevolent person is prone to be satisfied with being benevolent, without inquiring too closely as to whether he is being beneficent. Certainly compulsion to attend evening schools was often bitterly resented, and the reluctant pupils took assiduous pains to learn as little as possible. The new day school will be regarded differently, one may hope, especially if the hours of attendance are wisely selected so that there is no ground for suspicion that the pupil is being robbed of "his own time."

Assuming that this obstacle to real success is overcome, we have still to discover how the pupil may be led to cooperate in his own physical, moral, and intellectual improvement. We must rid our minds completely of any belief that such improvement can be laid on the young man or woman as a kind of deposit from outside. A violent passion for improving other people leads to one of the worst forms of self-indulgence. It is a luxury which is cheap. Anybody in a bus can ask a fellow-passenger whether he has found salvation or can advise him to read Samuel Smiles instead of Nat Gould. More costly in money and effort, and therefore more rare, is the effort to make it possible for our fellows to find salvation or to prefer good literature to bad. Instead of cheap impertinent meddling and enforced instruction we need a spirit of true humanity and a clear vision of what education ought to mean for those to whom it is proffered.

### The Second Problem.

This leads directly to the second question which must be asked. Are the new continuation schools to be vocational in purpose or educative in the old sense, or are they to combine both ends? On reflection it will appear that the division suggested between the first two of these objects is not a real one. A training which gives a full preparation for earning a livelihood will not exclude education proper. Especially is this the case in these days of mechanical devices, when the proper supervision of a machine demands far more than a drudging watchfulness or manual dexterity. In modern industry the workers will demand more and more to be regarded as something better than mere adjuncts to machinery. They desire some share in management and direction, a greater voice in their own destinies, and an opportunity to develop that interest which comes from responsibility and mitigates the dullness of toil. It is clear that such aspirations must be met, and their realization can be best prepared for by humanizing our vocational training and "vocalizing" our humane studies. We must break down the barrier between subjects of utility and those of culture. This we can do best by making all instruction significant for the pupil. We wish to enlist his interest and secure his co-operation. We must therefore give to everything we teach a justification. Every subject must have a meaning and a value for him. Not, be it observed, for him as he was a few years ago or as he will be a few years hence, but as he is now, "in his habit as he lives."

### The Third Problem.

Hence we see that the third problem will be to adjust the schooling of all adolescents to their *present* circumstances and conditions. It is wrong to make a child's educational opportunity turn upon a preparation for what we conceive to be his future destiny. Our business is to give him the best possible education, to refine all his powers to the utmost, to give him practice in using those powers on his surroundings. In doing this we shall find ourselves constrained to provide differently for town and country children, for those working in factories and for those giving their whole time to study. So far as the mere names of subjects are concerned, much of the curriculum will be common to all types of youthful students, but the treatment of the subjects must be varied. English literature, for example, as taught to youths of fifteen in a town grammar school, should be very different from the English literature presented to a young farm labourer at his continuation school. The ingredients and food value will be the same, but the two dishes will be unlike in outward appearance.

We must carefully refrain from suggesting to the youth that he is re-traversing the experiences of his school days. Youth is proud of its emancipation and resents any attempt to put it back into the nursery. It was a cause of failure in many evening schools that the teachers merely repeated the lessons which they had already given to young pupils during the daytime.

### The Fourth Problem.

Education should be a link between men. Too often our "systems" of education have created and perpetuated social distinctions. Each grade of the community, if one could take a vertical cut through the different strata, would be found to have about the same proportion of talented people, fools, rogues, and degenerates. The present horizontal arrangement of society conceals this, and we ought to have another—still horizontal, but with more homogeneous layers, and the best at the top. As things are, the grades are divided by chance differences of fashion, mode of life, and customary thought. The time has now come for us to accept frankly the results of our efforts to foster national education. Those whom our artificial system has relegated to the lower grades are now finding that on the national system they would be more highly placed. They are demanding for themselves and their children those conditions which will give them a fuller and happier life. Their education, meagre though it has been, has at last shown them that there are ways of living which are far better than they have yet enjoyed. Any attempt to conduct the continuation schools on the assumption that the pupils are mere Gibeonites—hewers of wood and drawers of water for the rest of us—will meet with resolute opposition and will deservedly fail. Therefore we must carry on these schools in such a manner as will afford a ready means for discovering and developing latent ability. A rigid vocational plan will not serve this purpose, nor will any scheme which applies tests derived from the standards of secondary and higher schools as we have known them hitherto. We have to grasp the fact that a youth may be exceptionally gifted, although he knows nothing of Virgil and cannot deal with a quick-rising ball from the off. The lack of these graceful accomplishments should no more debar him from rising to eminence than the fact that he has never worn a blazer nor attended lectures in patent leather pumps. It is mere nonsense to say that his education must be conducted on any assumption that he is to be permanently excluded from the pump-wearing circles.

### The Fifth Problem.

This leads us to the broad statement that the new continuation schools must be first and foremost places of liberation for the human spirit. To ensure this we should regard them as social institutes where young people are taught the art of politics in the literal sense. Some of the best advertised of our devices for teaching adults are doing little more than train politicians, and our real need is more citizens. The spirit of our public schools at their best is made manifest in loyalty and corporate endeavour. Too often the loyalty and endeavour are confined to one class, chiefly because the homes and schools are attuned in their working to the note of one grade of society. If the spirit of our public schools can be enlarged in its outlook and extended to schools of every type we shall have an educational system which will give us the citizens we need. The duty of service must be emphasized, and the obligation to fit themselves for service should be put before all our young people as the true incentive to industry in school. They should not be led to think of duties as nothing more than a means of gaining money, or as a form of caste marking, or as a graceful accompaniment of a leisured life. Education is not justified by any one of these, taken singly. It includes them all.

## RURAL CONTINUATION SCHOOLS: SOME SUGGESTIONS.

By H. V. DAVIS, B.Sc.,

Lecturer in the County Training College, Crewe

THE establishment of rural continuation schools is probably the most difficult, as it is the most important, of the tasks suggested by the Education Act of 1918, but the difficulties are not too great to be overcome. In their report on the buildings which will be required, the Committee suggest that "the immediate erection of very large numbers of new buildings is not desirable," and that "it will be possible to utilize a great many existing buildings—particularly technical schools, disused elementary schools, and occupied elementary schools." But, where are we to find technical schools and disused elementary schools in our rural areas? (Certainly *occupied* elementary schools should not be used for continuation education.) If they are not to be found, and if it is not desirable to build new buildings, how shall we establish continuation schools?

We must take a broader and more far-sighted view than that of the Committee which hastily considered the matter and drew up its recommendations (in June 1918) under the stress of war. In our future educational system, continuation schools are to be a permanent feature. It would be well to make our plans accordingly. One of the things necessary is the provision of suitable buildings. These need not be of very substantial construction. In fact, it would be preferable for the early buildings to be of a temporary nature, for, as we gain experience in continuation education, we shall develop new views and requirements, and it would not be desirable to have our schemes fettered by buildings which we had outgrown but could not afford to discard. It is not our purpose here to discuss the most suitable type of building, nor its detailed planning and equipment. We are here concerned first with the personal units and corporate organism which constitute the school. Even at the risk of seeming to deal with trifles, it is better to consider the actual details of organization and routine, and so provide material for criticism and discussion.

We may note first of all that there is no real need for the rural continuation school to differ in its essentials from

the urban continuation school. That sharp division of our population into "town" and "country" people has not been good for the nation in the past. The regeneration of British agriculture and the increase of our small-holding population will tend to break down the wall of separation. Our ideal is to produce a country-bred adult who knows something of town life and a city-bred adult who is not altogether ignorant of rural life and labour. Hence, we might well ask ourselves why should not the country "young person" attend an urban continuation school and the city-bred "young person" go out to the country for his continued education? We may possibly begin to break the chains of tradition in such matters by letting the urban and rural continuation schools exchange scholars—*en bloc* or in groups—for a few weeks in each summer term.

But, doubtless, there will be established a type of continuation school that has a rural environment and local pupils. These schools should be built in or near villages and small towns so as to serve a region of from three to eight miles radius, according to the density of the population. County boundaries should be ignored in some cases, and pupils should be allowed to cross the boundary to a school that lies within easy reach. Such an arrangement is provided for in Section 3 of the Act.

The Act of 1918 provides many loopholes of escape from attendance at the regular continuation school—*e.g.* attendance at works' schools, &c.; but let us consider the organization and working of a typical rural continuation school such as the average young person will attend. For the training of our future citizens to be natural, to work together, and to vote together, we ought to run the schools on co-educational lines, though for some lessons and subjects the boys and girls will work separately.

Since each pupil will normally attend for only eight hours per week, the number of subjects in the curriculum must be very limited. The Act briefly groups them as subjects of study, instruction, and physical training. An invariable subject should be English language and literature, including the writing and speaking of English. The elder Sheridan laid it down that democracy would find its salvation through eloquence. Certainly the ability to speak clearly, fluently, and convincingly implies clear thinking and well ordered ideas. Thus by training our pupils in clear thinking and exact speaking, we should help to make them fit members of a democracy. It is in the subject of English literature that the continuation school can be of immense help to its pupils by directing their reading and showing them the treasures in the storehouse of literature, new as well as old.

In addition to English, some study of mathematics—especially of applied mathematics—and practical arithmetic should be undertaken. In fact, all the mathematical studies should have a direct bearing upon everyday life and work. Some science subjects should also be included, though the aim should be to give a scientific attitude of mind rather than detailed scientific facts. Other subjects of study and instruction should be the elements of economics, the foundations of government and of civics. The development of the industry in which the young person is engaged, or the history of some movement, or some well chosen biographies should be included.

The arts should be represented by vocal music, drawing, and artistic crafts. Physical training, with formal exercises, dancing, and swimming, should figure largely.

The greatest value of continuation education, especially under existing rural conditions, will be in the fuller social life that it will provide. It will relieve the boredom of rural life by bringing mental stimulus and varied human interests to the pupils. This can have its highest development if the schools are residential, and the authorities should consider the possibility of providing boarding schools, to be used by successive bodies of pupils, either during the winter months or throughout the year.

## THE JANUARY CONFERENCES.

(Continued from page 36.)

### New Ideals in Education.

The members of this body listened with great interest to an address by Miss Enright, now Principal of Messrs. Selfridge's Continuation School, and formerly head mistress of a higher-grade school in Rotherham, who described her efforts to train young people in the appreciation of good literature. She said that the basis of this work was the formation of a library, not for a class but for the whole school. The library was managed by the pupils, and books might be taken out on payment of a halfpenny a volume. Reading and teaching in class were used to form the basis for good books, and at an early stage the girls were encouraged to express themselves both in verse and in prose. Some examples of these exercises were read and much appreciated.

### University Women Teachers.

Miss Stephen, of Newnham College, presided over a meeting of the Association on Wednesday, January 8, when Miss May Smith, Lecturer on Psychology at Cherwell Hall, Oxford, spoke on some mental effects of loss of sleep. She said the problem of fatigue had not yet been properly investigated, but many children were believed to suffer from insufficient sleep during their school years. The measurement of fatigue was difficult. Some people believed themselves tired when they were merely bored. She described some tests on the power of voluntary attention and gave the results when these were applied experimentally to munition workers and others. The curious point was, that when the curve of fatigue had reached a very low level, another night without sleep restored the normal power, but this soon fell away again and afterwards normal power was regained very slowly. Fatigue was due to a poison, and this seemed to have at first a stimulating effect not unlike that of alcohol. Some persons seemed to develop an antidote to the poison and to be able to live long and healthy lives, although working very hard and sleeping very little. The work of fatigued persons, however, was usually very inferior and wasteful, and in certain responsible employments, such as that of signalmen on railways, it might be a danger to the community.

### Teachers of Domestic Subjects.

Mr. R. W. Weir addressed the Association of Domestic Subjects on Friday, January 10, and spoke of home planning, pointing out that it was urgently necessary to lessen the drudgery of the housekeeper by paying greater attention to the planning of the home and to its surroundings. He exhibited a number of slides showing the crowding of some town buildings and the gradual development of better cottages. He said he hoped to see local builders develop local styles and make use of local material, so that the buildings would harmonize with their surroundings. Mrs. Mills gave some practical counsel on house furnishing, deprecating the practice of unnecessary ornamentation and the use of dust-collecting articles and fabrics.

### Association of Public School Science Masters.

This Association held its annual Conference in the London Day Training College on December 30 and 31. During a discussion on the teaching of science in the general education of boys, Mr. W. D. Eggar, of Eton, advocated a two-years' course in science of four hours weekly for all boys in the middle part of the school. He described an experiment at Eton, where the younger boys were taught practical measurements by the mathematicians and nature study by the classical masters. This had been found successful; but a subsequent speaker, Mr. V. S. Bryant, Wellington, pointed out that it might be taken to prove that specialist science masters were no longer needed. The Conference passed a resolution urging that the science syllabus of the school-certificate examination in the Oxford and Cambridge Joint Board should be broadened by the inclusion of an alternative paper on general science. Some regret was expressed that in the school-certificate examination science had been made a compulsory subject, and it was agreed that this involved a widening of the syllabus. Mr. Hugh Richardson, Newcastle-on-Tyne, said that most of the statesmen who were now considering the problems of international settlement abroad and social betterment at home were of the pre-science period. The public schools of to-day should try to teach their pupils to approach the great human problems in a scientific spirit and with an impartial attitude of mind such as was almost absent from present-day politics. The Presidential address was delivered by Colonel Sir Ronald Ross, who said that the greatest gift of British education to the world was its emphasis on the importance of physical training. His experience in the Army had convinced him that a period of open-air training under discipline, combined with good food, resulted in greatly improved physique, health, and mental power, as well as in manners and *moral*. He suggested that a period of compulsory open-air training for the youth of both sexes ought to be imposed as a form of health conscription.

### Froebel Society.

Speaking at the Froebel Society on Thursday, January 9, Prof. James Shelley, the newly elected President, delivered an address on "The New Educational Realism." He said that the ideals of great masters in education such as Froebel had been limited by the conditions of the age in which they lived, and their teaching was accordingly in need of being brought into line in the modern life. The early stage of realistic teaching, which took the form of object lessons, was now giving place to the belief that things must not be shown in isolation but in connexion with those which influenced them. Education should view the child as an evolving member of an evolving community, and the schools should be so planned and their time-tables so arranged as to avoid the arbitrary and rigid elements. School subjects were often appropriate only to the later developments of human thought. The school, by isolating the intellect, diminished its value. Children should be engaged on tasks which had a practical value which they themselves recognized, for Bergson had pointed out that our knowledge of life was not merely intellectual, but largely intuitive.

# THE NEW DAWN IN METHOD.

"In almost every department of school teaching, recent years have seen the breaking of a new dawn in method; and in the case of Geography . . . the change has been . . . vital and fruitful. The earth has at length come to be regarded primarily and essentially as the Home of Man, and school geography is now becoming a study of environment. Its natural divisions are therefore not practical, physical, and physiographic, but political, historical, and economic; its aim is synthetic . . . the end being a picture, not a dissection.

"If this becomes the universal attitude to the subject in our schools, the result on the nation will be incalculable and beyond price. . . . For the teaching of geography as an Outlook—instead of an Inlook—will be a notable step towards the most democratic of all revolutions." *(From Prof. Lyde's Introduction.)*

SHOWS

## THE EARTH AS THE HOME OF MAN.

*Every section written by an expert.*

Amongst the specialist contributors are S. LEONARD BASTIN; ASHLEY G. BROWN, F.Z.S., Author of "British Columbia, its History, People, and Resources, &c.;" Professor GRENVILLE A. J. COLE, M.R.I.A., F.G.S., Professor in Geology, Royal College of Science for Ireland; JOHN DERRY, J.P., Author of "Across the Derbyshire Moors," &c.; ROBERT J. FINCH, F.R.G.S., Joint Author of "World Studies," &c.; ARTHUR R. HINKS, M.A., F.R.S., Secretary of the Royal Geographical Society, Author of "Map Projections," "Maps and Survey," &c.; ARTHUR HOLMES, D.I.C., A.R.C.S., B.Sc., P.G.S., of the Geology Department, Imperial College of Science, London; Sir HARRY H. JOHNSTON, G.C.M.G., K.C.B., D.Sc., Author of "A History of the British Empire in Africa," &c.; W. H. KOEBEL, Editor-in-Chief of "The Encyclopedia of South Africa," &c.; L. M. PARSONS, B.Sc., F.G.S., of the Imperial College of Science.

### TESTIMONY THAT COUNTS.

MISS BEALE, Brighton, writes:—

"A valuable aid to a teacher's work."

MR. B. HOWARD-HOOKS, B.A., A.C.P., writes:—

"It is a fascinating work and is proving of great use to us."

MR. C. F. BIRCHALL, Bentham, writes:—

"It is a capital production—'Scott's Expedition' being especially fine."

MR. B. MACGREGOR, Baling, London, W., writes:—

"Absorbingly interesting; the print is excellent and the pictures are an education in themselves. You have not exaggerated the excellence of this work."

MR. W. P. BRYAN, Municipal Technical Institute, Belfast, writes:—

"I am extremely pleased with the work."

SIR JAMES YOXALL writes:—

"THE WORLD WE LIVE IN' is certainly the most informative and interesting book of the kind I have seen. The text, the fine illustrations and the wonderful diagrams make it a printed university of geography and natural science, a teachers' aid and a reader's delight."

THE TIMES REVIEW:—

" . . . A comprehensive illustrated work which should have a wide appeal . . . the several chapters are the work of first-rate authorities who, though writing in a popular style, sacrifice nothing which is essential to the dignity of their narrative. The illustrations, mostly photographs, follow one another . . . with attractive variety. . . . Mr. Herbert Ponting's pictures, taken in the Antarctic, are particularly interesting; but the others are equally well-chosen and exemplify for the most part some striking geographical feature, ethnological trait, or industrial enterprise. . . . THE WORK IS TRUE TO ITS TITLE; it is a vivid presentation of man and his domicile under the most varying conditions."

## BLUE BOOK SUMMARY.

### Starting the Act.

The "appointed day" for putting the Education Act into operation is left to the discretion of the Board of Education, who "may appoint different days for different purposes, for different provisions of the Act, for different areas or parts of areas, and for different persons or classes of persons." It will be seen that the Board take very full powers, limited only by the provision that the parts of Section 8, which relate to raising the age of compulsory attendance to fourteen and to raising the age which may be fixed by by-laws to fifteen, were not to come into operation until the end of the war. Also, the duty of Local Authorities to establish certified schools for boarding and lodging physically defective and epileptic children will not be insisted upon for a period of seven years after the appointed day, except in the case of the London County Council. The compulsory attendance of young persons between the ages of sixteen and eighteen at continuation schools is also deferred for seven years after the appointed day. These periods of grace are manifestly designed to afford the Local Authorities an opportunity for making the necessary arrangements.

### The Present Position.

Happily, the Board have not lost time in fixing the appointed days. On August 8 of last year an Order was issued giving the date of the passing of the Act as the appointed day for putting into operation no fewer than twenty-five sections in full and parts of eight other sections. This Order was followed by others on September 27, November 1, November 27, and December 2, so that by the end of the year the chief part of the Act was in force. The former limit in county rates for higher education was abolished; attendance at central classes for elementary-school pupils was authorized, the employment of young children was checked; school camps and facilities for social and physical training were made possible; and medical inspection and treatment were extended to secondary and continuation schools. Nursery schools were authorized and also special facilities for children living under exceptional circumstances, for whom board and lodging away from home may be desirable. Maintenance allowances at public cost were permitted, and also home medical treatment for children and young persons. Voluntary inspection of non-State schools was offered free of cost, and land for new schools was brought under conditions of compulsory purchase. Power to aid research was given to Local Authorities, and these bodies were authorized to form Joint Councils or Federations. The Choice of Employment Act applies to young persons up to eighteen years of age. As from December 2 last it is no longer a defence to proceedings regarding attendance to prove that a child attends an efficient school unless the school is open to inspection and unless satisfactory registers are kept. This should be noted carefully by all concerned with private schools.

### New "Appointed Days."

As from February 1, 1919, a pupil in a public elementary school is deemed, for purposes connected with the Education Acts, to have reached any prescribed age at the end of the school term in which his birthday falls. This will give, as a rule, three "leaving days" in each year.

As from April 1, 1919, fees in public elementary schools are abolished and the Board will pay not less than one-half of the recognized net expenditure of a Local Education Authority on all forms of education, subject to deductions for default. From the same date the employment of young children out of school hours is restricted as provided by the Act.

These Orders are accompanied by Circulars giving the regulations which will govern their operation, and it is clear that no time is to be lost in putting the Act into force. The

changes to be made in the detailed working of schools are many and varied, but they all tend to greater ease and simplicity in carrying on our educational system.

### Pensions and Capitation Fees.

The Board of Education announce that, in calculating the average amount of salary of a head master or head mistress of a school for pension purposes, fees which are, in the opinion of the Board, capitation fees shall not be excluded.

### Juvenile Unemployment Centres.

The President of the Board of Education has appointed an Advisory Committee to assist the Board of Education in the development of their scheme for the establishment of Juvenile Unemployment Centres.

The following are the members of the Advisory Committee:—The Right Hon. J. Herbert Lewis, M.P. (Chairman); Lieut.-Col. Lord Henry Cavendish Bentinck, M.P.; Mr. F. Bramley; Mr. R. A. Bray; Mr. E. K. Chambers, C.B.; Sir Cyril Cobb, K.B.E., M.V.O.; Mr. R. C. Davison; Mr. H. Fleming; Mr. W. B. Hards, H.M.I.; Miss Agnes M. Hitchcock; Dr. R. W. Holland; the Rev. Canon T. Houghton; Miss T. M. Morton; Dr. A. H. Norris, M.C.; Miss Julia Varley; with Mr. G. W. Buckle (of the Board of Education) as Secretary.

### Teaching Certificates in Art.

The Board of Education have published the new Rules (109) as to the issue of teaching certificates for teachers in schools of art. The new requirements may be described briefly as follows:—

In art subjects, candidates must have passed the Board's examination in drawing, and either (a) the Board's examination in painting, or modelling, or pictorial design, or industrial design; or (b) the final examination of the Royal Institute of British Architects in architecture.

For the present the Board will accept, in lieu of a pass in drawing, the Art Class Teacher's Certificate, together with First Class successes in drawing from the antique and drawing from life, obtained in 1914 or previous years.

The candidate must be over nineteen years of age, and have furnished a satisfactory medical certificate.

He must also have passed the Board's preliminary examination for the Elementary School Teacher's Certificate or some other examination accepted by the Board in place thereof. The Matriculation examination or the Higher or Senior Local examinations are among the alternatives. Where the candidate has not passed an accepted examination, a certificate from the head master or the head mistress of a recognized secondary school will be accepted, and in cases where the candidate completed his general education before 1912, and the Board are of opinion that on account of his age an examination test of the kind indicated is not suitable, they will be prepared for the present to accept other evidence of sufficient general education, such as attendance at University Extension courses.

An important feature is that during his training the candidate must have completed to the satisfaction of the Board an approved course in the principles and practice of teaching at an institution recognized for the purpose. A list of recognized institutions is given which includes the Schools of Art in Birmingham, Bradford, Brighton, Chester, Leeds, Leicester, Manchester, and Newcastle. This course of approved training must be followed by an examination in the principles of teaching and school management, with special reference to the relations of art to industry and to the place of artistic subjects in systems of education. Candidates will be expected to reach a reasonable literary standard.

It will be noted that these proposals are directed towards bringing examinations of teachers of art into line with those for teachers of other subjects, and that they follow very closely the proposals of the Teachers Registration Council.

BOOKS FOR SECONDARY SCHOOLS AND THE OXFORD AND CAMBRIDGE LOCALS.

**Inorganic Chemistry,** both Practical and Theoretical, with Chemical Calculations and Graduated Questions. The best, latest, and cheapest textbook on the subject produced for the requirements of the University Locals. By S. W. BURNELL, LL.B., B.Sc., and A. J. DICKS, B.A., B.Sc. Crown 8vo, cloth, 379 pp. Price 4s. 6d. net.

**Elementary Science.** By J. H. NANCARROW, late Head Master of Kingston Public School of Science, and Lecturer at the Richmond School of Science. Crown 8vo, cloth, 354 pp. Price 4s. net.

Provides a thorough grounding in the elements of Physics, Mechanics, Heat, Light, Magnetism, Electricity, Chemistry, &c.

## Plant Study in School, Field, and Garden.

A textbook on Rural Science and Gardening. By J. S. BRIDGES, B.Sc., F.C.S., and A. J. DICKS, B.A., B.Sc., F.L.S., Head Master of Walthamstow County Secondary School. Crown 8vo, cloth, 432 pp. Price 4s. 6d. net.

This Botany textbook is of an experimental nature and free from difficult terms and Latinisms. Practical exercises and a summary appear at the end of each chapter. The book is profusely illustrated with over 600 original drawings.

## Concurrent Practical and Theoretical Geometry.

By W. J. POTTER, M.A. (Cantab.). Published in Three Parts. Part I, 2s. net; Part II, 2s. 6d. net; Part III, 3s. net. Detailed Prospectus post free on application. Answers to the numerical and graphical examples in Parts I to III. Price 1s. net.

**A Digest of British History.** By S. H. McGRADY, B.A. With an Introduction by OSCAR BROWNING. Crown 8vo, cloth, 320 pp. Price 3s. 6d. net.

A History note book on original lines, the great movements, trends and developments being logically traced, and their influences being clearly shown.

Also published in Three Parts as under:— Part I.—B.C. to 1485. Part II.—1485 to 1789. Part III.—1789 to 1912. Price 1s. 4d. net each.

## The Principles of Model and Common Object Drawing and The Shadow Treatment of Outline Drawing.

Being Book I of "A Complete Course of Blackboard Drawing." By E. A. BRANCH, Art Master Central Secondary School, West Ham. Royal 4to, 98 pp. (New edition now ready.) Price 4s. net.

This book explains those rules of perspective which apply alike to the special geometrical models familiar to the art student, and to the common objects which he sees outside the class-room, the rules which govern the representation of the cylinder in the art school, the kettle in the kitchen, and the band-stand in the park.

## Freehand for Teachers & Art Students.

By E. A. BRANCH, Art Master, Central Secondary School, West Ham. Royal 4to, 79 pp. New edition now ready. Price 3s. 6d. net.

Contains Thirty-two Photographic Representations, including Inlays, Patterns in Pottery, Textiles, Repousse, Wrought Iron, Carved Work, and Natural Foliage, together with One Hundred Diagrams of Construction.

## Milton's "Areopagitica."

Edited by C. W. CROOK, B.A., B.Sc. With Critical Introduction, full Text and Notes, Historical Appendix, Examination Questions, and Index to Notes. Crown 8vo, 152 pp. New edition now ready. Price 2s. net.

**Bacon's "New Atlantis."** With an Introduction and Notes by D. W. BEVAN. Crown 8vo, 68 pp. Interleaved. Price 1s. net.

## The Acts of the Apostles.

Edited by Rev. E. C. W. HANNAN, B.A. With Introduction, Notes, Glossary, Questions, Index, and a series of carefully graduated Examination Questions. Specially adapted for the Oxford and Cambridge Local Examinations. Crown 8vo, cloth, 168 pp. Price 2s. net.

HERBERT RUSSELL, 35 & 36 TEMPLE CHAMBERS, LONDON, E.C.4.

## ASSOCIATION NEWS.

### Teachers Registration Council.

Up to and including Monday, February 9, the total of applications for admission to the Register was 25,050. Recently there has been a marked increase in the number of applications. This may be ascribed to the Armistice and to the fact that many teachers are anxious to strengthen the Council's hands in the coming task of reconstruction. It should be understood that the Council's functions are by no means restricted to the keeping of the Official Register of Teachers. This is shown by a passage in the recently issued Report of the Machinery of Government Committee, which says that the Board of Education have had established the Teachers Registration Council, a body so composed under statute as to be representative of the teaching profession. The Report adds:—

In addition to performing its statutory duty of forming and keeping a Register of Teachers, the Council has had before it from the outset the larger and more general conception of the unification of the teaching profession; and the Board has given practical evidence of sympathy with this aspiration by inviting the Council at various times to consider and report to the Board upon several matters of importance.

It will be seen that the Council's claim to represent a united profession must rest upon the extent to which teachers as a body are seen to support its work.

### The College of Preceptors.

At the last meeting of the Council of the College, Miss M. Bennell, B.A., A.C.P., Mr. E. H. Butt, B.A., L.C.P., and the Rev. H. Martin Thorpe, M.A., were elected members of the Council; and the Rev. J. O. Bevan, Mrs. Felkin, and Mr. Millar Inglis were appointed delegates of the College to attend the Conference of the Imperial Union of Teachers.

The diploma of Associate was granted to Mr. Joseph Amesbury, who had satisfied the prescribed conditions.

A grant of £10 from the College Benevolent Fund was made to a life member of the College.

Resolutions relating to salaries, which had been adopted by the Assistant Masters' Association, were referred to the Educational Committee for consideration and report.

### Secondary Schools Association.

A deputation representing the Secondary Schools Association was received by the Right Hon. H. A. L. Fisher, M.P., President of the Board of Education, on Wednesday, January 29. The object of the deputation was to place before Mr. Fisher certain considerations concerning the alteration or withdrawal of Regulations Nos. 23 and 24 of the "Regulations for Secondary Schools."

The deputation, which was largely attended, was introduced by Sir Philip Magnus, Bart., M.P., and amongst those who addressed the President were the Very Rev. H. Wace (Dean of Canterbury), the Rev. Canon Driscoll (Cardinal Vaughan School), Miss E. M. Guinness (Vice-President of Ladies' College, Cheltenham), and the Very Rev. Wm. Moore Ede (Dean of Worcester).

Mr. Fisher received the deputation very sympathetically, and promised to give his careful consideration to their representations.

### Association of Teachers of Drawing in Day Schools.

An Association of Teachers of Drawing in Day Schools has been formed, under the Presidency of Miss Anstruther, of Goldsmiths' College, with the object of holding meetings about every three months, so as to keep members in close touch with the best and most modern methods of teaching the subject, and a meeting of the Association will be held at Goldsmiths' College, New Cross, on Tuesday, February 25, at 6.30 p.m.

### The British Scientific Instrument Research Association.

one of the earliest associations formed under the scheme of the Department of Scientific and Industrial Research, has secured premises at 26 Russell Square, W.C.1, where offices and research laboratories will be equipped. The first Chairman of the Association was Mr. A. S. Esslemont, whose recent lamented death has been a severe loss to the Association. The Council have elected Mr. H. A. Colefax, K.C., as Chairman to fill the vacancy. The Vice-chairman is Mr. Conrad Beck, C.B.E., to whose energy and personal influence is largely due the successful formation of the Association. Almost all the leading optical and scientific instrument manufacturers are members. The Department of Scientific and Industrial Research is represented by Major C. J. Stewart, Captain F. O. Creagh-Osborne, C.B., R.N., Mr. S. W. Morrison, O.B.E., Colonel R. E. Home, D.S.O., R.A., and Mr. Percy Ashley. The Council have recently co-opted as members of their body the Hon. Sir Charles A. Parsons, K.C.B., F.R.S., and Prof. J. W. Nicholson, M.A., D.Sc., F.R.S. Sir Herbert Jackson, K.B.E., F.R.S., F.I.C., has been appointed Director of Research and Mr. J. W. Williamson, B.Sc., Secretary of the Association.

### Proposed New Educational Journal.

On Friday, January 10, there was held in the Rooms of the Royal Society a conference of delegates from 21 associations connected with education. The meeting was arranged by Prof. Conway, of Manchester University, with the help of various learned bodies, for the purpose of discussing a proposal to establish a popular record of the progress of knowledge in all its branches. The main resolution was moved by Sir Frederic Kenyon, President of the British Academy, in the following terms:—"In the opinion of this Conference it would be in the national interest if a journal could be established which would represent the growth of the chief branches of knowledge in popular form." The details of this project were discussed broadly, but the Conference arrived at no practical conclusions beyond appointing a Committee to explore the question. The scheme as outlined presents many difficulties, but everyone will hope that these may be surmounted.

### University Women Teachers.

THE annual business meeting of the Association was held on January 25 at Bedford College for Women, Miss Stephen (the President) being in the chair. A very satisfactory report as to the position of the Association was submitted by the Treasurer, Miss K. H. Coward, who said that the membership and income had increased, in spite of the war. Miss Alice Woods and Miss M. H. Wood spoke on the importance of professional training for teachers, and a discussion was held on the probable effects of the Teachers' Superannuation Bill on private schools.

Resolutions were passed urging the need of a joint administration of education by teachers and employers, and the importance of full discussion of educational subjects. Satisfaction was expressed at the admission of women to the Parliamentary franchise. Mr. Homer Lane gave an address on "The Faults and Misdemeanours of Children." He said that a frequent mistake made in the nursery training of children was that of repressing their natural activities instead of directing them into right channels. To this he ascribed many of the difficulties and anti-social practices of later years, constituting faults from the adult point of view.

# PITMAN'S LIST

## of BOOKS for SECONDARY SCHOOLS

### BOOK-KEEPING.

**BOOK-KEEPING FOR BEGINNERS.** A first course in up-to-date Book-keeping. With Answers and Exercises. Cloth, 1s. 6d.

**IDEAL MS BOOKS FOR BOOK-KEEPING.** Each 6d.

**BOOK-KEEPING AND COMMERCIAL PRACTICE.** By H. H. SMITH, F.C.T. Cloth, 1s. 9d.

**COMPLETE BOOK-KEEPING.** A thoroughly comprehensive text-book. Cloth, 5s. net. Answers, 2s. 6d. net.

### LANGUAGES.

**THE PROGRESSIVE FRENCH GRAMMAR.** By Dr. F. A. HEDGCOCK, Officier de l'instruction publique; Officier d'Académie, and the only English Docteur ès lettres of the University of Paris.

The method adopted is a combination of the direct with the indirect, and, by means of phonetic type, a closely approximate idea of French pronunciation is conveyed. Crown 8vo, cloth, 326 pp., Part I, 3s. 6d. net; Part II, 2s. 6d. net. Key, 3s. 6d. net.

**FRENCH VOCABULARIES and IDIOMATIC PHRASES.** By E. J. KEALEY, B.A. Contains 3,000 Phrases. 2s. net.

**EXAMINATION NOTES ON FRENCH.** By F. W. M. DRAPER, M.A., B. ès L. Cloth, 1s. net.

**GERMAN, SPANISH, ITALIAN, PORTUGUESE.** Books on Grammar, Correspondence, &c.

### ENGLISH.

**ENGLISH FOR TECHNICAL STUDENTS.** By F. F. POTTER, M.A., B.Sc.

The object of this little book is to aid the student to gain a command of his mother tongue, and to express himself in the "plain language of educated people." Cloth, 2s. net.

**ENGLISH GRAMMAR AND COMPOSITION.** By W. J. WESTON, M.A., B.Sc.

The book is a manual of *Grammar taught through composition*. The writer's object has been not to gather together a set of rules and definitions, unattractive and uninspiring because divorced from practical use, but rather to examine the mechanism of the living English tongue, and to do this so as to arouse intelligent interest in the facts of language. Cloth, 3s. net.

### SCIENCE.

**MAGNETISM AND ELECTRICITY.** By J. R. ASHWORTH, D.Sc., F.Phys.S. An Introductory Course. Illustrated. 2s. 6d. net.

**HEAT, LIGHT, AND SOUND.** By the same author. An Introductory Course of Practical Exercises. Illustrated, 2s. 6d. net.

**GEOLOGY.** By A. S. JUKES-BROWNE, F.G.S. An Elementary Handbook. With 95 Illustrations. 3s. net.

**PICTORIAL ASTRONOMY.** By G. F. CHAMBERS, F.R.A.S. Interesting and Instructive. With 134 Illustrations. 4s. net.

**THE PLANT WORLD.** By G. MASSEE. An Introduction to the Study of Botany. With 56 Illustrations. 3s. net.

## LITERARY SECTION.

## BOOKS AND THE MAN.

## John Ruskin on Education.

ON February 8 one hundred years ago John Ruskin was born at Brunswick Square, the only child of a wealthy wine merchant of Puritanical tastes oddly at variance with his means of livelihood. Entering into the world with a silver wine cooler rather than a silver spoon in his mouth, Ruskin was free to admonish his contemporaries, and right well they deserved it. For us a special interest may be found in his ideas on education, which were not set forth in a single treatise, but crop up and recur throughout his writings, more especially in "Sesame and Lilies," "Fors Clavigera," and "A Joy for Ever."

In common with the great majority of people at all periods, Ruskin had a very poor opinion of the educational system of his own time. "Modern education," he declares, "for the most part signifies giving people the faculty of thinking wrong on every conceivable subject of importance to them." "Be assured," he says, "we cannot read. It is simply and sternly impossible for the English public, at this moment, to understand any thoughtful writing—so incapable of thought has it become in its insanity of avarice. As a nation we have been going on despising literature, despising science, despising art, despising Nature, despising compassion, and concentrating our soul on pence."

After enduring this tremendous indictment we are entitled to ask, with a chastened and humble air, what Ruskin would have. His reply is definite and dogmatic. First of all we are to recognize that everybody comes into the world with a fixed constitution and power. Education can do nothing more than develop these. "You can't manufacture man," he says, "any more than you can manufacture gold. You can find him and refine him; you dig him out as he is, nugget fashion, in the mountain stream; you bring him home, and you make him into current coin or household plate, but not one grain of him can you originally produce." This truism having been thus embroidered and enunciated, we may ask how the nuggets are to be assayed. The answer is found in a suggestion that in every important town there should be a School of Trial "in which those idle farmers' lads, whom their masters never can keep out of mischief, and those stupid tailors' apprentices who are always putting the sleeves in the wrong way upwards, may have a try at this other trade." Here is a new task for our continuation schools. Ruskin would have them so conducted as to discover "the mode in which the chance of advancement in life is to be extended to all, and yet made compatible with contentment in the pursuit of lower avocations by those whose abilities do not qualify them for the higher."

The object of education, according to Ruskin, should not be the low one of "pecuniary social advancement, which is the qualification of vanity." True education should be in itself an advancement in life. It should train to useful work. Knowledge alone, he tells us, does not educate. "A man is not educated because he can read Latin or write English, or can behave himself in a drawing-room; he is only educated if he is happy, busy, beneficent, and effective in the world."

Esthetic training he holds to be the first part of true education, to be gained by the influence of Nature, with her "heavenly realities, grass, water, beasts, flowers, and sky," all to be enjoyed in "the pleasant places which God made at once for the schoolroom and the playground of children." Emulation and competitive examinations are anathema to Ruskin. He would have schools made into places of preparation for a life of simple happiness, free from vulgar ambitions and full of the joy of honest work. His centenary is past, but his ideas are still far from being accomplished.

SILAS BURN.

## REVIEWS AND NOTICES.

## Education.

*America at School and at Work.* By H. B. Gray.  
(5s. net. Nisbet & Co.)

This book is a report of its author's investigations into American education during a six months' visit, following upon many previous visits. By right it ought to have been published by the Intelligence Department of the Board of Education, for it is just the sort of thing that we need in this country at the present moment. In all probability, however, it would have been impossible to write so freely as Dr. Gray has done had the book appeared under official auspices. For the work is not entirely expository and critical. It is distinctly constructive, and points the way to a radical change in our conceptions of the possibilities of national education. It is rather remarkable to find in an Oxford Doctor of Divinity such open-mindedness on industrial and commercial education. No doubt "Eclipse or Empire" prepared us to expect this freshness and vigour, but they are none the less welcome for that.

It is highly desirable that our educational people at home should keep in touch with the very rapid development of educational reform on the other side of the Atlantic. We are only awakening now to the existence and possibilities of the Gary system, and that system is already a seminal force in directing the practical working-out of American educational theory. Dr. Gray has done a notable service in bringing within our reach the very latest educational experiments over there. His report comes piping hot from the educational front, and would have appeared even earlier but for reasons over which he appears to have had no control. His main thesis is that we on this side have resolved the educational problem in a quarrel between the humanities and science, whereas in America progress is sought in a complete rearrangement of the relations between the school and the work-a-day world. His treatment of the co-operative movement is admirable, and well worthy the careful attention of our educational authorities. The "co-ordinator" is an official hitherto unknown among us, but his post is there all right. We have only to realize how needful he is, and in this realization Dr. Gray is helpful. The trade unions are busy just now, but in spite of that they must find time to produce a sufficient number of these new functionaries. The Corporation schools are not entirely unknown on this side, but Lord Leverhulme and his fellows should look into Chapters VIII and IX. We do not sufficiently realize that the vocational bureaux in America are gradually acquiring executive power, and are thus getting into a better position for utilizing the information and experience they have acquired since their foundation. Our Labour people have something to learn from these pages. We cannot follow Dr. Gray through all his chapters, but every one of them is worthy of the attention of one or other of the various groups of people concerned with education and social welfare. The book is peculiarly well suited to the needs of the moment, and to the English temperament at all times. Further, Dr. Gray has realized that this is the day of short books. Our busy folk will sit down to a book like this when they would shy at a tome. Once they have sat down they will keep their seat till they have finished. They will not agree with all the views expressed. We can fancy, indeed, some very vivid opposition coming from many of our able but orthodox educationists. Such a bracing tonic is exactly the thing they need. Why has the book no index?

J. A.

*Pedagomania.* By a Bachelor of Arts.  
(4s. 6d. net. Fisher Unwin.)

In the obliging description supplied by the publisher, this book is described as "a skit both diverting and erudite." With all respect to the publisher I must enter my protest. It is not erudite. This one could pardon if it were diverting. But is it? Honesty compels me to say that a good deal of it is dull. The author overreaches himself in his determination to be funny. I say this with very great regret, for I believe that there is not only room, but need, for humour in writing on education. So far from clamouring for erudition and banning humour, I am convinced that we have more than enough erudition and not nearly enough humour. What our Bachelor of Arts wants is a little restraint. He has many excellent ideas, and occasionally he succeeds in being genuinely amusing. Where he fails is in his intolerable exaggeration and in his working to death a feigned childish simplicity. Where he is strong is in his characterization of certain types of school-master. When he deigns to generalize intelligently he does not cease to be amusing. Many of the illustrations he uses bear traces of authenticity about them. The reader can learn something as well as derive genuine entertainment from pages 118-126. "The Staff Meeting" has many capital points. The contrast between the ancient and modern master is excellent. I hope the Bachelor will return to the charge. He has the root of the matter in him.

A.

*The Gary Schools: A General Account.* By A. Flexner and F. P. Bachman. (New York: General Education Board.)

This book gives significant evidence of the importance attached in America to the new scheme of educational organization commonly called the Gary system. It is only the first of a series of eight volumes dealing with the development of the scheme originated in July 1907 by President Wirt. It covers the whole ground in a general way, but leaves it to the succeeding volumes to elaborate the details. It thus forms a very useful book for the reader who is interested in the "duplicate" schools, but cannot afford the time to study a little library on the subject.

It is well to realize that the series is the work of a commission deliberately invited to make what the Americans are fond of calling a "survey" of the whole system, and the book has therefore official authority and a judicial attitude. America wants to find out exactly how much this new system is worth. The present two authors are men of great educational distinction: their opinion carries weight. Perhaps this is why they are so exceedingly careful not to commit themselves. They are almost unduly diffident. They are continually putting questions at large and proclaiming that they do not know the answer. "Is there any reason why children should not play in the early hours of the morning and do their classroom work in the early hours of the afternoon? . . . No one really knows." The Gary scheme, "as far as anyone knows," may be as effective as any other. "Accurate data bearing on the health and vigour of teachers working seven hours a day are not available." But in spite of this prevailing agnosticism, or perhaps because of it, the reader feels strongly impressed by the sincerity of the writers, and is predisposed to accept their decision as valid where they do commit themselves to a definite view.

The book has the admirable quality of beginning at the beginning, and tells us what and where Gary is, the sort of pupils who attend the schools, and what makes up the system. In a critical survey one might expect some reference to the rival "Ettinger plan," but may be the surveyors regard it as necessary to stick to the system under review and leave comparisons to their readers. To some extent our surveyors appear to have had popular criticisms in their mind when they compare the results of the Gary system with those of other American towns. Most people

know that the Gary methods have been described as "sloppy," and this seems to some extent to be borne out by the fact that the surveyors found the Gary children rather below the average in the ordinary school subjects, though considerably superior in physique, resource, and perhaps in initiative. There arises the inevitable question, "Does the easy working of the Gary machine result from the wholesome flexibility of the organization, or from sheer laxity?" On this point our authors are inclined to compromise, and they are no doubt right. We cannot follow them into some very interesting points of detail, though we should like to, especially on the question of allowing little children to be present in the classes of bigger ones to play the part of "helpers." It would be interesting to compare this situation with that involved in the monitorial and pupil-teacher systems. The conclusion to which the surveyors come is, on the whole, favourable to the Gary system, and they may rest content with having done a remarkably sound piece of work, not the least valuable part of which is the carefully prepared appendix. J. A.

*Learners as Leaders.* By Henry Spenser Wilkinson.  
(1s. 6d. net. Manchester University Press.)

This is a dainty reprint of an address delivered on April 26, 1918, at a memorial service for members of Manchester University who have fallen in the war. A difficult task accomplished with great skill and fine feeling.

*The Play Book.* By Ann Macbeth.  
(3s. 6d. net. Methuen.)

This book is intended for the use of teachers in charge of nursery schools and play centres. The authoress sets out with the purpose of enabling teachers to make school more attractive and exciting than anything they can find at home or in the streets—but she rather helps her rivals in the home circle by showing how invention in toy-making may be stimulated there. The attractive and wisely unelaborated drawings should tempt even the clumsy fingers of inexperienced lay men and women, to say nothing of the nimble fingers of expert teachers.

*The Doctrines of the Great Educators.* By R. R. Rusk.  
(5s. net. Macmillan.)

A distinctive feature of Dr. Rusk's book is that it can stand alone. It contains all the material necessary to form a first-hand estimate of the value of the contribution made to education by each of the dozen authors dealt with. The work is thoroughly documented, but the author is not content with mere references; he quotes with sufficient liberality to enable the student to feel that he is in direct touch with his authorities. Another point that gives the book individuality is the frequent references to experimental methods. This was to be expected from the author of *Experimental Education*, and greatly enhances the interest and value of the text. The reader is made to feel that he is in the hands of a writer who is particularly up to date, and who is himself taking quite his fair share in the progress which he expounds. The educators treated are: Plato, Quintilian, Elyot, Loyola, Comenius, Milton, Locke, Rousseau, Pestalozzi, Herbart, Froebel, Montessori. There is room for the usual haggling about inclusions and exclusions. One wants to know why Aristotle is omitted, another objects to Elyot taking a place that by rights belongs to Ascham, a third wonders what has become of Herbert Spencer. But Dr. Rusk knows exceedingly well what he is about, and trusts the intelligent reader to discover the underlying unity of conception that has determined the selection. While avoiding the procrustean rigidity of Monroe's classification, Dr. Rusk has so arranged his matter as to make of his book an organic whole, though now and again, as for example in the case of Loyola, one's ingenuity is taxed in the effort to fit in the material to the adumbrated scheme. All students of education will benefit by reading the book, and those who are preparing for examinations in this subject will find it invaluable. J. A.

(Continued on page 70.)

## HARRAP'S LATEST PUBLICATIONS.

AN IMPORTANT NEW BOOK.

### THE HISTORY OF ARYAN RULE IN INDIA

From the Earliest Times to the Death of Akbar. By E. B. HAVELL. With Photogravure Frontispiece. 32 Full-page Plates and Maps, &c., and Full Index. 620 pages. Gilt top, 15s. net. Also in Half Morocco, 30s. net.  
"An informing and illuminating work for which Students and Politicians should be profoundly grateful. Many illustrations of Indian Art and Architecture add to its value and interest."—*Yorkshire Post*.

### AN INTRODUCTION TO THE HISTORY OF SCIENCE

By Dr. WALTER LIBBY, M.A. With Eight Illustrations. Size, 7½ by 5 in. 304 pages, 5s. net.  
"Efficiently written, and free from excessive detail."—*Saturday Review*.

### HARRAP'S INTRODUCTORY ALGEBRA

By WILLIAM FARQUHARSON, M.A., Daniel Stewart's College, Edinburgh. Crown 8vo, 180 pages, with Answers, 2s. net. Also without Answers, 1s. 9d. net.

From the Principal of a Preparatory School:—"Farquharson's Algebra is first-rate, and I shall put an order through in due course. I hope the book will have the success it deserves, for of the large number of elementary Algebras I have perused in my search for something suitable for beginners, this is the only one that appears to have realized and provided for the extraordinary difficulty of the subject for small boys."

### ENGLISH EXTRACTS AND EXERCISES

For Comparative Study and Training in Composition. By F. H. PRITCHARD, Lecturer in Literature at the Municipal Technical School, Devonport. Large Crown 8vo, 256 pages, 2s. 6d. net.

An admirable practice-book in English for lower and middle forms in secondary schools, and for upper classes in primary schools. The main idea is to centre all the week's work in English round a suitable extract. The exercises are abundant and in many cases novel in character. No essential point in elementary English is left untouched, and wherever possible opportunity is taken to stimulate interest in the author or extract under consideration.

### THE SCIENTIFIC STUDY AND TEACHING OF LANGUAGES

By HAROLD E. PALMER, University College, London. Size 9 by 6 in., 328 pages, 10s. 6d. net.

This stimulating volume comes at an opportune moment, and the author's wide experience and practical suggestions deserve the attention of every teacher. *Prospectus on application*.

### BIOLOGY OF SEX

For Parents and Teachers. By T. W. GALLOWAY, Ph.D. Crown 8vo, 128 pages. Illustrated. New and Revised Edition, Cloth, 3s. 6d. net; sewed, 2s. 6d. net.

### HARRAP'S PRACTICAL RUSSIAN GRAMMAR

By R. T. CURRALL, M.A., George Watson's College, Edinburgh. With Phonetic Transcripts, Exercises in the Russian Handwritings, and Vocabulary. 272 pages. Crown 8vo, 6s. net.

### A RUSSIAN PRONOUNCING VOCABULARY

With an Introduction on Russian Pronunciation. By R. T. CURRALL, M.A., George Watson's College. Size 5½ by 3 in., 128 pages, limp cloth, 1s. net.

This book contains classified lists of more than 2,000 Russian words, with phonetic pronunciation of each and its English equivalent.

### OLD FRENCH NURSERY SONGS

Arranged and illustrated by ANNE ANDERSON. Accompaniment printed boldly for use at the Piano. With Eight Colour Plates and many Line Drawings and Decorations. Size 11½ by 8½ in., 7s. 6d. net.

This collection comprises some thirty charming French Songs. Extract from *Music*:—"The melodies are simple and beautiful in true French manner, the pictures are dainty both as to drawing and colour."

### A FIRST SPANISH COURSE

By Profs. E. C. HILLS and J. D. M. FORD. With Exercises and Vocabulary. Crown 8vo, 340 pages, 4s. 6d. net. Key, for Teachers only, 5s. 3d. net. This easier course is designed for much younger pupils than the Authors' previous work.

"A prominent feature is the RESUMEN GRAMMATICAL in Spanish at the end of each lesson."—*The Journal of Education*.

### LIBRO DE LECTURA PARA PRINCIPIANTES

Edited by E. MAURER, Reading School. With Vocabulary and Exercises. Small Crown 8vo, limp, 160 pages, 2s. net.

### LA VIDA DE VASCO NUÑEZ DE BALBOA

By M. J. QUINTANA. Edited with Introduction, Notes, and Vocabulary, by A. E. WOLFF, D.Lit. Small Crown 8vo, 116 pages, 1s. 6d. net.

A "one term" Reader, the Text amounting to 64 pages.

### CAPÍTULOS ESCOGIDOS DE V. BLASCO IBÁÑEZ

With Notes and full Vocabulary by ALEC E. WOLFF, M.A. Crown 8vo, 192 pages, 2s. net.

Selections—each one complete in itself—from the works of the foremost novelist of the present day, whose works have been translated into every European language.

N.B.—New Descriptive Lists of Books in French and Spanish will be sent on application.

London: GEORGE G. HARRAP & CO., LTD.

Directors: GEORGE G. HARRAP, G. OLIVER ANDERSON.

2 & 3 Portsmouth St., Kingsway, London, W.C. 2

## OUTSTANDING BOOKS FOR THE STUDY OF ENGLISH.

### PICTURE COMPOSITION.

Teaching of English through Pictures.

By LEWIS MARSH, M.A., Head Master of Ealing County School. In Three Books, each containing 16 full-page beautifully coloured Pictures and many other Illustrations. Cloth covers, 9d. each.

### PREPARATORY COURSE OF LITERARY READING AND COMPOSITION.

Edited by LEWIS MARSH, M.A. Illustrated from Famous Paintings. 2s.

### SENIOR COURSE OF LITERARY READING AND COMPOSITION.

Illustrated from Famous Paintings. Edited by LEWIS MARSH, M.A. 2s. 6d.

### WORDS: THEIR ORIGIN AND USE.

A Correlated Scheme of Spelling, Derivation, Reading, Dictation, and Composition. By F. W. CHAMBERS and A. J. KER, Northfield Boys' School, West Ealing, London. In two Books, each with a companion Teachers' Book, 10d. each. TEACHERS' BOOKS, containing the Scholars' Books and 40 additional pages of Notes. 1s. 6d. net.

### POETICA: A Book of English Verse for Repetition.

Chosen and arranged by JOHN RIDGES, M.A. (Cantab.), sometime Head Master of Leighton Park School, Reading. Illustrated with Portraits. Divided into three Parts for the three school years ending at 15 or 16. Daintily bound in art linen, 2s. 6d. net. Also issued in four Parts, cloth covers, 10d. net each.

### THE CALL OF THE HOMELAND.

A collection of English Verse. Selected and arranged by R. P. SCOTT, LL.D., and KATHERINE T. WALLAS, M.A. In two Volumes. 2s. 6d. net each.

Book I. Echoes from History—Britain Overseas—The Sea—The Changing Year.

Book II. The English Countryside—Home—Exile—Compatriots—The Call to Serve—The Call to Happiness.

### ENGLISH POETRY FOR THE YOUNG.

Compiled and edited by S. E. WINBOLT, M.A., Christ's Hospital, 1s. 6d.

### BLACKIE'S ENGLISH TEXTS.

Edited by W. H. D. ROUSE, Litt.D., Head Master of the Perse School, Cambridge. A wealth of material for the literary study of English. Each book has a brief introduction dealing with the author's life and place in literature, but no notes. Over a hundred volumes are now in the series, offering a wide field for selection in General Literature, Travel and History.

### BLACKIE'S SMALLER ENGLISH CLASSICS.

Selections from Standard Authors. Edited by Competent Scholars, with Biographical Sketch and Explanatory Notes. Each, paper, 3d.; limp cloth, 5d.

### THE JUNIOR SCHOOL SHAKESPEARE.

A series of the greater Plays, edited, with Introduction, Notes, &c., by Experienced Scholars, for Junior Students and Junior Candidates in the University Local Examinations. The Plays are edited chiefly from the literary standpoint, although philological notes, where such are required, are given. Clearly printed and neatly bound in limp cloth covers. With Coloured Frontispiece. Price 10d. each.

### THE PLAIN-TEXT SHAKESPEARE.

A neat edition of the greater plays of Shakespeare, presented in a serviceable form at a cheap price. The text follows the well-known Junior School Shakespeare, which omits everything that might be thought undesirable in class reading. Cloth covers, price 7d. each.

### THE PLAIN-TEXT POETS.

With Introductions by teachers of experience and position, but no further notes are given. With Frontispiece, neatly bound in cloth covers, limp, 10d. each.

**BLACKIE & SON, LTD.,**  
50 OLD BAILEY, LONDON, E.O.4.  
GLASGOW AND BOMBAY.

**History.**

*Outlines of European History.* By Prof. A. J. Grant.  
(5s. net. Longmans.)

The new edition of Prof. Grant's broad survey comes to us in a limp cover with some new and valuable features, the chief of which are that the history of England and Great Britain is included and the record is brought down almost to the date of the Armistice following the European War. The story is throughout told with great skill, and the canvas is duly economized so that the various parts of the selected picture are thrown into proper perspective. The picture itself is not wholly to our liking, for we cannot be content with a survey of political conditions which dismisses the Chartist movement in two lines. It may be said that space was limited, but we note that portraits of such familiar features as those of Disraeli, Gladstone, and Nelson occupy from one-third to one-half a page each, while a wholly useless picture of the Kremlin at Moscow fills nearly an entire page.

R.

"Historical Series for Schools."—*Book III: An Advanced History of Great Britain from the Earliest Times to 1918* (New Edition). With sixty-three maps and plans. By T. F. Tout. (7s. 6d. Longmans.)

"Mary was liable to be turned from her purpose by gusts of passion to which the colder nature of Elizabeth was almost a stranger." This sentence is not a palpitating morsel from a Brontë novel, but occurs in Prof. Tout's chapter on Elizabeth and Mary Queen of Scots. His revelation of queenly hearts may be quite truthful. But this statement belongs to a class of abrupt and cursory judgments so numerous in his book that one rather doubts if the adolescent reader gets much solid instruction from them. The ingenious young person hears that, in Wales, the Methodist movement "fell ultimately almost entirely under Calvinistic auspices." He hears that the imitations of medieval fabrics which the Gothic revival prompted "became more artistic, learned, and appropriate" as the Tractarian movement progressed. And he hears that Rossetti was "as consummate a poet as he was unique as a painter." He will, no doubt, reproduce such phrases quite accurately in his examination papers, but if one could lay bare his brain process and discover what valid ideas he associates with them, the results might be, as reviewers say, "stimulating and suggestive." And, while we are engaged in making ill-natured remarks, we may also inquire why Prof. Tout should piously record the ages of monarchs?—as, for example, "Elizabeth was just five-and-twenty"; "George, Elector of Hanover, was more than fifty"; "George V was forty-five years old," &c. It is all, of course, a question of proportion. When the author truly says, "Bunyan's were the first great books in modern English literature written by a man of the people," some readers think ample justice is done, while others regard Bunyan's genius as infinitely more important than the Elector of Hanover's age. Some will deem four lines dedicated to the rise of the Parliamentary Labour Party in 1906 quite ample record, and others will say its social significance is inadequately appreciated.

Let all this be as it may. It is probable that the average school teacher's sense of proportion practically coincides with Prof. Tout's in what Liebnitz would call a pre-established harmony. Judged by this pleasant standard, the manual is an excellent and businesslike compendium, full of items methodically arranged, neatly divided into periods, and compactly embracing the whole story of British evolution from Palæolithic Man and the voyage of Pytheas to the Education Act of "Herbert Fisher, a University teacher, who was made Minister of Education on the novel ground of his acquaintance with the subject." In spite of the enormous amount of information packed into the volume, one cannot say the style is dry. This new edition adds a clear and readable account of the War of 1914-18, down to the Armistice.

F. J. G.

**Chemistry.**

*Catalysis in Industrial Chemistry.* By G. G. Henderson.  
(9s. net. Longmans.)

Not so very long ago catalytic actions were considered to occur in only a few cases, but the physico-chemical investigation of chemical reactions, which has proceeded continuously in recent years, indicates that catalysis is likely to be the rule rather than the exception. Since the action of a catalyst is to speed up very considerably the rate at which a chemical reaction takes place, it follows that catalysis is of prime importance from an industrial point of view. That this importance is realized is evidenced by the fact that chemical patent literature during the last decade or so has contained numerous applications of catalysis. It may be safely said that Germany could not have carried on the war as long as she did had not her scientific and industrial chemists previously worked out catalytic methods for making such products as oleum, ammonia, and nitric acid from materials ready at hand instead of from substances she previously imported. During the war England has had to solve many of these problems afresh, and to a great extent she owes her success in the manufacture of chemical munitions of war to the complete way in which she has effected the solution of such problems.

Prof. Henderson is to be congratulated on the way in which he has collated the scattered information on catalysis. An instructive and eminently readable account is given of the various reactions which occur and can be utilized in both inorganic and organic industrial chemistry. No reactions and processes of importance seem to have been omitted, and especially valuable are the chapters dealing with hydrogenation, dehydrogenation, hydration, dehydration, polymerization, and condensation in organic chemistry. Inorganic processes occupy roughly one-third of the book, and when one considers that such fundamentally important substances as sulphuric acid, ammonia, and nitric acid are there dealt with, the amount of space allotted to them would seem at first sight to be rather small. However, the technical details in connexion with the manufacture of the substances have hitherto been largely "works secrets" in Germany, and the results obtained by the Ministry of Munitions in England are apparently not yet available to the public. The author is also subjected to the limitation that technical *minutiae* of manufacture must not be given, except in so far as these may be necessary to elucidate some point of principle.

As lies in the nature of the case, the theoretical and more purely scientific investigation of catalysis has lagged far behind the actual practical applications, and one value of such a book as the present one is that therein may be found many and varied problems for research.

The book is one which can be heartily recommended, filling, as it does, a gap in chemical literature: it is singularly free from misprints. One wonders, however, when a limit of price will be reached, since the bottom of a student's pocket especially will soon be reached if many such books have to be bought.

T. S. P.

**General.**

*Tommy Smith Again at the Zoo.* By Edmund Selous.  
(Methuen.)

In this little volume we have a record of Tommy Smith's conversations with such animals as the Polar bear, the Great Bird of Paradise, the hippopotamus, and the sea lion—all very entertaining and informing. As our youngest reviewer (aged nine) puts it: "It is a good book for a reading book, because many books which are intended as reading books for children do not interest them or teach them anything except how to read."

*Queer Beasts and Magics.* By Mrs. Arthur H. D. Acland.  
(3s. 6d. net. Sidgwick & Jackson.)

Mrs. Acland has contrived a very amusing tale of the adventures of John Lang in a country house which is visited by strange animals. A trial has shown that the episodes are much enjoyed by little children.

# THE SCIENCE OF HEALTH

Books by Dr. Valentine Knaggs.

**BASIC DIAGNOSIS & Reconstructive Treatment:** A Threefold Classification of Disease and an Indication of the Appropriate and Natural Methods for the Renewal of Health. Includes 4 pp. charts, 6 line drawings, 7 half-tone illustrations, and 4 radiographs. **6s.** net (postage 4d.).

**INDIGESTION: Its Cause and Cure.** 3rd Edition (illustrated). **2s. 6d.** net (postage 3d.). In this book you can learn all about the varying causes and symptoms, and the dietetic and hygienic treatment of the conditions of ill-health arising from faulty digestive conditions. It has helped thousands.

**The HEALTHY LIFE BEVERAGE BOOK.** A Text Book arranged alphabetically. 2nd Edition, greatly enlarged. **3s. 6d.** net (postage 3d.). Makes known the vast array of cleansing, tonic, curative, and nutritive beverages which can be prepared in the home from natural products.

**THREEPENNY BOOKLETS.**

Each 3d.; postage 1/4d.; 5, post free, for 1s. 4d.

**Why Our Teeth Decay.**

**Noises in the Head and Ear Trouble.**

**The Spine in Relation to Health**  
(with Simple Exercises).

**The Salad Road to Health.**

**A Common Stomach Trouble**  
(Dilated Stomach).

**LONDON: C. W. DANIEL, LTD.**

**The NATURAL FOOD of MAN.** By HERWARD CARRINGTON (Member of the Council of the American Institute for Scientific Research). Cloth **10s. 6d.** net (postage 6d.). The argument is taken through comparative anatomy, physiology, chemistry, hygiene, and experience. An invaluable reference work for all speakers and teachers, and makes its appeal to all serious thinkers.

"An encyclopædia of facts and arguments."

**An INTRODUCTION to NATURE CURE.** By JAMES C. THOMSON. Cloth **3s. 6d.** net (postage 4d.). Everyone who wishes to understand the real meaning and possibilities of "Nature Cure" will find this concisely written book full of enlightenment. The author is a Nature Cure physician of many years' experience, and speaks with authority on Water Treatment, Osteopathy, Diagnosis from the Iris, &c., &c.

**WHAT TO EAT AND HOW MUCH.** By FLORENCE DANIEL. Paper, **1s. 2d.**; Cloth, **2s. 2d.** (postage 2d.). A setting out of the main points of these much-debated subjects in such a way as to help the reader to come to reasonable conclusions.

**SOME POPULAR FOOD STUFFS EXPOSED.** By Dr. PAUL CARTON. **2s.** net (postage 3d.). A convincing indictment which every one at all concerned in stemming the tide of physical degeneration should read.

**THE HEALTHY LIFE.**

Monthly 6d.; postage 1d. Yearly, post free, 6s.

The Healthy Life is England's

**NATURE CURE MAGAZINE.**

**3 Tudor Street, E.C.4.**

By Special Appointment.

To their Majesties the King and Queen and H.M. Queen Alexandra

## WINSOR & NEWTON, Prepared Water Colours,

IN

WHOLE and HALF CAKES, WHOLE, HALF, and  
QUARTER PANS,  
and WHOLE, HALF, and LARGE TUBES.

**QUARTER PANS** of Winsor and Newton's Artists' Water Colours are of the same outside dimensions as the Half Pans. They may, therefore, be used in Winsor and Newton's range of Half Pan Japanned Boxes.

The advantages of habituating the Student at the outset of his career to the use of the BEST materials are so obvious that no attention need be drawn to them.

Messrs. Winsor and Newton's Artists' Water Colours are necessarily more expensive than those usually manufactured for School use, but as, owing to their superior strength, a small quantity yields approximately the same amount of colour surface as the larger pans of Water Colours generally sold for Students' use, the expense in both cases is much the same.

The special attention of Teachers and the public is, therefore, invited to these Quarter Pans of Colour, which, costing practically the same, provide the Student with a superior article.

Full detailed catalogue may be obtained from any of the leading Artists' Colourmen throughout the Country, or from 39 Rathbone Place, London, W.1. Established nearly a Century.

## TUITION BY POST.

Practical Training in

### SHORTHAND,

BOOK-KEEPING AND ACCOUNTANCY,

COMMERCIAL PRACTICE, BANKING,

ADVERTISING, COMMERCIAL LAW.

Pitman's Postal Courses are admirably adapted for teachers who are unable to take advantage of the ordinary facilities for receiving oral instruction, but desire to qualify in commercial subjects. Each lesson is a full exposition of that part of the subject covered. One course, or any group, may be commenced at any time, and from any stage of present knowledge.

Write for details, stating the subjects in which you are interested.

The Gary Schools. A General Account. By Abraham Flexner and Frank C. Bachman.

## PUBLISHERS' ANNOUNCEMENTS.

THE Cambridge University Press announces two volumes to be added immediately to the "Cambridge Modern French Series": (1) Selections from Jusserand's "La Vie Nomade et les Routes d'Angleterre au XI<sup>e</sup> Siècle," edited by Mr. A. Wilson-Green, the general editor of the series; (2) Balzac's "Le Colonel Chabert," edited by Mr. S. H. Moore. These will shortly be followed by a volume of much topical interest, containing selections from French descriptions of war incidents—e.g. Marcel Nadaud's "Le Pirate," Gaston Riou's "Le Jour des Morts 1914," Canudo's "Salonique," Emile Henriot's "Le Grand Terrain," &c. The book will be edited by Mr. Wilson-Green.

Messrs. Longmans, Green, & Co. have published the earlier volumes of an important series of Monographs on Industrial Chemistry, edited by Sir Edward Thorpe.

The Waverley Book Company, of the Old Bailey, London, E.C.4, is issuing on the instalment plan a publication entitled "The World We Live In." These volumes contain useful material for the preparation of lessons in geography, following closely the lines of the "Revised Suggestions" recently issued by the Board of Education, particularly with regard to the correlation of geography and history. Apart from their technical value, the books are interesting in themselves. A descriptive pamphlet may be obtained from the publishers, and we recommend our readers to apply for this without delay.

# ASSISTANT MISTRESSES ASSISTANT MASTERS LADY MATRONS and HOUSEKEEPERS

seeking appointments in Public or Private Schools are invited to communicate with Truman & Knightley, Ltd., whose close and intimate relations with the leading schools place them in a unique position to find candidates suitable for openings in all branches of the teaching profession.

A special feature of this agency is the personal attention it gives in endeavouring to secure appointments suited to the applicant.

The number of vacancies is now too large to permit of a satisfactory selection being inserted, and applicants are therefore invited to state their requirements fully, assured that they will, if desired, be treated in strictest confidence.

There is no registration fee and the commission charged to those for whom an appointment is secured is very moderate.

LADIES AND GENTLEMEN SEEKING PARTNERSHIPS IN OR TO TAKE OVER SCHOOLS OF THEIR OWN SHOULD COMMUNICATE PERSONALLY WITH MR. TRUMAN, WHO UNDERTAKES ALL NEGOTIATIONS CONNECTED WITH THE TRANSFER OF SCHOOLS AND IS IN A POSITION TO OFFER ASSISTANCE AND SOUND ADVICE TO PURCHASERS, TO WHOM NO CHARGE IS MADE. INTERVIEWS WILL BE ARRANGED BY APPOINTMENT.

**"AN IDEAL HISTORY BOOK."**

Each chapter treats of such subjects as General Social Conditions, Costumes, Buildings, Modes of Life, Food, Travel, Fairs and Markets, Games, and Industrial Occupations.

**A HISTORY OF  
EVERYDAY THINGS  
IN ENGLAND**

Done in Two Parts, of which this is the first (1066-1499).

Written and Illustrated by

**MARJORIE and C. H. B. QUENNEL.**

Containing 200 pages, including 86 Illustrations specially drawn by the Authors and reproduced in line and half-tone, also 5 Colour Plates showing the development of Costume.

Price 8/6 net. Postage 6d. extra.

The 2nd impression of this remarkable book is now ready.  
The demand for it continues to be phenomenal and early application should be made by those desiring to secure copies.

THE TIMES, dated September 26th, 1918, in a 130-line review, says:

"The goal of the authors of this very charming book is to introduce boys and girls to the life of successive ages, and so to enable them to study history, and indeed special branches of history, in such a way that the evolution of national life should appear a living thing. This we think they have achieved, and it is no mean achievement."

THE SPECTATOR, dated November 9th, 1918, in a 100-line review, says:

"A really delightful book for big children . . . interesting and charming from cover to cover."

THE MORNING POST, dated December 27th, 1918, in a 50-line review, says:

"The heart of John Richard Green . . . would have rejoiced at this history of everyday things and people in England which, though intended for boys and girls of public school age, ought to be read and studied by the parents of each one of them."

An illustrated prospectus will be sent post free on application.

# PATON'S LIST of SCHOOLS and TUTORS

**An Aid to Parents In the Selection of Schools.**

22nd ANNUAL EDITION NOW PREPARING.

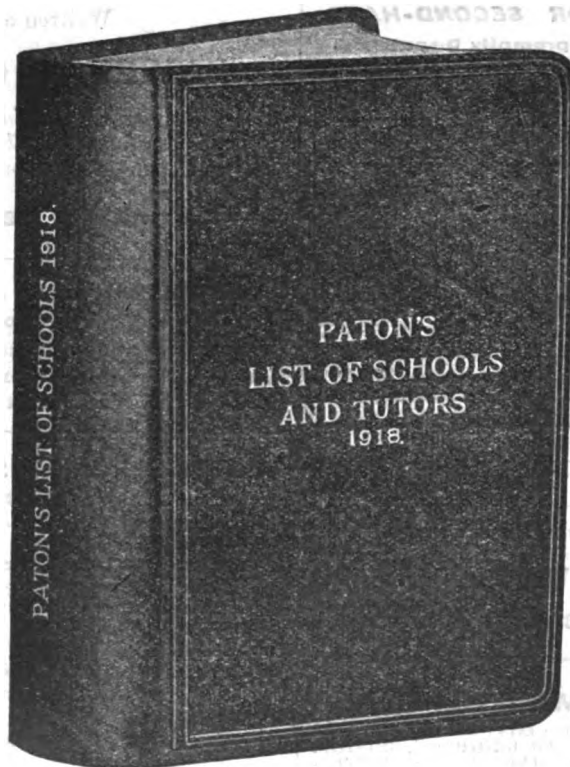

EVERY YEAR THOUSANDS OF PARENTS  
:: :: CONSULT THIS BOOK. :: ::

"When I first came here I spent over £50 in six months' advertising in the leading papers — result, **one** boy. Then I came under your agency — result, a **steady stream** of boarders every term, more than filling up the vacancies caused by boys leaving. I have already had to open another dormitory, and am on the point of 'venturing' on another boarding house."

"Please insert my pages as usual. I believe I get more pupils from that than from any other source."

"I enclose a request to have my notice renewed. I would not for anything leave it off now."

"I find it most useful to my patients when seeking information about sending their boys and girls away, and have kept a copy in my waiting-room for some years."

"Two years ago you sent me a pupil named ———. Through her parents I have had **four** good pupils this year from four different places, and through two of these I have **five** more coming this term: that is ten pupils from paying **one** commission."

"I have much pleasure in re-reading the advertisement in your excellent Guide, and should like to take the opportunity to express to you my best thanks for the invaluable help of your agency."

"I enclose order form, duly signed. . . I am more than grateful for the excellent service your Agency does my school."

**Specimen Copy and full particulars sent free of charge to  
Head Masters and Head Mistresses.**

THE  
TEACHERS REGISTRATION  
COUNCIL.

Representative of the Teaching Profession.  
Constituted by Order in Council  
29th Feb., 1912.

The Council maintains an Official Register of Teachers who have been accepted for admission under the Conditions of Registration.

The Register is open to qualified teachers in every branch, and until the end of 1920 experience under approved conditions is the sole qualification required. After that date the conditions will become more stringent.

Particulars and Forms of Application may be obtained from

The SECRETARY,  
Teachers Registration Council,  
47 Bedford Square,  
London, W.C. 1.

THE  
COLLEGE OF PRECEPTORS.  
Incorporated by Royal Charter.

BLOOMSBURY SQUARE, LONDON, W.C. 1.

GENERAL MEETING.

The Half-Yearly General Meeting of the Members of the Corporation will be held at the College, Bloomsbury Square, on Saturday, the 29th of March, 1919, at 3.30 p.m.

MEMBERS' MEETING.

A Meeting of Members and their friends will be held on Friday, the 28th of March, at 6 p.m., when the Chair will be taken by Mr. J. L. Holland and Professor J. A. Green will deliver a Lecture on "The Psychology of Appreciation."

MEMBERSHIP.

Membership of the College is open, under certain conditions, to persons engaged in education.

Particulars concerning the privileges of membership may be obtained from the Secretary.

THIS ISSUE CONTAINS:

Articles by

David Somervell, D. C. Bradford,  
and A. I. Tillyard;

A Memorial Poem

on

F. H. Dale;

with other features of interest.

The SUPPLEMENT contains  
Illustrations of the proposed  
Bolton School.

THE ASSOCIATED BOARD  
OF THE R.A.M. AND R.C.M.  
FOR LOCAL EXAMINATIONS IN MUSIC.

Patron: HIS MAJESTY THE KING.

LOCAL CENTRE EXAMINATIONS (Syllabus A).  
Examinations in Theory held in March and November at all Centres. In Practical Subjects in March-April at all Centres, and in the London District and certain Provincial Centres in November-December also. Entries for the November-December Examinations close Wednesday, October 15th, 1919.

SCHOOL EXAMINATIONS (Syllabus B).

Held throughout the British Isles three times a year, viz., June-July, October-November, and March-April. Entries for the June-July Examinations close Wednesday, May 7th (Irish entries April 30th), 1919.

Specimen Theory Papers set in past years (Local Centre or School) can be obtained on application. Price 6d. per set, per year, post free.

The Board offers annually SIX EXHIBITIONS, tenable at the R.A.M. or R.C.M. for two or three years. Syllabuses A and B, entry forms and any further information will be sent post free on application to—

THE SECRETARY,  
No. 15 BURLINGTON HOUSE, CAMBRIDGE.

THE INCORPORATED SOCIETY  
OF MUSICIANS.

Founded 1882. Incorporated 1892.

OBJECTS OF THE SOCIETY.

The objects for which the Society is established are the promotion of whatever may tend to the elevation of the status, and the improvement of the qualifications, of all Members of the Musical Profession, or may aid the musical education of the people.

ADVANTAGES OF MEMBERSHIP.

A Benevolent Fund for members, the Regulations for which have purposely been made as wide as possible in order to meet the many and very varying contingencies which arise from time to time.

An Orphan Fund for the children of musicians, which is open to the dependents of all musicians, whether their parents were members of the Society or not.

Legal advice on all professional matters; Income Tax Claims; Copyright; The Recovery of Fees, &c.

Registers open to members of "Vacant Appointments" and "Engagements," and for the transfer from member to member of pupils moving to new districts.

LOCAL EXAMINATIONS IN MUSIC.

The examinations of the Society, established in 1884, are carefully arranged in a systematic series of Progressive Grades, embracing a complete course of musical study, and constitute a most valuable guide for Teachers in recording the progress of their pupils.

Full particulars may be obtained upon application to the General Secretary, 19 Berners Street, W.1.

## MRS. CURWEN'S PIANO-FORTE METHOD. EAR TRAINING AND SIGHT SINGING FROM SOL-FA AND STAFF.

TRAINING CLASSES FOR MUSIC TEACHERS AND STUDENT TEACHERS are held at the Wigmore Hall Studios, Wigmore Street, W.1, by Miss SCOTT GARDNER and Miss MARGARET KNAGGS, A.R.C.M., on Wednesdays and Saturdays. — Write for Syllabus to either teacher at the studio.

## JOINT SCHOLASTIC AGENCY, LTD. 9 Brunswick Square, W.C. 1.

This Agency is under the direction of a Committee representing the following leading Educational Associations:—

HEAD MASTERS' CONFERENCE.  
INCORPORATED ASSOCIATION OF HEAD MASTERS.  
COLLEGE OF PRECEPTORS.  
TEACHERS' GUILD.  
ASSOCIATION OF ASSISTANT MASTERS.

Registrar: Mr. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments. The lowest possible fees are therefore charged.

Interviews by appointment from 12 noon to 1.30 p.m., and from 5 p.m. to 5 p.m.; on Saturdays, from 11 a.m. to 12.30 p.m.

A PROSPECTUS will be sent on application.

## JOINT AGENCY FOR WOMEN TEACHERS.

OAKLEY HOUSE,  
14, 16, & 18 BLOOMSBURY STREET, LONDON, W.C.1.  
Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools Association.

THIS Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

No Registration Fees are charged to members of the above Associations, and their Commissions are reduced.

Hours for Interviews:

11.30 a.m. to 1 p.m., and 3 to 5 p.m.

Saturdays, 11.30 a.m. to 1 p.m., and 2 to 3 p.m.

When possible, special appointments should be arranged.

Registrar, Miss ALICE M. FOUNTAIN.

whose credentials and qualifications  
have already been investigated.**

Principals are thus relieved of the expense of advertising and the trouble and annoyance of preliminary negotiations.

No charge is made to Principals for the service rendered.

Please write giving full particulars of requirements, when only those Candidates will be introduced that can be recommended for the particular positions vacant.

All communications are treated in the strictest confidence.

The distinguishing feature of this Agency is its personal service, its intimate acquaintance with the requirements of Principals, and its personal knowledge of candidates introduced.

A special and Confidential Department deals with the Transfer of Schools, Partnerships, &c.

Communications on these subjects should be addressed to Mr. Truman personally, with whom the interviews should be arranged by appointment.

## NOTES AND COMMENTS.

### A University of Science.

THE movement for obtaining a charter to enable the Imperial College of Science and Technology to grant degrees is now in full swing. Apparently the aim of the promoters is to set up a kind of super University, to be attended by super-graduates. This purpose is put forward against the background of our experiences during the War, when, as it is asserted, we were found to be woefully ignorant of the applications of science, and even Cabinet Ministers failed to grasp the importance of beef suet and raw cotton. Against this the debating point may be urged that Germany had her Charlottenburg for years before the War. The project of setting up a technological institute of University rank is attractive enough at first sight, until one remembers that South Kensington is scarcely to be described as an industrial region, and that technological studies must be constantly and closely related to their practical applications. One cannot conceive of a medical school without opportunities for hospital practice, and it is difficult to imagine any institution for the higher study of industrial processes being situated some scores or hundreds of miles from the centres where those processes are carried on.

### The Cost of Applied Science.

OUR modern Universities have so far proceeded on the assumption that the curriculum in each case was to include every branch of knowledge. So long as literary studies held the field this was possible, but with the development of science and technology difficulties begin to arise. The first is the lack of highly qualified teachers, especially in the department of applied science. Men with the attainments necessary for University work are able to command high payment for their services as consultants, or as members of industrial firms. Such men are not to be attracted by the comparatively meagre stipend of a University professor, unless they are permitted to engage in private practice. The permission is usually given, and one result may be that the students see very little of their professor. In one instance, a student was able to say that he had seen his chief instructor once during the session, the occasion being when he caught a glimpse of him at the end of a corridor. Such cases are, doubtless, quite exceptional, but it is obvious that the professor, with a large private practice, will tend to gather the harvest which lies before him, especially when the said harvest is increased by reason of his standing as a professor. In view of the small salary attached to his University work, who shall blame him?

**The Material Cost.**

ADDED to the cost of staffing the technological departments is the still more serious burden of providing and maintaining an equipment which shall be up to date. A single testing machine may cost £10,000, and every advance in the subject involves more expenditure, for, at all costs, a University department must be modern in its appliances. The result is a continuing burden on the University funds, a tendency to starve the literary side of the work, and an increasing drain upon the energies of those responsible for administration. Withal there is competition between one institution and another. No University can afford to fall behind in the race. Buildings and equipment must be provided for every new development of pure and applied science. The Imperial College project might be thought to offer a means of overcoming these difficulties by concentrating all the higher or specialized teaching in technology, but, as we have already pointed out, the position of the college in South Kensington makes this impracticable.

\* \* \* \*

**Specialized Universities.**

A BETTER solution would probably be found in the establishment of a plan by which the various Universities agreed to share out the various branches of technology and applied science, each taking one or more, and choosing those most suited to its position and circumstances. Thus, Manchester might offer advanced instruction in all departments of textile engineering connected with the cotton trade, Leeds might develop its department of the technology of dyeing, Liverpool might deal with shipbuilding, and so on. Thus it would be possible to avoid duplication, to offer adequate salaries to the first-rate teachers, and to link up each study with the practice of the related industry. To make this plan work we should need an arrangement between the Universities, each agreeing to accept from the rest students who had gone through the general preliminary parts of the degree course and desired to undertake special work for the final. Such a plan is gradually being evolved in practice, especially in regard to graduate students. We might well have a University of the United Kingdom, treating each of the existing Universities as parts of one national institution.

\* \* \* \*

**Our Occasional Correspondent writes—**

IN *The Sunday Times*, Mr. S. P. B. Mais has been saying some plain things about the Public School Master, his position, and his prospects. He says true things as well as plain. The Public School Master is atrociously underpaid and overworked. His decent coat, his clean shirt, his clean lodgings, his use of books and laboratories, his opportunities for the preparation of work in quiet, are all part of his stock-in-trade; and he is like an officer in an army: he cannot afford to dispense with the trappings and the suits of authority.

To do all this he receives an average wage, which would be despised by the least uncivil taxi-cabman in England.

But is not the remedy, to a great extent at least, in his own hands? Of all self-critical creatures, the English dealer in education is the most persistent and ultra-frank. For instance, we have had a retired Chief Inspector of Elementary Schools, a poet and a very charming and persuasive writer, telling us, proclaiming *urbi et orbi* that we are radically misled, misdirected and misdirecting—

After a toil so weary and so long,  
That all his life he has been in the wrong.

It is not true, this sweeping charge. We have been mostly right. The men and women who have inspired and effected the saving of the world have been the products of our schools, of our "system of education," as the cant phrase has it. One cannot localize the great and brave spirit that has worked this great thing. It is in the air, it is about us, it is in the souls and the atmosphere breathed by the English people. Let us, who know them, praise our schools, not decry them.

It is quite easy to write letters to the papers to show that the youngest clerk in the office is weak in arithmetic, or even that he, or Cabinet Ministers, are unaware that fats are necessary to make explosives. These things should be put right, and can be put right. But the schools have done, and done well, the chief thing required of them, to the extent of their opportunities. There is a balance of fair-mindedness, essential kindness and intolerance of cruelty, and a practical intelligence and adaptability in favour of the blundering Englishman all the world over. Not a little of this, nay, the greater part of it, is due to the schools.

The unsatisfactory state of the education market, so to call it, is in the highest degree owing to the underpayment of teachers. And the teachers are underpaid because their labour is mostly casual labour. When the "dockers" had to stand in scores at the dock-gates waiting for the favour of selection for a casual job, they had to be content with fourpence an hour. They were paid according to the "higgling" of a tyrannous "market." Yet the "dockers" had spent very little of their time in efforts to qualify for their work, nor had they a "position to keep up" as part of their equipment.

The "dockers" organized themselves. In spite of the opposing authorities, Aaron—or was it Mr. John Burns?—"numbered them by their armies"; and they prevailed. It is not necessary for teachers to contemplate the "strike" which Mr. Mais would be sorry (we are sure) to see. There is something more than the dignity of a great—really great—calling to forbid that. The world, it may fairly be hoped, as soon as equilibrium is secured, will be more open to reason than has been possible while it has been thought

righteous only to buy in the cheapest market in order to sell in the dearest. But teachers must speak with one voice if they wish to be listened to, if their opinions are to be respected. Did not the great Greek write: "What all men think, that, we say, is"? To this end the Register is one way, if not the only one.

\* \* \* \*

#### Mr. Fisher on Private Enterprise.

Speaking at the Saddlers' Hall on The Functions of Government in Relation to Education, Mr. Fisher said he would not deny that the changes which had been accomplished since he came to the Board of Education two years ago had tended to increase the weight and power of the public as opposed to the private system of education in the country. More money had gone to the teachers, both in the way of salary and of pension, larger grants had been procured for secondary and elementary schools, and it had consequently been made more difficult for weaker schools, standing outside the State system and depending on voluntary contributions, to compete with the schools aided out of public money. Although the State covered a large part of the educational area, it made no attempt to cover the whole. It looked for support from private enterprise and benefactions. If a thing could be done by individual enterprise, an Englishman always preferred it to be done in that way rather than by State intervention.

\* \* \* \*

#### Belief and Action.

From these words it is evident that Mr. Fisher knows quite well that unless England suffers a great change there is no likelihood of private enterprise in education being given up from choice. Yet there is a danger of its being hampered and made less efficient than it ought to be through the financial measures to which he refers. In all honesty the question should be faced. Are we willing to smother all private schools and replace them by public institutions? If we are, then we ought to estimate the cost of providing the necessary schooling for the many thousands of middle-class children now attending private schools. We ought to consider what is to happen to the teachers now conducting such schools, and, above all, we ought to estimate the consequences so far as the spirit of English education is concerned. When this process of meditation and calculation is ended it is not unlikely that we shall reach the conclusion that on the whole the best plan is to help private schools to make themselves thoroughly efficient as a part of the national system. We have agreed that this system will properly reflect the English desire for freedom and individuality. Let us then face facts as they are and go boldly forward in the direction of encouraging such private schools as are willing to come in to the extent of accepting reasonable inspection. In return let us place them on a fair financial basis; and in particular let us admit that an efficient teacher in a private school has a good right to State recognition and help when he comes to be superannuated.

## CAN THESE BONES LIVE?

By DAVID SOMERVELL.

### I.

THERE must be few teachers who never put this question to themselves. No doubt they feel the branch of learning they teach is a very fine branch of learning; and the boys are very jolly boys. If they don't feel both these truths, they should try another profession. But—what a gulf is fixed between the fine learning and the jolly boys! What a ramshackle bridge of rudiments, shoddy, and cram we find ourselves building for the jolly boys to cross! How completely the bridge blocks out the view of the country on the other side! Or, again, since this first metaphor is beginning to embarrass me—what dry bones!

There are only three sorts of teachers who do not know the recurrence of this mood: the genius, the self-satisfied ass, and the man so dull and unambitious that he never hopes or expects to make a success of his job, nor has even figured out to himself what failure is and what success would be.

Not to these, but to the others, I address myself; and in a series of articles I propose to describe a few devices I have tried from time to time which seemed to help to clothe the bones with flesh and breathe life into them. The devices are probably not new. I thought them out mostly for myself, but if I had been less lazy in the matter of reading educational books I might perhaps have found that my betters had trod the same road before me. Probably, too, anyone who has the energy to read this article will have hit on better devices for himself. None the less he may be glad of mine, even as I should be glad of his. For there is nothing like novelty in educational method. I believe every small child likes playing at "Robinson Crusoe." The thirst for pioneering is very strong in the young, and the sense of pioneering,—even if it be only the illusion of pioneering—is an invaluable aid in teaching. Have you ever noticed that the new master, if he is not incompetent, is about the most successful man on the staff? He is exploring his work, and unconsciously gives his pupils a sense that they are explorers also. What crushes the young, though they know it not, is a feeling that they are being moulded in accordance with an old tradition by time-worn methods. They feel—though, again, they know it not—that they are very different from their uncles and require a different treatment. "True," you will say, "but they are getting a different treatment; my methods were introduced as recently as 1912." But 1912 is prehistoric times for the schoolboy, who generally assumes that every master who has been teaching at the school longer than he can remember is about the same age as his own father. The particular device I propose to describe in this article I first put into practice in 1912. By 1918 it seemed to be becoming stale, and I put

it away until it should be entirely forgotten. The time has about come round for "inventing" it again.

In these articles I shall restrict myself to my own subjects—History, English, and Divinity. The present article concerns itself with History.

The drawback of history is, oddly enough, that it is apparently over and done with. There are two ways of getting over this drawback: one, the more fundamental, is to show its vital connexion with that present-day history which is called politics; the other, the more superficial, is to pretend that it is not over and done with at all. In this article I deal with the second way.

Let us pretend that one of the great events of our period has just occurred, and let us construct the relevant daily newspaper. Here we must admit one bold anachronism and assume that the present-day press, with all its telegraphic facilities, is in full swing. And it will simplify matters if we choose at once a particular event for the purpose; so let us take the attempted arrest of the Five Members by Charles I on, I think, January 4, 1642.

The first question is, What party does our paper support? for on that the whole superstructure will depend. The example chosen is a good one, because there were three parties at the moment, all important and with clearly distinct points of view. Shall we take the *Protestant Herald*, supporting Pym; the *Constitutional Gazette*, supporting Hyde and Falkland; or the *Crown and Sceptre*, standing for Divine Right? Such descriptive titles are, of course, not essential. It might even be not a bad plan to pick for each point of view the name of the most congenial paper of to-day, and write the *Daily News*, the *Times*, and the *Morning Post* respectively. But this may confuse more than it elucidates.

Then we come to the contents of the paper, and a most valuable political lesson stares us in the face—a lesson which few boys of sixteen realize until they run up against it. A newspaper consists of two parts: *news*, which must come originally from the scene of action, and *comment*, which may be written in the editor's office. The most weighty and important commentaries are, in fact, there written, and are called "Leading Articles." What is the object of the "Leading Article"? Not "history," though we may assume that the editor is not wholly indifferent to the dissemination of truth, but the formation of political opinion with a view to the guidance of future political action. The "leader" is, in fact, a kind of "sermon." But suppose the "text" (i.e. the "news") is an unwelcome one. Here a variety of ways are open to us. One is, doctor the news itself, or present it in a palatable form. "Our Special Correspondent" from the scene of action will despatch the news itself in a form that the "leader writer" will find agreeably digestible. But this is a subtlety. We had better assume that the news is impartially stated by a kind of ideal "Reuter."

Here we have two tasks for the form, and it is most instructive how difficult the stupider boys find it to keep them apart. And of course they find it equally difficult to shut out all knowledge of the immediate future.

The compilation of the news sends the boys to the big history books for the picturesque details. That in itself is an excellent thing, but at this point we

are apt to get "immersed in matter," and it is best to select an event of which a comparatively short description will be really adequate, for the "leader" is the more valuable task. I need not enlarge upon the problems of its composition. The crucial question is "What will the editor want his party to do now, and how can he best suggest that they should do it?" It is a good plan to ask the leader writers to include a certain amount of forecast in their work. The quick-witted boy will produce a forecast that is at once plausible and also slightly, not necessarily wildly, wrong.

These are the main elements. But it is sometimes worth while to allow the form to devote their first page to advertisements, with the strict proviso that the advertisements must be genuinely topical and are purely voluntary. Here is a chance for the draughtsman, and also for the wit, both broad and subtle. It is remarkable what a lot of wit of both orders may be produced. I will not weary the reader with examples. He will prefer the specimens he gets shown up to himself if he makes the experiment.

One word more. When is this to be done? Out of school, in place of the weekly "essay"—twice in the course of a term? Yes, it will take a good long time, and the boys who make a real success of it will have devoted a good deal of spare time to it. It should be set at least a week, possibly a fortnight, in advance. After all, it is the voluntary and the extra work that is worth its weight in gold. Sometimes, however, it is as well to cut out both news and advertisements and set only the "leader," which, for a Lower Fifth form or thereabouts, should be from 400 to 600 words.

---

## IN MEMORIAM

FRANK H. DALE,

Chief Inspector of Elementary Schools.

---

HIGH-HEARTED gentleman and noble friend,

Subtle and simple, true, and quick as thought,

Would you had lived to see the battles' end,

The goal attained for which our heroes fought!

The wounds that pierced them wounded you no less;

Our fears for ours in peril were your fears;

You shared—how tenderly!—our deep distress,

And with our weeping blended your own tears.

Ah! I would fain believe it was of choice

You fled with that great Company of souls,

In their great joy and honour to rejoice

Where strife is not nor battle-thunder rolls.

And I, when energy in darkness faints,

I think of you and them, the promised Home;

I know there is Communion of Saints,

I know you living in a world to come.

B.

## TERCENTENARY OF A FAMOUS SCHOOL.

By A. I. TILLYARD,  
Chairman of the Governors, The Perse School,  
Cambridge.

THE Perse School owes its existence to the generosity of Stephen Perse, Doctor of Medicine and Fellow of Gonville and Caius College, who died in 1615. Perse was a man not only of large property, but of liberal ideas, and, among other benefactions, he provided "a grammar school with one lodging chamber for the master and another for the usher," and he further willed that "five score scholars be in the said free school taught and instructed."

The Perse School has produced its full quota of illustrious men, whose names are emblazoned on the tablets in the School Hall, but of these there is no space to write; one must hasten to the present century. The Perse has, since 1900, been brought into notice by the work of its Head Master, Dr. Rouse. During the last eighteen years it has done pioneer and experimental work in education which, in the writer's judgment, cannot be matched by any other school in the United Kingdom. Dr. Rouse is, before all things, a teacher of languages, and it is in this department that his greatest success has been gained. He has had the courage to begin with English, and make it the foundation of the whole linguistic course. Many of us who have reached the later years of life look back with amazement, not altogether free from disgust, at our school days, when it was Classics all the morning and Mathematics all the afternoon, and English had to be learned by one's self as best one could. The Perse boy is privileged to be at once introduced to his own language. He is taught to speak correctly, to read clearly, and to express himself in writing. He reads and is read to, and thus learns to know a good book from a bad one. Above all, he is encouraged to practise the art of original composition. The writer has had the opportunity of seeing the method pursued. It has not been possible to make a finished literary artist of every boy. There is always some hopelessly refractory material; there are others who never attain to more than mediocrity; but there is a residue which makes up for the deficiencies of the rest, and the published collections of their compositions show some really astonishing results.

The facts common to all languages have been incidentally presented to the pupil; he is ready to take a step forward. The first foreign language taught is French: and it really is taught. Perse boys go to France, and find not only that they can make themselves understood, but that they understand what is said to them—a far more difficult accomplishment. How many of our public schools teach modern languages on this fashion? What is the secret of this success? It lies in an early start. The boys begin in the preparatory school at an age when the vocal organs are supple, the ear quick, the imitative faculty strong, and when all learning is so new that nothing is uninteresting. They are first of all drilled in correct pronunciation, the teacher's voice being supplemented by

the phonograph when necessary. Then they go on to express themselves orally in simple sentences. Thus the way is opened, and only perseverance is needed to turn out boys to whom French can become as easy and familiar as their mother tongue. Modern languages, it may be repeated, if they are to be spoken, must be begun when the pupils are young, before self-consciousness sets in. To expect an average English boy of fourteen to allow his class companions to witness his clumsy efforts to express himself in a strange tongue is to ask too much of human nature.

Still following the principle of one new language at a time, what is the next stage? Obviously it is to learn Latin, which lies at the foundation of French, and, in a lesser degree, of English, and is essential to the proper understanding of either. It is here that Dr. Rouse has made his boldest departure from traditional methods. Latin was a living language, the medium of international communication up to the time of the Renaissance and the Reformation. Since then it has been a corpse laboriously dissected by means of grammar and dictionary. Why not make it live again? This has been done at the Perse, as any one who visits the school may see and hear for himself. The results are most encouraging. Dr. Rouse calculates that a boy taught in this way has at the end of the course learned as much in one hour as he would have learned in four hours under the ordinary method. What a saving of precious time! Then, most important of all, the boys are really interested in their work. Latin being taught as a live thing, the Romans become a live people, and their history and literature take on a real fascination. The fourth language to be attempted is either Greek or German, and here the same methods are followed with equally great success.

In mathematics and science the curriculum has been carefully thought out and improved, and the Perse is fully up to the level of the best teaching. In these branches it would fain make an advance similar to that which has been made in languages; but science is the most expensive of all subjects: it demands ample space, delicate apparatus, and expensive material, besides a highly trained staff. The school has found itself seriously crippled by inadequate financial resources, and Dr. Rouse has had to struggle with constant pecuniary difficulties. He has had to do what he could, not what he would have liked to do. Given the means, the Perse might make as great a revolution in the teaching of science as it has done in the teaching of languages.

Stephen Perse's will did not take effect till 1618. Last year was therefore the School's Tercentenary, and its friends have started a Perse Tercentenary and War Memorial Fund. A list of requirements has been drawn up, which shows that the Governors could find profitable employment for at least £50,000. They would be satisfied to complete their programme by successive stages, but they are greatly desirous of raising at least enough to give the Head Master opportunity of carrying his work of educational reform to something like completeness.

SCHOOL VISITS TO A FAMOUS MUSEUM.—The scheme for visits of school children to the Salford Museum has been very successful during the past year, over two hundred and fifty groups paying visits between March 4 and October 25. Some of the scholars visited the museum for study of the rearranged Greek pottery and of Egyptian, Assyrian, and Greek sculpture and antiquities.

## THE OPERATION OF WEIGHING.

By D. C. BRADFORD.

THE method of weighing still frequently adopted in chemical laboratories is to shift the rider until the pointer gives two equal swings on either side of the zero. Often the operator uses a set of uncalibrated weights, and usually no allowance is made for the buoyancy of the air. Although it is well known that each of the weights used may be inaccurate to the extent of several tenths of a milligram, and that the effect of the buoyancy of the air may, in the case of bodies of considerable volume, cause an apparent loss of weight of a decigram, the ostrich-like opinion, as it would appear at first sight, seems to be held that in this way the mass of a body can be determined to within a tenth of a milligram. However, the attitude must not be attributed to lack of scientific insight, but rather to force of habit following on bad instruction.

Even after making allowance for these errors in weighing, the limitations of a balance are much greater than usually supposed. It is generally accepted that a good balance, carrying 200 grams, should turn with certainty with 0.1 milligram. This degree of accuracy does not apply to weighings made over a period of more than a few days. In the course of a research in which it was necessary to make accurate weighings extending over some months, Blount [J. Chem. Soc., 1917, III, 1035] was driven to the conclusion that the balances were liable to variation. Investigation by three observers in two different places, over a period as short as three months, showed that six balances by the best makers were liable to variation by as much as from 0.4 to 1.6 milligrams. The cause of this variation was not ascertained with certainty, but appeared to be due to the fortuitous movements of the knife edges in their settings, which seemed liable to occur at any moment. As many chemical and physical experiments are necessarily lengthy, such alterations in the balance may lead to grave errors. With balances at present available, the only method to obtain exact weighings appears to be to weigh the body in each pan.

It seems a matter of fundamental importance, therefore, that science students should be taught the limitations of a balance from the first. The method of weighing by oscillations is more simple, more accurate, quicker, and theoretically more sound, than that of moving the rider. The only reason that it is not more generally adopted would seem to be faulty training. The writer is of the opinion that when a student begins to use a balance he should be taught to weigh in this way, whether it be at school or college. The inaccuracy of the weight should be pointed out, and as soon as he is able to understand the reason he should apply corrections for buoyancy and calibrate a set of weights. At first a curve giving the sensitiveness of the balance at different loads may be provided. With a little practice it will be possible to place the rider at once within about a milligram of the true position, after which it is merely necessary to observe an odd number of oscillations of the pointer.

If the turning points are estimated to the tenth of a division, this gives the weight within the tenth of a

milligram; or the mean of three or four observations gives an accuracy of about one-hundredth of a milligram, the whole operation taking little more than a minute on a quick-acting balance.

It does not seem to be generally appreciated that the method of weighing by oscillations can be applied to an ordinary rough balance, thereby giving a sensitiveness of about a milligram. The writer recently had occasion to make some density experiments with a Gay-Lussac specific-gravity bottle when an analytical balance was not available. Rather than waste time by waiting, it was determined to try if sufficient accuracy could not be obtained on a rough balance. Expectations were fully realized in the result. The balance used had V-shaped steel knife-edges, no beam support, levelling-deuce or rider, and the pans were released by raising the beam. The only auxiliaries provided were a rough screen of wood and glass, to prevent draughts, and a rectangular reading-glass, supported in front of the scale to aid in reading the turning-points. The latter was not really necessary: by using an accurate centigram weight, to determine the value of a scale division at each load, and taking the mean of five observations of the rest point, it was possible to calculate the weights to within the tenth of a milligram. And, thanks to the rapid action of the balance, the weighings took much less time than on an analytical balance. This would be a great advantage in many experiments.

As an example of the accuracy obtainable, three determinations of the volume of the specific-gravity bottle may be quoted:—

64.9431.

64.9430.

64.9424.

The two first determinations were made with the same bath, the third a few days later. The temperatures were estimated in tenths of a degree with a thermometer graduated in single degrees. Since an error in estimating the temperature of only 0.05 would affect the calculated volume by 0.0006g., the volumes found are well within the limits of experimental error.

The suggestion seems worth considering that the most promising boys might be taught at school to calibrate a set of weights on a rough balance, using an accurate centigram weight. When this has been done the length of the balance arms calculated, showing the value of a division at each load, a student will know more about a balance than many of those who have been engaged in shifting a rider for years. How many schoolboys, longing to undertake quantitative work in their own homes, would be delighted to learn that they need only a rough balance and a cheap set of weights with the addition merely of an accurate centigram weight for use in calibration?

---

A SHORTHAND TEACHING RECORD.—On July 29, 1918, by Special arrangement with the War Office, a class formed of members of Q.M.A.A.C. commenced the study of shorthand at Pitman's School, Southampton Row, W.C.1. After 150 hours' instruction (equal to five weeks' tuition of six hours per day), nine students passed the official test at a hundred words per minute. The matter forming the test was of more than average difficulty, having been selected for the purpose by the military authorities. The examination was conducted under the supervision of a commissioned officer of Q.M.A.A.C., who checked the time.

## SUBJECTS AND METHODS.

### He little knows of England who only England knows.

Teachers sometimes debate whether it is better to begin history-lessons with This Year A.D. (in which case we should now be making children wise by the accounts of the Paris Conference, Mr. Horatio Bottomley's activities, &c.), or with the cave man and the ancient Cretans. It appears to me that the proper method is to begin with primitive times and work on towards to-day, but with a perpetual consciousness on the part of the teacher that the whole story is to lead up to the present situation. In the case of England, the present situation is a complex of world-wide relations. Hence, from the very commencement of English history-lessons (given, say, to pupils aged seven or eight), as vivid pictures as possible should be presented of the peoples and countries with which the inhabitants of this island had effective contacts, such as Romans, French, Flemings, Saracens, Hindus, negroes. Let it be noted that every one of these contacts can be illustrated, in romantic and dramatic ways, from literature or folk-lore—Plutarch, Arabian Nights, Brer Rabbit, &c. While the children (pictures and maps assisting) take in the ideas of external relationships and contacts through such stories, the teacher will frame his thoughts on the principle expressed in a booklet, "The Science of History" (Longmans), by Prof. B. K. Sarkar, of Calcutta;

It is impossible that a nation should be able to acquire or preserve freedom and prestige solely on the strength of its own resources in national wealth and character. Every people has to settle its policy and course of action by a careful study of the disposition of the world-forces, and the situation of the political centre of gravity at the time.

This wide sociological outlook has been reached by a Hindu lecturer. When such views are developed in "The Unchanging East" (an idiotic phrase that!) we may hope they will filter into the elementary and secondary schools of England. But the moment this large principle is accepted, vast masses of stuff crumble out of the conventional history-teaching, and their place is taken by lively details concerning people and doings overseas. For example, instead of letting Julius Caesar drop upon the Britons with the suddenness of an aeroplane descending upon a remote Arab village, let us prepare the way for him by relating stories and legends of the Roman people. Then Julius fits into a historical cosmos; instead of leaping out of the void in the absurd old style of—"In the year 55 B.C. Julius Caesar, a great Roman general, invaded Britain," &c. This method will take time, say two or three lessons. Any sane teacher will joyously steal this time from the portion wickedly monopolized by dry catalogues of Old English Kings and their battles. We can dispense with tribes of Egberhts and Eadgyths. If any sceptic grumbles that such a plan allots too much attention to the Romans, it should be enough to remind him not only of the influences of Roman law, Roman political ideas, and the Latin language, but also of the subtle effects—visible in the War of 1914-1918—of the inclusion of England within the circle of Roman administration and the later religious (Catholic) culture.

In the same manner one should deal with the Hanseatic League, Flemings, Italians (Lombards of Lombard Street, &c.), Spaniards, Hindus, Kaffirs, &c. Every relationship or contact must be symbolized by scenes, adventures, and human interests, not cramped into dull foot-notes or appendixes. It is a gross sin against history, for instance, that, to many English children, India before the nineteenth century means nothing but Surajah Dowlah and the Black Hole, with tigers, elephants, and "idolators" in the background. The political and intellectual linking-up of India and England is one of the stupendous events of world-history, and our concrete and literary teaching should lead up to this conception with the utmost painstaking. And for this purpose we can pitilessly sweep out of our instruction heaps of rubbishy items about Queen Elizabeth's favourites, or the disposition of cavalry at the battle of Malplaquet.

One other example will suffice—that of the relationship of England and France. The facts of human geography (to adopt a term so ably illustrated by Brunhes, Geddes, Fleure, and others)

show that the two countries must necessarily have had intimate dealings, whether of conflict or commerce or interchange of ideas. Their mutual reaction has been, and remains, one of the supreme factors in human evolution. Have we justly treated this factor by our snippets about Crécy, Poitiers, or the "Up, Guards, and at 'em!" at Waterloo? Have we no tales to tell of French industry, invention, exploration, colonization, and literary achievement? For blaze of colour and fundamental human values no history surpasses that of the France with whom destiny allied us in the grand struggle against the Central Empires. The soul of English education has not yet been overdone with colour.

Do not mistake me. I do not want England to be half-hidden by facts about foreigners. The central genius of our story must be the England of our Westminster, Birmingham workshops, miners, peasants, seamen, Shakespeare, Bunyan, Gray, Dickens, and the "Contemptible Army" of 1914. But our nation is such that its greatness is best understood when set in its great environment through the ages.

Meanwhile, those who would gain an insight—especially of the economic sort—into the meaning of environment might pleasantly spend a long day in examining the map of the "British Isles and their relation with the trade of Europe in the Middle Ages," attached to Mr. Jendwine's admirable "Foundations of Society and the Land" (Williams & Norgate).

FREDERICK J. GOULD.

### Unemployed Juveniles.

There are at present over 30,000 young people registered at the Employment Exchanges as unemployed. Many of these have been engaged during the past five years on adult work at more than pre-War adult wages. They have tasted independence and an unexpected accession of wealth. The close of hostilities has brought both to an end, leaving them to the generosity of the State with its scheme of unemployment pay. This amounts to 14s. 6d. a week for boys and 12s. 6d. a week for girls. The money is paid only under certain conditions, the first being that the applicant can find no suitable work, the second that the recipient must attend at a Centre of Juvenile Instruction. Of these centres there are over ninety established throughout the country, twenty-six being in London. They are housed in such buildings as polytechnics, elementary schools, mission rooms, or in halls lent for the purpose. Teachers for the boys are obtained among demobilized soldiers with a teacher's experience, while in the case of the girls women ex-teachers have been employed.

The centres are at work for five hours a day as a rule, the morning and afternoon sessions lasting for three and two hours respectively. By arrangement with the local Employment Exchanges reports of posts vacant are sent daily to the Heads of the Centres, and suitable applicants are sent off at once to be interviewed. This practice makes the work of the centre very uncertain so far as individuals are concerned, and a remedy is sought by making the lessons each complete in itself. At all centres physical drill plays an important part, and the boys have gymnastics, boxing, wrestling, and football. For the girls Swedish drill and indoor games are provided. The classroom subjects vary according to local needs. Generally speaking, the boys demand instruction in building construction, engineering—especially motor engineering—and workshop practice; while the girls spend some of their time on housecraft, including sewing, cookery, and laundry work. Sometimes lectures are given with lantern illustrations, and talks are held on such topics as the arrangement of rooms in a house, occupations for women, and the work of women clerks. Ordinary subjects are treated in a manner designed to arouse interest. Thus, in London, lessons are given on London topography, with talks on such themes as the great railways and their termini. In this way a considerable amount of interest is aroused, while the instruction given is by no means useless. It serves to awaken new ideas, to widen the outlook of the young people, and the compulsory attendance at the unemployment centre will mark the beginning of a new way of life in many instances.

## CHRONICLE OF EDUCATION.

- 20 Feb.—Announcement of Sir Ernest Cassel's gift of half a million pounds for educational purposes. Trustees: Mr. Asquith, Mr. Balfour, Miss Fawcett, Mr. H. A. L. Fisher, Lord Haldane, Sir George Murray, and Mr. Sidney Webb; Secretary, Mr. A. E. Twentyman, 6 Stanhope Gardens, Highgate, N.6. Specified objects of the gift: The promotion of adult education, scholarships for working-men and their children, higher education of women, foreign languages, the foundation of a Faculty of Commerce in the University of London.
- 21 Feb.—Conference at Reading on Nature Study and Play in Schools. Addresses by Miss Silsby, Mrs. Brierly, and Dr. Reaney.
- 22 Feb.—Mr. Fisher addressed a meeting at Oxford on "The Place of the University." He said that the business of a University was not to equip students for professional posts, but to train them in disinterested intellectual habits.
- 21-22 Feb.—Annual Meeting of the Association of Technical Institutions.
- 27 Feb.—The Education Grants (Winding-up) Regulations issued by the Board of Education (Statutory Rules and Orders, No. 247).
- 7 March.—Board of Education issue Draft Suggestions for the Arrangement of Schemes under the Education Act, 1918. (Circular 1096. Price 6d.)
- 11 March.—Issue of Draft Rules and Orders with regard to payment of grants for Elementary Education for the period ending March 31, 1919.
- 12 March.—Mr. Fisher received a deputation from the Parliamentary Committee of the Trade Union Congress in favour of free secondary education, a higher age for compulsory full-time attendance, and a revision of the curriculum of elementary and secondary schools, especially in regard to history and allied subjects.
- 14 March.—Council Meeting of National Society of Day Nurseries. Address by Mr. E. H. Pelham, of the Board of Education, who said that a day nursery was intended for children whose mothers were at work, whereas a nursery school might take any child which would benefit by admission. The schools would have no children under two years of age, and would be kept small—from forty to fifty children.

### Announcements.

- 27 March.—Teachers' Guild: Discussion on Modern Language Teaching, 9 Brunswick Square, 5 p.m.
- 28 March.—College of Preceptors, Members' Meeting. Lecture on "The Psychology of Appreciation," by Prof. J. A. Green. Mr. J. L. Holland presiding. Tea 5.30 p.m. Lecture 6 p.m.
- 29 March.—General Meeting of the College of Preceptors, 3 p.m.
- 1 April.—Teachers' Superannuation Act comes into operation: also several sections of the Education Act (1918), notably those affecting the payment of grants to State-aided schools, and the requiring of information from those responsible for privately-conducted schools.
- 22 April.—Annual Conference of the National Union of Teachers begins at Cheltenham.
- 22 April.—Annual Meeting of the National Association of Manual Training Teachers, Central Hall, Birmingham.

## PERSONAL NOTES.

### Sir Oliver Lodge.

Sir Oliver Lodge announces his retirement from the position of Principal of the Birmingham University. The event has more than a personal significance, for Sir Oliver Lodge has been Principal during the whole stretch of the life of the University, and his service covers the greater part of the period in which the Universities in great industrial centres have been building themselves up. All honour is due to the pioneers in a movement that has had fine results in the past and is destined to play a very great part in the educational developments of the future. Sir Oliver Lodge chooses the moment when reconstruction in education is an important part of national policy to leave to other and younger hands the changes that must be made in the provincial Universities. In so doing he allows scope for active reorganization, while himself turning back to that experimental and scientific work in which he has won distinction, even while bearing a great burden of administration.

### Hulsean Lecturer at Cambridge.

The Rev. Alexander Nairne, D.D., Fellow of Jesus College, has been appointed Hulsean Lecturer at Cambridge for the ensuing academical year. Dr. Nairne had a distinguished career as a theological student, taking a first class in the Theological Tripos in 1886, and the Jeremie Septuagint Prize, the Carus Greek Testament Prize, and the Crosse scholarship. He is examining chaplain to the Bishop of St. Albans, Professor of Hebrew at King's College, London, and Canon of Chester.

### Miss Kingsland Higgs.

Miss Kingsland Higgs, M.A., sixth-form mistress at Glasgow High School for Girls, has been appointed Head Mistress of Roan Girls' School, Greenwich, in succession to Miss Spalding Walker, who will retire at Easter.

### Captain J. R. Strickland.

Captain John Reynolds Strickland, R.A., of Vanbrugh Park, Blackheath, has been appointed Head Master of Farnham Grammar School, in succession to the late Rev. S. Priestley. There were 220 applications. Captain Strickland is M.A. Cantab., Wrangler in Mathematical Tripos, and took Second Class honours in the Science Tripos.

### Dr. Gow of Westminster.

The Rev. Dr. Gow has resigned the Head Mastership of Westminster School, which he has held since 1901, and will retire in July next.

Dr. James Gow was born in 1854, the son of James Gow, a member of the Royal Society of British Artists, and was educated at King's College School and Trinity College, Cambridge. His University honours included Third Classic and Chancellor's Classical Medallist, and Literarum Doctor. From 1876 to 1878 he was a University Extension Lecturer, and in 1879 he was called to the Bar at Lincoln's Inn.

Dr. Gow served as Master of the High School, Nottingham, from 1885 to 1901, and in the latter year succeeded Dr. Rutherford at Westminster. As master of the school, which has acknowledged the authority of such worthies as Busby, Camden, and Liddell, he has been a conspicuous success.

The regard in which Dr. Gow is held in the profession is shown by his Presidency of the Head Masters' Association and Chairmanship of the Head Masters' Conference on two occasions. He is the author of a number of classical publications. Dr. Gow's youngest son, Lieutenant Roderick Gow, of H.M.S. "Defence," was killed at the Battle of Jutland.

## EDUCATION ABROAD.

### Queensland's Educational System.

The Queensland Government in the year 1917 spent £723,531 on education, which expenditure was made up as follows:—Administration and inspection, £26,889. 5s. 5d.; primary education, £569,779. 6s. 8d.; secondary education, £56,350. 7s. 5d.; technical education, £41,458. 2s. 9d.; University education, £18,125. 11s. 7d.; training college, £5,493. 19s. 8d.; schools of art—grants in aid, £5,434. 10s. 11d. Of the cost of primary education (including administration and inspection), the sum of £26,889 was for administration and inspection; £544,133 was for State schools; £11,077 for provisional schools; £7,198 for itinerant teachers; and £7,370 for medical inspection of school children. The cost of administration (£15,059) was 2.1 per cent. of the gross departmental expenditure; for 1916 it was 1.9 per cent. The cost of inspection was £11,829, or 2 per cent. of the expenditure on primary education; for 1916 it was 2.2 per cent. The whole charge for administration and inspection was £26,889, or 3.7 per cent. of the whole expenditure; for 1916 it was 3.7 per cent. For all schools (State and provisional) the total expenditure on primary education, £596,668. 12s. 1d., divided by the average daily attendance, 47,412, gives £6. 16s. 6½d. as the average cost of each pupil in attendance; for 1916 the average cost was £6. 3s. 9½d. The average cost of the education of a pupil in a provisional school was £7. 3s. 10d.; that of a pupil in a State school was £6. 14s. 8½d. For all schools (State and provisional), the total expenditure on primary education, £596,668. 12s. 1d., divided by the net enrolment, 113,188, gives £5. 5s. 5½d. as the average cost of each child who claimed the right of instruction during the year 1917; in 1916 the average cost was £4. 12s. 7¾d.

### Germany and Research.

The following statement of the German *Zeitschrift für Elektrochemie* appeared recently:—"The chemical manufacturing industry has subscribed £500,000 towards developing instruction in University laboratories. A further half million has also been promised."

### Japan's Education Budget.

The House of Representatives passed the Budget recently and sent it to the House of Peers. Baron Sakatan spoke with cordial approval of the increased amounts proposed to be spent on education, the increase being unprecedented and forming a special feature of the Budget. Baron Sakatan also asked whether the new movement in education involved a departure from a recent dangerous tendency in the direction of officialdom, and said that it was important to consider the spirit of education rather than the outward form or system. Apparently, the question of national education is receiving great attention in Japan, where it is regarded as the most important factor in reconstruction.

### Alien Children in Schools

Mr. Fisher states in the Parliamentary papers that his attention has been called to several cases in which children of alien parentage born in this country were excluded from schools on the ground that their admission in the then state of public feeling would have been prejudicial to the welfare of the schools. He sincerely hoped that the local education and school authorities would now reconsider the matter, and would find it possible to admit these children to the benefit of the public system of education without prejudice to the schools. "It cannot," he adds, "be in the interest of this country to treat as if they were enemies children who are British by birth, and to deprive them of the influences and associations which will ensure their growing up as loyal British subjects."

## SCHOOLS, COLLEGES, AND UNIVERSITIES.

### A Cambridge D.Ph.

The recommendation of the syndicate appointed to consider the means of promoting educational collaboration with the Universities of the Empire and foreign Universities in favour of establishing the degree of Doctor of Philosophy for research students, was carried in the Senate at Cambridge by a majority of fifty-eight votes.

### A Bradley Chair of English at Liverpool.

The Council of Liverpool University has founded a second Chair of English Literature, to be entitled the Andrew Cecil Bradley Chair, in honour of Prof. Bradley's high services to University College as the first holder of the existing King Alfred Chair, as well as of his literary distinction.

The Council, on the recommendation of Faculty and Senate, has appointed as the first holder of the Bradley Chair, Mr. Robert Hope Case, M.A., who has been Associate Professor and Lecturer in the department since 1907, and whose eminent scholarship, especially in the field of Elizabethan letters, and his experience and success as a teacher, are well known.

### Rugby School Memorial.

For the Rugby School War Memorial £50,000 has been subscribed. The first charge upon this fund is the education of sons of fallen Old Rugbeian officers at preparatory schools and subsequently at Rugby. The second object is the erection of a visible memorial on the school grounds.

No final decision has yet been made as to the form which this building will take, but general opinion inclines to (1) a small memorial chapel attached to but not a part of Rugby Chapel, and connected with it by a cloister; and (2) a memorial cross at the cross-roads outside New Big School. These projects are now being considered by committees of the fund. When these two objects have been fully provided, it is proposed to draw upon any balance that may be left for the educational assistance of sons of Old Rugbeians who have suffered financially by reason of the War.

### Edinburgh Chair of Humanity.

The delegates who will elect to the Chair of Humanity at Edinburgh University, vacant by the death of Prof. Hardie, have now been appointed as follows:—By the Curators of the University—the Lord Provost and Principal Sir James Alfred Ewing; by the Judges of the Court of Session—Lord Dundas and Lord Ormisdale; by the Faculty of Advocates—Mr. C. D. Murray, K.C., M.P., Dean of Faculty; and by the Society of Writers to the Signet—Sir George M. Paul, LL.D., W.S., Deputy Keeper of the Signet. The delegates have resolved that applications from candidates and relative testimonials should be received up to Saturday, May 3. These are to be lodged with the Secretary of the Curators of the University, A. B. Fleming, W.S., 4 Albyn Place, Edinburgh.

### New Principal of St. Hilda's Hall.

The Council of St. Hilda's Hall, Oxford, have appointed Miss Winifred H. Moberly, sometime scholar and afterwards bursar of Lady Margaret Hall, Oxford, to be Principal of St. Hilda's Hall.

### Secretary of Armstrong College.

Mr. F. H. Pruen, Secretary to the Armstrong College, has resigned his post, which he has held since 1899.

## BLUE BOOK SUMMARY.

### Schemes under the Act.

The Board of Education have issued a most important memorandum (Circular 1096), under the title "Draft Suggestions for the Arrangement of Schemes under the Education Act, 1918."

In the prefatory note it is explained that the Memorandum is intended to indicate the Board's conception of the duty which has been laid upon Local Authorities by the new Act. This, remember, is in itself something of an innovation. In form, parts of the Act are optional, but since the schemes must be approved by the Board before the full grant can be earned, it follows that much depends upon the Board's conception of what an Authority ought properly to attempt. We are reminded that, in the debate upon the second reading of the Bill, the President said that one of its most important purposes was to establish the principle that all forms of education shall be considered as parts of a single whole, and to secure that all Local Education Authorities, so far as their powers extend, shall contribute to the establishment of an adequate national system. A necessary preliminary is that each Authority shall make a comprehensive and systematic survey of the educational needs of its area, and formulate a policy for the progressive development and organization of its own educational provision in relation to national as well as to local needs.

Authorities are warned against taking a short view. They must plan boldly for the future, and look at least ten years ahead, giving at least an outline of the more distant projects, while aiming at details in those to be taken in hand forthwith. In form, the scheme submitted should contain: first, a survey of the educational needs of the area as interpreted by the Authority; second, a summary showing the extent to which the existing provision covers the ground; third, a statement embodying a comparison of these two. This will serve as a kind of guide book for the Authority and its successors. It is important that the policy thus framed should be published as widely as possible in the area, in order that public interest may be aroused and public support obtained. In the introduction to the scheme proper, there should be a brief account of the characteristics of the area and of the chief industries. The extent of the child population, and the number of young persons for whose training the Authority will be responsible should be given, together with a general account of the administrative arrangements, including finance.

The scheme proper should follow in its main lines the plan suggested by the Board, although the emphasis on different topics will vary with the area. It is not expected that details as to school plans and such matters will form part of the scheme, and in regard to other branches, such as the school medical service, supplementary statements may be necessary. The heads suggested by the Board are very comprehensive and include many points which have hitherto been overlooked by Local Authorities, or are likely to be overlooked by negligent Authorities.

### Private Schools and the Act.

Owners of private schools should note that the Board have fixed April 1, 1919, as the appointed day for the application of Section 28 of the Act. Under this section the persons responsible for the conduct of schools and educational institutions in England and Wales are, with certain exceptions, required to send to the Board of Education, Victoria and Albert Museum, South Kensington, S.W.7, before July 1, 1919, the name and address and a short description of the school or institution. The information is not required from schools in receipt of Government grants, but all private schools should supply the particulars required without delay. The responsibility for doing so rests upon the Principal, or, if there is a governing body, upon the Secretary.

## ASSOCIATION NEWS.

### Teachers Registration Council.

At the last meeting of the Council it was announced that up to and including Thursday, March 13, the number of applications for admission to the Register was 25,754. Of this total 8,197 came from teachers in Secondary Schools, while Specialist Teachers numbered 3,170, and teachers working in Elementary Schools 14,016.

The Council is arranging a joint meeting with the Executive of the National Union of Teachers for the purpose of considering certain questions relating to the proposal to establish a National Council for Education on the lines of the Whitley Report.

### The College of Preceptors.

At the meeting of the Council held on the 26th of February it was resolved that the Prime Minister, the President of the Board of Education, and the Minister of Labour be informed that the College of Preceptors desires to see a Joint Educational Council on the lines of the Whitley Report, such Council to consist of a Standing Committee of the House of Commons acting with an equal number of representatives of the Teachers Registration Council. It was further resolved that the principal educational associations be invited to take action in support of that proposal.

Mr. S. T. Shovelton, M.A., was elected a member of the Council.

The Diploma of Fellow was granted to two candidates, that of Licentiate to ten candidates, and that of Associate to fifty-eight candidates, who had satisfied the prescribed conditions.

It was resolved that the Summer Examinations for the Diplomas of Licentiate and Associate be resumed in the year 1920.

Mr. H. G. Abel, M.A., Mr. T. Brine, A.C.P., Mr. C. S. Burke, Mr. F. H. Doughty, A.C.P., and Mr. C. W. Everett, A.C.P., were elected members of the College.

### British Psychological Society.

At a Special General Meeting of the British Psychological Society, held in London on February 19 last, it was unanimously resolved that persons interested (instead of, as heretofore, engaged) in the various branches of psychology shall be eligible for membership. It was also decided to institute three special sections of the Society, devoted to the educational, industrial, and medical aspects of psychology respectively. Further particulars may be obtained from the Hon. Secretary of the British Psychological Society, The Psychological Laboratory, University College, W.C.1.

### The Regional Association

are organizing a vacation meeting for regional and civic study at Malvern, April 9 to 16. All further particulars can be obtained from the Hon. Sec., George Morris, 7 West Road, Saffron Walden.

### The Secondary, Technical, and University Teachers' Insurance Society.

*To the Editor of "The Educational Times."*

DEAR SIR,—May we ask the favour of space in your columns to inform those of your readers who are under the Regulations of the National Health Insurance Act that, now the new Superannuation Act has come into force, they can retain their membership in their Approved Societies by becoming Voluntary Contributors. Even those members who are in receipt of a salary exceeding £160 per annum can, if qualified by two years' membership, remain eligible for sickness or disablement benefits by payment of reduced weekly contributions. We would strongly urge your readers to write to their Societies for full details.—Yours faithfully,

J. D. McCLURE, Chairman.

HENRIETTA BUSK, Vice-Chairman.

# SUPPLEMENT.

## THE NEW BOLTON SCHOOL.

ON the following pages of this supplement will be found reproductions of the drawings prepared by Mr. Charles T. Adshead, A.R.I.B.A., in the competition for a design for the new buildings of the Bolton School. These drawings were awarded the first premium, and it is understood that the building will be erected as soon as circumstances permit.

The Bolton School has benefited greatly by the munificence of Lord Leverhulme—formerly Mr. William H. Lever, a native of Bolton and a namesake of the founder of the Bolton Grammar School, an ancient institution which numbered among its former masters Lemprière, of Classical Dictionary fame. Some years ago Lord Leverhulme became its second founder, causing it to be transferred from its ancient home near the Collegiate Church to a set of adapted houses on Chorley New Road. At the same time Lord Leverhulme provided a substantial endowment and extensive playing fields. Arrangements were also made for including in the foundation the Girls' High School, a comparatively modern institution.

Henceforward the Bolton School will include departments for boys and girls, and the plans show an arrangement of two quadrangles with a chapel. The school will thus be co-educational, but will not be conducted as a "mixed" school, since each department will be carried on under its own head.

The Trustees and Lord Leverhulme stipulated that the buildings were to form one block and be a striking and imposing group, designed in the Elizabethan or Tudor style of architecture. They were to be faced with Runcorn or other similar red-coloured sandstone. The chapel is to provide seating accommodation for 1,000, with space for an organ and accessories.

Central heating is to be made available for both schools, with an extension for swimming baths. The school heating is to be by hot water; open fireplaces to be subsidiary only. A coal lift is to be accessible at each floor, and the building is to be lighted throughout with electricity, which will also be used to work a vacuum cleaning installation. Both schools are to have separate entrances for seniors and juniors, with a covered part for early comers. On the main floor of each school is an assembly hall to seat 500, with a gallery and a platform, the latter being available as a stage with retiring rooms for performers. The classrooms are to be so arranged as to get as much sun as possible, to have good cupboard space and an open fireplace in each room. One classroom for thirty-five pupils, thirteen classrooms for twenty-five pupils, and twelve classrooms for twenty pupils. Each school is to have a dining hall for 200, with kitchen and store rooms.

The Girls' Department will have a complete equipment for science teaching, made up of an elementary science laboratory for twenty-five pupils, an elementary chemistry laboratory for twenty-five, with balance-room adjoining, a botanical laboratory for twenty-five, with greenhouse. There will be two senior laboratories, each for ten pupils, and two science lecture-rooms adjoining the laboratories.

The art-room for fifty pupils, housecraft department for seventy-five, and cookery-room near the kitchen, with a laundry added, will be important features. The staff-rooms will include rooms for the head mistress, secretary, doctor, and two common rooms for teachers. There will also be a library with alcoves formed by the fittings, and a reading-room added; music-rooms and practice-rooms, gymnasium with changing-rooms, and a large play-room. An assembly and orderly room are provided for Girl Guides. As showing the care for detail, it may be mentioned that two small rooms are to be available for arranging flowers.

In the Boys' Department the general arrangements will resemble those for the girls, save that provision is made for teaching physics instead of botany, and handicraft instead of domestic subjects. In place of the room for Girl Guides there are an orderly room and armoury, with commandant's office for the Cadet Corps, and accommodation for a Scout Troop, with a room divisible into four small ones for instruction purposes. The playing-fields are already very extensive and will continue to be available, as they are part of Lord Leverhulme's first gift to the school.

It will be seen that, so far as buildings and equipment can make a school, the Bolton School promises to be one of the finest in the country. Some of the architectural journals are disposed to complain of the limitation imposed by the Trustees and Lord Leverhulme in stipulating for a building in the Elizabethan or Tudor style. For our part we think that the result achieved by Mr. Adshead fully justifies their action. The front elevation, with its gate-tower and series of charming oriel windows, recalls the best tradition of college building in England. Carried out in the dark red sandstone which we associate with Chester Cathedral, the finished edifice will be a piece of beautiful work, likely to have a lasting influence on the pupils and certain to be an object of civic pride. Compared with some of our lamentable examples of school architecture produced under Local Authorities the Bolton School building is in itself an educational factor of great power, a fitting centre where honourable traditions may develop—an appropriate home for humane learning no less than for practical studies.

## ASSOCIATION OF TECHNICAL INSTITUTIONS.

### ANNUAL GENERAL MEETING.

There was a very good attendance of members at the Clothworkers' Hall on Friday, February 21, when Sir Alfred Keogh presided for the last time at the Annual General Meeting of the Association of Technical Institutions. Sir Alfred has occupied the post of President of the Association since the beginning of the War, thereby creating a new record, for no previous president has ever held office for more than a year. His last duty was to install as his successor in office Lord Sydenham, who brings with him a distinguished record as an educationist, even if he has had no intimate experience of the work of technical institutions. As he reminded his audience, he has been a lecturer in a large engineering college, and he has served as Chancellor of two Universities, Bombay and Melbourne, besides being member of the Senate of a third University. He took as the subject of his Presidential Address, "The Functions of Government in relation to Industry." His references to education were not copious, and call for no comment; but Mr. Dan Irving, the Socialist Member of Parliament for Burnley, was observed to be taking careful notes of some of the remarks of his Lordship on such questions as the relations of Government to industry, private enterprise, and State trading. If opportunity had offered for Mr. Irving to give expression to his views on these subjects, the subsequent proceedings would, no doubt, have been characterized by "a certain liveliness."

Apart from formal matters, the real business of the meeting began with three papers on "Works Schools." Prof. J. Eustice described, in some detail, the scheme in operation at the Austin Motor Company's Works, where he served as the first "Technical Director"; Mr. R. W. Ferguson spoke generally on the advantages and opportunities of works schools, though much of what he said was no doubt inspired by his experience at the Works School at Bournville, of which he is the educational organizer. Mr. Maxwell Garnett, Principal of the Manchester College of Technology, was enthusiastic about a works school near Manchester, "self-governed, for all the world like Rugby or Winchester," and elaborated his views as to what should constitute the curriculum of a works school. The writers of the papers failed, however, to convince many of the audience of the desirability of works schools as a general policy. The undoubted fact that a few enlightened firms have organized such schools upon excellent lines should not blind educationists to the obvious dangers and abuses which would result from any general extension of the movement.

The most useful and stimulating paper of the meeting was that read by Mr. H. Schofield, Principal of the Loughborough Technical School, on "Technical Education and its relation to the Engineering Industry." Mr. Schofield is embarking on an experiment in engineering education which will be watched with very great interest. During the war a large instructional factory was erected at Loughborough in connexion with the technical college, and devoted to the training of munition workers on a productive basis. The work was entirely self-supporting; contracts for work were accepted and carried out completely. The head of the engineering department of the college acted as works manager, and the trainees, some five hundred in number, worked on the contracts while carrying on their training. This instructional factory is now being retained, and work in it will form an integral part of the training of engineers at the technical college. Thus they will be able to combine a theoretical and a workshop training on commercial lines in the same institute. This method has been tried with considerable success in America, but the experiment at Loughborough will be the first of its kind in this country.

Mr. Schofield put forward a number of practical suggestions as a result of the experience gained during the War. He urged that in view of the present tendency to specialization on repetition work in many large firms, it will only be possible for engineering apprentices to gain their all-round knowledge under the guidance of an approved day technical college engineering department, organized so as to run pro-

ductively. "Broadly, we should give more satisfaction to the industry if we organized definitely for trade classes, giving actual works experience on the one hand, and confining organized courses of systematic study in mechanical and electrical engineering, and the like, to those preferential apprentices in the works where previous education justifies such a course of study." Mr. Schofield also made a strong plea for the urgent necessity of providing adequate modern equipment in technical colleges, and, further, of keeping it up to date. This will, no doubt, be an expensive business, but as a rule the equipment of technical schools before the War was often lamentably antiquated, and was the origin of much of the contempt in which these schools were frequently held by industry. Those which undertook munition work received some excellent machinery of most modern type from the Ministry of Munitions, and if they are allowed to retain this they will be well equipped for a few years. The great problem will be how to replace this machinery when, in its turn, it becomes obsolete.

The Saturday morning session was devoted chiefly to the discussion of resolutions prepared by the Council. Principal Hudson, of Huddersfield, led off with a series of motions relating to the training of teachers for day continuation schools. The chief of these were:—

(1) That extra courses should be provided at some of the training colleges for intending day continuation school teachers.

(2) That the technical schools (including agricultural colleges) should provide a training department for certain types of specialist teachers.

The first of these received little notice in the discussion which followed, though it was pointed out that the existing training colleges are already overtaxed to train teachers for elementary schools, and in any case they are not the right type of institutions to provide the training required. The second resolution roused the apprehension of Prof. Wertheimer, who had visions of technical schools of all sorts and types all over the country setting up training departments. Eventually his fears, and those of others, were in part placated by the insertion of the word "approved" before "technical schools," and substituting "course of training" for "a training department." It was evident, however, that the problem had not been thought out clearly by the Council, and malcontents were appeased by a promise that the Council would consider the whole scheme in detail, and bring it up again at a subsequent meeting.

The perennial question of junior technical schools was discussed once more on a resolution by Principal Small, of Bootle, advising Local Education Authorities, in framing schemes, to ensure that provision is made for a suitable number of these schools. The discussion was on the usual lines, members being indignant at the failure of the Board to amend their regulations and to make provision for junior commercial schools.

Impeccable resolutions were passed on the position of natural science in the educational system of Great Britain, on the intensive study of modern languages, and on grace terms for teachers in technical institutions, and finally the business was concluded by the appointment of a Sub-Committee to deal with superannuation business.

The new Chairman of Council is Major Robert Mitchell, C.B.E., Principal of the Regent Street Polytechnic, while the new Vice-Chairman is Mr. Dan Irving, M.P. Mr. F. Wilkinson was re-elected Hon. Secretary, and the following were appointed to fill vacancies on the Council:—Mr. C. B. Bragg (Birmingham), Sir Lulham Pound (City of London College), Mr. A. Taylor (Halifax), Principal T. Luxton (Hull), and Principal B. Prentice (Salford). P. A.

MR. E. MOND'S GIFT TO CAMBRIDGE. — Our Cambridge correspondent states that the Council of the Senate of the University recommend that the generous offer of Mr. Emilo Mond of the sum of £20,000 for the purpose of the establishment of a Francis Mond Professorship of Aeronautical Engineering be accepted with grateful thanks. Lieutenant Mond was killed in action whilst flying on the Western front. The proposal is viewed with favour by the Air Ministry.

## LETTERS TO THE EDITOR.

## Eurhythmics.

To the Editor of "The Educational Times."

SIR,—The article on Eurhythmics signed "Musicus," in your issue of January, tempts me to offer the following remarks:—

In these times of plain speaking and "no secret treaties" is it not a pity to use an anonymous name, especially when playing the part of critic? If "Musicus" moves in artistic circles he will agree that too often artists have been most unjustly handled by critics hiding behind some pseudonym.

I will now take some of his points.

1. *Has every principal who professes to adopt it examined it critically, or does he or she introduce it into the prospectus with the desire of appearing up to date?*

Admitting this were so, is it a fault? Or should we pray on our bended knees for a generation of principals firmly attached to Early Victorian or Georgian ideals? Which kind of hotel does "Musicus" patronize—the up-to-date kind or the Bloomsbury kind?

2. *Is it not the case that the reason why so much fine music is unappreciated by the masses is because they will try to nod their heads or move their feet to it, and when they find that they cannot make their movements square with the music, are thereupon disappointed, and become apathetic?*

Is this not a very good argument for Eurhythmics?

When one has sufficiently developed one's mathematical faculties, I take it that, from that moment, one is free and ceases to count on one's fingers?

3. *As a "side-show," M. Dalcroze teaches sight-singing, using the fixed Doh in a peculiar way.*

"Musicus" is quite mistaken. M. Dalcroze does not consider sight-singing a "side-show," but rather a very important adjunct to musical education, and as his principal object is to bring his pupils nearer to Music, to feel it, to understand it, he is very anxious that all should be proficient in this part of his Method.

It also remains to be proved that his method of ear-training is inferior to others.

4. . . . *But even here one may be forgiven for expressing the opinion that it cannot improve the musical taste of the pupils to hear the Fugue or Scherzo played at less than half its proper speed in order to fit in with the prescribed movements.*

On this point I quite agree, and have no hesitation in saying that this sort of thing is a bad mistake, which originated from the misguided zeal of a few "unripe" disciples of the Method. "Musicus" may be sure this is not M. Dalcroze's intention. It is, perhaps, as well to remark here that whatever pardonable or unpardonable exaggerations have been committed must be put down to an excess of enthusiasm of his pupils, rather than to artistic failings on M. Dalcroze's part. But what method has not made mistakes in its youth?

I should also like to repeat what M. Dalcroze has so often and so plainly said about these realizations: that they are not intended as a spectacular production, but as an interesting way for the pupils to study the construction of a composition. Does "Musicus" doubt that children having realized the two or three parts—each in turn—of an Invention, will not play it with greater clearness than those who only hear the "top voice"?

5. *Call it—pace M. Dalcroze—physical exercise and let it take the place of Swedish Drill.*

As one who has studied both Ling's Swedish gymnastics for three years at Stockholm and Eurhythmics at Geneva, I protest with the utmost vigour against the mixing up of these two totally different systems. One might as well say that boxing could replace finger exercises. Ling's system of physical education is unique. It cannot be replaced by any

system as yet invented. It was useful a hundred years ago, it is now a vital need. M. Dalcroze's method begins where Swedish gymnastics end. The great idea of M. Dalcroze is to make the healthy body a perfect instrument of human expression. To use a simile: Ling builds the house, Dalcroze decorates it.

6. *Bodily Rhythm and Musical Rhythm.*

This subject is so vast that it is very difficult to handle it in a few lines; but I venture to suggest that the division of these two Rhythms is a mistake, and, if continued, will lead music even further away from the real path. History teaches us that these two elements have ever been closely associated—in fact, were to all purposes one. We know, for instance, that to the ancient Greeks music meant the united arts of Declamation, Gesture, and Music, and that the common name for this trinity of modes of expression was "the Dance." Have we gained so much by separating these arts? Is not the modern virtuoso a horrible example of what the result of one over-developed faculty is? Here is an illustration of Musical Rhythm without Bodily Rhythm with a vengeance! Are we to be satisfied with that, or shall we admit that the ancients were wiser than we? In this way "Musicus" passes by one of M. Dalcroze's most important ideals: the return to real and natural music.

Nagot, the French critic, wrote: "Le mouvement est l'âme de la Musique aussi voyons-nous que les anciens la jugeaient absolument nécessaire à leurs déclamations."

Let not "Musicus" be anxious. The "intricate bodily movements" will never rival or reach the demoniacal heights of "abnormal digital or vocal dexterity" such as are advocated in modern Schools of Music.

7. "Musicus," I fear, has sadly missed the point about improvisation in M. Dalcroze's Method. Here, again, it is not a show thing or a concert production that is aimed at, but rather a way of "getting at" a pupil's personality and developing his or her power of expression.

M. Dalcroze found that music students, all the world over, were over-fed on other people's music, and were never given any encouragement to express their own. He also found that attempts at expressing this "personal music," no matter how crude, had a beneficial effect. If one really wishes to understand an art, painting for instance, there is nothing like trying to use the brush oneself; then one suddenly perceives a great many details that one never even dreamt of before. La Mièvre said: "Inventes, tu viveras."

It is this principle that causes a child to prefer the doll she has made out of an old cushion to the finished article from the shop. I believe that this is one of the great virtues of M. Dalcroze's Method—that it leaves room for and encourages personal expression. May I suggest that "Musicus," when criticizing Eurhythmics, should try to see the inner pedagogical aim of certain exercises, rather than the outside unimportant effect, and let him not be afraid: no pupil that I have ever met was sufficiently vain or free from that universal curse, self-consciousness, to think that his or her efforts were perfect. Quite the contrary: it is quite a triumph to induce them even to try to improvise.

To bring this letter to a close, I may say that I am quite of the same opinion as "Musicus" when he speaks of "uncritical enthusiasts" of the Method. Like many others, M. Dalcroze has to exclaim, "Save me from my friends." Let us all remember that the final aim is not the means of this or that Method, but the glorification of Art for all everywhere.

If a better Method than M. Dalcroze's is found, so much the better! The great thing is to advance. I am quite sure M. Dalcroze is of that opinion.

D. J. VAN SCHNELL,

Diplômé of the Royal Gymnastic Institute, Stockholm, Certificated Teacher of Dalcroze Eurhythmics.

29 High Street, Notting Hill Gate, W.11.

February, 1919.

# M<sup>c</sup>DOUGALL'S NEW BOOKS.

MCDUGALL'S **ATLASES** Bound in Stiff Boards. Revised to Date.

**M<sup>c</sup>DOUGALL'S "SCHOOL" ATLAS** contains 22 Coloured Maps, 16 Photo Relief Physical Maps, and 14 Diagrams. The Best Teaching Atlas published. In Stiff Boards, Cloth Back, 1s. net. With Index, 1s. 2d. net. Cloth Boards, 1s. 6d. net.

THE PHOTO-RELIEF MAPS ARE OPPOSITE THE CORRESPONDING COLOURED (POLITICAL) MAPS. EVERY MAP IS RIGHT UP TO DATE.

SIMILAR MAPS ARE GIVEN IN

**M<sup>c</sup>DOUGALL'S JUNIOR ATLAS.** It contains 16 Coloured (Political) Maps and 4 Photo-Relief (Physical) Maps. The Cheapest Atlas issued. In Stiff Boards, 8d. net. In Stout Paper Cover, 6d. net.

## CONTOUR ATLAS OF THE BRITISH ISLES.

The Contour Maps of the various countries have insets showing the various counties. All the Maps have Political features imposed on the Contours. The sectional maps give full details.

CONTENTS: Europe—Two-Page Map of the North Sea Lands and their relations to the British Isles. Two-Page Map England. England, Page Map each of Northern, South-Western, and South-Eastern Divisions. Plans of chief English Towns. Two-Page Map Scotland. Two-Page Map Central Scotland, Ireland. Four Maps, giving Winter and Summer Temperatures, Rainfall, Vegetation, Commercial Map. In Stiff Boards, 8d. net. In Stout Paper, 6d. net.

## GATEWAYS TO BOOKLAND.

A NEW SERIES OF LITERATURE BOOKS OF SUPREME EXCELLENCE.

In the lower books the tales, folk-lore stories, &c., are retold in simple language; in the upper books unaltered passages from the great authors are used, and among these are long selections of sustained interest.

Every lesson has a real literary value, and every lesson has a real interest for the pupil.

| 3. WINGED FLIGHTS INTO STORY LAND ... | 2s. 4d. | 6. IN KINGS' GARDENS ... | 3s. 0d. |

REASONS WHY YOU SHOULD USE THESE READERS.

1. They are the most modern. The type used is that recommended by the British Association.
2. They are up to pre-war standard—the best paper—the finest printing—the strongest binding.
3. They have a large page, and contain more pages of actual reading matter than any similar set of books.
4. Large stocks are on hand. Orders can be executed immediately.

## MCDUGALL'S CONCISE ENGLISH DICTIONARY.

The Best School Dictionary available at a cheap price. Over 15,000 Words, Meanings, Phrases, &c., &c. Strongly bound in Paper Boards, Cloth Back, Rounded Corners, or in Limp Cloth. 224 pages. Each Style, price 9d. net.

## MCDUGALL'S PLAIN-TEXT SHAKESPEARE.

In this edition of English Classics is given the greater plays of Shakespeare unabridged, but carefully edited for schools, and without notes. The books are full crown 8vo in size, most clearly printed, and bound in limp cloth. Price each 6d. net, except Hamlet and Coriolanus. Each 10d. net.

## MCDUGALL'S CONCISE ENGLISH COURSE.

A Handbook of Commercial English. Clear, Concise, Comprehensive. 112 pages. Cloth Boards, 1s. 6d.

## MCDUGALL'S REGIONAL GEOGRAPHY of the WORLD

A Modern Scientific Treatment. Contains an abundance of Contour Maps, in Colour and Black and White, with many diagrams. A section of questions based on the text is a very valuable feature. Revised to date. 224 pages. Cloth Covers. 2s. net.

## MCDUGALL'S EARTH KNOWLEDGE HANDBOOKS.

A New Series of Regional, Rational, and Practical Geographies. With many Maps, Diagrams, and Illustrations. Arranged for the use of pupils from 8 to 16 years of age. Detailed prospectus on application.

1. First Notions, &c., 6d. 2. The British Isles (briefly), 6d. 3. Europe, America, Africa, Australasia, 9d. 4. Asia, British Isles, 9d. 5. Europe, 9d. 6. The Empire, 9d. 7. England and Wales, 9d. 8. Scotland, 9d. Just out—The British Isles, 10d. net.

## MCDUGALL'S ROLL OF HONOUR. A Handsome Design printed in six colours.

With space for 80 Names. Unmounted, 3s., by post, 3s. 6d. Framed, 30s. net.

ALL PARTICULARS ON APPLICATION TO

**McDougal's Educational Co., Ltd.** 8 FARRINGDON AVENUE, LONDON, E.O.4, AND EDINBURGH.

## LITERARY SECTION.

## BOOKS AND THE MAN.

## Concerning Textbooks.

TEXTBOOKS are to the living voice of the teacher as a supplement or a substitute, and as the wise teacher never tries to say everything, but regards lectures and lessons as condiments or stimulants rather than a complete diet, so the good textbook gives appetite for knowledge and leaves the rest to the learner's own effort in the way of research or in the study of the larger and more exhaustive treatise. The distinction here hinted at between the textbook and the treatise should be carefully noted, for many otherwise excellent manuals fail because they are neither the one nor the other. A textbook proper leads us through the wood without compelling us to pause and examine every tree. The bad textbook keeps us dawdling around the trees, so that we never see the wood. The worst textbooks are written by those who wish to explain everything from the very beginning, forgetting that nothing can be fully explained, save in the light of knowledge. A better plan is to offer a bird's-eye view of the course, as was done by Huxley in the opening chapter of one of the best and most successful textbooks ever written. Such a preliminary survey may be referred to with profit again and again as we progress through the book, for it helps us to keep a right perspective and to see accurately where we are in the subject.

In the main part of the book the successive sections and chapters should aim definitely at supplying answers to questions. Not to such questions as are set in examinations, be it noted, but to such as must be asked by any intelligent student or propounded by any skilful teacher as an incentive and guide to profitable study. From this point of view the term "textbook" is misleading, recalling, as it does, the time when the textbook was the dominating factor in teaching and the teacher was no more than an exponent of its authoritative statements. His business was to make the textbook plain and to see that his pupils knew what it contained, a duty which has often reduced teaching to a "dull mechanick art." Of late years there has been a reaction against this idolatry of the textbook. Bacon somewhere reminds us that "there is a superstition in avoiding superstition," and this truth has been illustrated by some reformers who would dispense with the textbook altogether and lead their pupils to make one of their own. This ambitious project frequently ends in the teacher compiling a textbook which the pupils copy out with a pathetic fidelity, justified only in the comparatively rare cases where the teacher's laborious efforts have produced something at once unique and excellent.

It has recently been suggested that the various "subject societies," such as the English, Modern Languages, and Historical Associations, should each endeavour to determine the text and form of a standard book on their subjects. The Classical Association has arrived at an agreed terminology, but this is a comparatively easy task. A standard textbook will not be compiled without a vast deal of preliminary and acrimonious discussion, and when, if ever, it finally sees the light, it will probably be nothing better than a weak compromise between sharply divided schools of opinion. The tendency will be to omit all disputed points and to be content with the merest skeleton of a book, a volume of dry bones.

The agreed skeleton form would have the great practical value of making it possible for a boy to leave one school and go to another, without, as now, finding himself bewildered by a set of textbooks which approach the subjects from a point of view entirely unfamiliar to him. The essentials should be uniform, although the atmosphere and appurtenances may vary according to the special circumstances of the school.

SILAS BIRCH.

## REVIEWS AND NOTICES.

## Education.

*The New Teaching.* Edited by John Adams.  
(Hodder & Stoughton.)

This is a very useful book, bringing together as it does into a single handsome volume descriptions by experts in their various lines of modern methods in the teaching of nearly all the ordinary school subjects. We have Dr. Adams on English, Mr. de Glehn on Modern Foreign Languages, Dr. Rouse on Classics, Dr. Percy Nunn on Science, Mr. Strachan on Mathematics, Mr. Fairgrieve on Geography, Mr. Keatinge and Mr. Hasluck on History, Dr. Buck and Dr. Borland on Music, Mr. Barrett Carpenter on Drawing and Art, Mr. G. F. Johnson on Handwork, Mr. Guy Campbell and Miss Spalding on Physical Training, Miss Marsden on Domestic Subjects, and Mr. Fred Charles on Commercial Subjects.

The scope of the book is carefully limited. "We are concerned," says the editor, "with the teaching of the various subjects in the school curriculum, and we may fairly claim to be excused from discussing the educational value of the different studies. . . . The purpose of the writers is to give as full and as accurate a statement as they can of the actual conditions under which instruction is given in the subjects they have undertaken to treat." Thus the reader will not expect any discussion of fundamentals, of the philosophy of education in relation to life—though, as a matter of fact he will get glimpses of it here and there. The influence of the war on educational ideals, for example, simply does not come in, except in an allusion to the increased cost of paper and printing.

This is quite as it should be, for the book is concerned primarily with method, and the writers are not youthful idealists but tough old practitioners with plenty of experience behind them. Their average age can hardly be less than fifty, and they might be collectively the parents of all the contributors to "Georgian Poetry." Anyhow, their book is evidence that, in a profession in which more almost than any other increasing years bring increasing staleness, there are some who after a life spent in teaching are still busily learning.

You may well ask the question, Is there a "new teaching," and if so what is it? Does the title justify itself? The editor claims that it does, and an attentive reader who has reached the end of the book will incline to agree with him that a certain unity of purpose underlies the modern developments in all these different subjects. It may be put somewhat as follows:—There was an "old teaching," according to which the pupil did the work as by rule established, and the master stood by with the ruler. That was how things were when our authors were themselves at school. Shall we or shall we not say that they are a good advertisement of its results? Then there was a "middle teaching," the period it may be of our authors' early enthusiasms and mistakes, when the master did the work and the boy condescended, it was hoped, to be "interested." In the "new teaching" master and pupil both work, and the work of the master is directed to calling forth the spontaneous energies of the pupil. The question is, How are you to do it? and that is the question this book is designed to answer.

We have no space to deal with the essays individually. Every reader will turn first to his own subjects, but he should not stop there, for several of the essays have a more than merely professional interest. The present writer, for instance, has never taught mathematics and is never likely to, but he was quite fascinated by Mr. Strachan's essay and his criticism of Euclid, and the "new" and the "newer" geometry. Dr. Rouse tells over again the story of his achievement, and it is one of the most inspiring things in the whole history of modern education. Perhaps the most finished and scholarly work in the book is Dr. Buck's short article on Music. Mr. Hasluck is much exercised in his mind by the dangers of partisanship in Modern History teaching, and propounds a somewhat cumbersome method by which the evils of partisanship may be minimized

## RECENT PUBLICATIONS

**The Port-Royalists on Education.** Extracts from the Educational Writings of the Port-Royalists. Selected, translated, and furnished with an introduction and notes, by H. C. BARNARD, M.A., B.Litt., sometime Senior Hulme Scholar of Brasenose College, Oxford; Author of *The Little Schools of Port-Royal, &c.* Crown 8vo. 7s 6d net

"Mr Barnard in his *Little Schools of Port Royal* gave us a critical and scholarly examination of the labours of the Port Royalist Educators. In this companion volume he renders accessible a series of extracts, translated into English, derived from the writings of the Solitaires. The reader will be able as at first hand, together from these a satisfactory knowledge of the theories, methods and practices associated more particularly with the Little Schools. Much of this will be found to have a value in connection with modern teaching."—*Education*

**A Treatise on Plane Trigonometry.** By E. W. HOBSON, Sc.D., F.R.S., Sadleirian Professor of Pure Mathematics, Cambridge. Fourth edition. Demy 8vo. 12s 6d net

"There was a time when Professor Hobson's volume was the only British textbook in which the higher portions of the subject were adequately treated. Even now it has no serious rival, for although later works on higher analysis contain many chapters overlapping the ground covered by the latter half of this volume, we believe that 'Hobson' will continue to be the favourite textbook for those who wish to carry the subject beyond a merely elementary course."—*The Mathematical Gazette* on the Third Edition

**Matrices and Determinoids.** By C. E. CULLIS, M.A., Ph.D., Harding Professor of Higher Mathematics in the University of Calcutta. Volume II. Royal 8vo. 42s net

CONTENTS: Compound Matrices: Relations between the Elements and Minor Determinants of a Matrix: Some Properties of Square Matrices; Ranks of Matrix Products and Matrix Factors; Equigradient Transformations of a Matrix whose Elements are Constants; Some Matrix Equations of the Second Degree; The Extravagances of Matrices and of Spacellets in Homogeneous Space; The Paratomy and Orthotomy of Two Matrices and of Two Spacellets of Homogeneous Space.

**Dynamical Astronomy.** An Introductory Treatise. By H. C. PLUMMER, M.A., Andrews Professor of Astronomy in the University of Dublin, and Royal Astronomer of Ireland. With 8 text-figures. Large royal 8vo. 18s net

"There has long been a need for a general book on celestial mechanics on a smaller scale and at a more accessible price than the standard work of Tisserand, and Prof. Plummer's recent publication is a very successful effort to satisfy that need. It is so concisely written that a most remarkable amount of material is made available within a limited space."—*Nature*

**The Theory of Electricity.** By G. H. LIVENS, M.A., Lecturer in Mathematics in the University of Sheffield. With 104 text-figures. Large royal 8vo. 30s net

"Offered as a general textbook on the mathematical aspects of modern electrical theory, this work is a successful attempt to present the subject in a consistent form. . . . It may be said, without fear of contradiction, that this work is one of the most valuable of recent contributions to electrical literature."—*The Electrical Times*

**Recent Discoveries in Inorganic Chemistry.** By J. HART-SMITH, A.R.C.S., F.I.C. Demy 8vo. 4s 6d net

An account of the more important discoveries in Inorganic Chemistry within the last fifteen years so far as they concern the subject as usually taught in schools. The book is not intended to be a textbook but is rather to be regarded as a supplement to existing textbooks.

**Agriculture and the Land,** with some account of Building Societies, Garden Cities, our Water Supply and Internal Communication. By GEORGE F. BOSWORTH, F.R.G.S. With 30 maps and illustrations. Crown 8vo. 2s

"An excellent little treatise with illustrations which are exceptionally well chosen. . . . It contains an admirably summarized sketch of the development of our most ancient industry written from a current and practical point of view."—*The Globe*

**The Cambridge University Calendar for the Year 1918-1919.** Crown 8vo. 10s 6d net

**Cambridge Readings in Literature.**

A Series of Anthologies from Homer to Masfield. Illustrated with reproductions of pictures by great masters, from Botticelli to William Orpen. Edited by GEORGE SAMPSON. In five books. Crown 8vo. In three styles of binding, viz.: Cloth boards, uncut edges, with bookmarker; Cloth limp; and Cloth flush. Books I, II, III, 5s net, 4s 3d net, and 3s 6d net, each, respectively, according to binding. Books IV and V, 6s net, 5s net, and 4s net

"The passages of good literature which Mr Sampson has included make up volumes that to the adult reader will be delightful companions, and in the adult and the adolescent alike will stir the passion to read more and more."—*The Times*

**The Story of Doctor Johnson.** Being an Introduction to Boswell's *Life*. By S. C. ROBERTS, M.A., sometime Scholar of Pembroke College, Cambridge. With a frontispiece and 15 plates. Crown 8vo. 4s 6d net

"This well-printed and pleasantly illustrated book has the sub-title 'Being an Introduction to Boswell's Life'; but it is in no sense a *résumé* of Boswell, but a book which will certainly make Boswell's great work easier to comprehend for young readers. . . . Mr Roberts arranges his material on a clear system. . . . In a comparatively few pages Mr Roberts manages to get in a great many well-known sayings of the great man; and the result is a lively biography which ought to serve its purpose with success."—*The Times Educational Supplement*

**Translation from French.** By R. L. G. RITCHIE, M.A., Lecturer in French in the University of Edinburgh, and JAMES M. MOORE, M.A., Rector of the Madras College, St. Andrews. Demy 8vo. 6s 6d net

"A book which is clear, helpful, and a pleasure to read and work through. We say, 'work through,' because the most valuable part is certainly that section which consists of models, or specimens of how fine translation should be carried out. It is in these passages, so carefully and delicately handled, that the science and art of the authors is most evident. . . . This, in short, is a very good book, and it should be bought."—*The Times*

**A Manual of French Composition.** By the same Authors. Demy 8vo. 5s net

"The outstanding feature . . . is the Model Lessons. . . . These are of high merit, and deserve the closest attention. . . . The work is highly stimulating, and shows how the study of a modern language may give that mental discipline which was formerly supposed to be the province of the ancient classics."—*Modern Language Teaching*

**Selections from Sainte-Beuve.** Edited by ARTHUR TILLEY, M.A., Fellow and Lecturer of King's College, Cambridge. Crown 8vo. 6s net

CONTENTS:—Introduction.—MOLIERE, 1835. Portraits Littéraires, II—From *Du Génie Critique et de Bayle*, 1835. Portraits Littéraires, I—MONTAIGNE, 1842. Port Royal, II—Mme GROFFRIN, 1850. FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

But surely the evils are somewhat imaginary. The bias of one teacher will be corrected by the bias of another. And, quite apart from that, one of the most important lessons that the young can learn from history is that there is a right and a wrong in the conduct of states as well as of individuals, and the teacher who feels strongly, whose attitude is political rather than antiquarian, is the teacher best qualified to drive home this lesson.

One final suggestion we have to make, and it is made in no cynical spirit. What a contrast there is between the schoolmaster's account of his work and the schoolboy's—between "The New Teaching" and "The Loom of Youth"! Possibly Mr. Waugh was taught on the old lines; none of his teachers seem to have contributed to this book. But what, after all, do the "New Taught" think about it all? Would it be possible for each of the contributors to this book to pick out one of their best pupils—he need not of course still be at school—and get him to write his impressions? Thus we might get a companion volume of surpassing interest. Dr. Adams might still retain the editorial chair and I quite seriously beg him to consider the idea. I myself have been a schoolmaster, and my old pupils taught me more of my art than did any of my colleagues.

S.

*Experimental Education.* By R. R. Rusk.  
(7s. 6d. net. Longmans.)

With pardonable pride Dr. Rusk begins his Preface: "Two editions of two impressions each of his 'Introduction to Experimental Education' being exhausted." The result is a volume that has been to a great extent rewritten. The new format is hardly so pleasing as the old. The print is smaller, but not unpleasantly small, and there is the compensation that the matter has been greatly increased. I should say the book contains one and a half times as much as the old. All the former chapters have been improved, and certain entirely fresh matter provided. I am delighted to find that Dr. Rusk has turned his attention to the fundamentally important subject of the actual process of learning. For the past few years serious study has been given to this subject, to the very great advantage of pupils. Perhaps the best result of that important change in the point of view indicated by Dr. Stanley Hall's atrocious word *paidocentric*, is in the attention it has directed to the actual processes that go on in the experience of the pupil while learning. To this matter Dr. Rusk has made a valuable contribution in this new edition. For it is to be noted that this is not a mere compilation. Dr. Rusk has himself taken an honourable part in the investigations that have made it possible to write a book on experimental education at all. He is to be congratulated on his success in producing this up-to-date exposition, and English teachers are to be congratulated on having this important subject brought so easily within their reach. To many of us it will be a perfect joy to know that we have at the tip of our pen the title of a book to recommend without further thought to the numerous inquirers after a really useful modern treatment of experimental education.

J. A.

*Ancient Indian Education.* By F. E. Keay.  
(4s. 6d. net. Oxford University Press.)

This little volume is a very welcome addition to our educational library. With the exception of a few scrappy notes in various encyclopedias and general histories of education, we have nothing in English on the education of India. It is highly desirable, therefore, that this subject should be taken up in order that our present educators in India and at home may have the necessary background against which to project their ideas for the development of education of the races in our Eastern empire. Mr. Keay has done his work in a thorough scholarly way. Knowing the country at first hand, and being familiar with some of its languages, he has had exceptional opportunities, of which he has skillfully availed himself, of obtaining matter and sifting it. The result is highly satisfactory. The book is well documented, and will prove not only valuable as a pioneer con-

tribution, but will encourage further development of a very difficult subject.

*Public School Christianity.* By E. D. Duggan.  
(1s. net. S.P.C.K.)

This well printed pamphlet of sixty-one pages deals with the dangerous subject of religious teaching in the public schools. Mr. Duggan shows up the limits of games morality, the futility of much of the present divinity and chapel work, and pleads for real religious teaching, even if it involves denominational "sides" in school. He appears to have little sympathy with the clerical schoolmaster. He does not want a man who is parson first and schoolmaster as only a poor second.

*Concentration and Character Building.* By Dorothy Grenside.  
(2s. 6d. net. G. Bell.)

This little paper-covered book of 140 pages contains "a synthesis of lectures given at the small Queen's Hall, London, during 1917 and 1918." It belongs to the Christian Science type, though the author works on quite independent lines. Will power is the keynote. "I am what I will" is the text of the whole book. But the author does not confine herself to an exposition of her views; she proceeds to give examples and to prescribe exercises. In fact, she lays down a regular year's course of exercises—the first six months being devoted to mental concentration and the second six months to a definite course of training in character building. The first course is reminiscent of Pelmanism, and is perhaps none the worse for that. In any case, the exercises are ingenious and useful, if only the reader has the pluck to stick to them. If he has not, then he merely proves the theory of the author that the reader is only what he will. The character-building exercises are not quite so definite as the others, probably from the very nature of the case. But they, too, are ingenious. It may be safely said that anyone who has the grit to work his way right through the year's course will be a much better man at the end of it.

*The Church School of Citizenship.* By Allan Hoben.  
(£1 net. University of Chicago Press.)

This is one of the series of books on "Principles and Methods of Religious Education." Its purpose is to correlate religious instruction with instruction in civics. The idea is to permeate civic interests with religious feeling. Each church is to take up the general question of citizenship from the religious standpoint in such a way as to infuse the right spirit into it, without involving anything in the way of denominational feeling. The solidarity of the church is assumed to the extent that a common element is present in all denominations and that this element is of the very essence of civic ideals. The book has separate chapters for the treatment of the civics for childhood, for adolescence, for later adolescence, for the rural church schools, and for adults. The plan is good, and for those who are willing to make such an experiment the way is prepared with much skill.

*The Training of M.D. Children.* By Margaret Macdowall.  
(3s. 6d. net. Local Government Press Co.)

This is a book that makes the normal man teacher very uncomfortable. It is a record of self-sacrifice that is hard for a man to understand. The author herself in her last chapter feels apologetic, and tells us that her pages "appear one-sided. It is seemingly all give, give, give on the part of the teacher, that through her or his gifts the mind of the child may live and grow." This way of regarding the book is forced on the reader by the peculiarly personal nature of its contents. It describes the methods of one particularly able and successful teacher in dealing with children who are really defective, but merely backward. The author writes in an intimate friendly way, giving her own experience and making no pretence to a systematic treatment of the general subject. All manner of references are given to standard authorities, but the special value of the book lies in its indi-

(Continued on page 104.)

A  
**TEXT BOOK OF SEX EDUCATION**

FOR  
**TEACHERS AND PARENTS**

BY  
**WALTER M. GALLICHAN,**  
Author of "THE PSYCHOLOGY OF MARRIAGE."

MR. GALLICHAN, an expert who has made the scientific treatment of this difficult theme his own, here supplies a much wanted book. It is generally admitted that instruction in the sex problem must form a part of any sound educational curriculum in the future. The difficulty hitherto has been the lack of a book in which teachers and parents could find not only an accurate treatment of the subject itself, but practical suggestions as to methods of instruction for children, young persons, and adults. Mr. GALLICHAN has removed that difficulty, and the publishers are confident that this text book will meet with an appreciative reception.

A prominent educationist who read this manuscript says :-

"I regard the book as admirable in its delicacy and in its reverential treatment of a delicate problem. The author's model lessons for young children are not only effective for the purpose designed, but beautiful in presentation and phrasing."

**YORK HOUSE, Portugal St., W.C. 2**

viduality and its inspiration. There are practical hints in abundance for those who are engaged in this kind of work, but for the outsider the book must be regarded as a sort of human document that rouses strange questionings along with warm admiration.

*The Training of Youth.* By T. W. Berry.  
(7s. net. Fisher Unwin.)

This book is made up of four parts. The first deals with The Situation and the Problem; the second with Recreative Methods, the third with Moral Problems, and the fourth with Technical Education. As one reads the comfortably large print, one agrees placidly with most of what the author says. He is probably at his best when dealing with the moral problems, for there he not only gives sound advice, but becomes vigorous. With regard to most of the book, one wonders why it was written: one is so familiar with the general lines followed. But probably we who have to read a great many books on education become unwholesomely bored, and not sufficiently alive to the need of educating the public at large. As Mr. Berry remarks in his preface, his book is meant not only for those "who are in close touch with adolescents, but also to serve a much wider purpose, because the nation as a whole needs to turn its attention to its duty towards the young, both outside the school and during the critical years immediately after school life." There is therefore a field for this pleasantly written book, and I cordially hope it will reach the people for whom it is intended. A.

### English.

*Hearts Courageous.* By John Oxenham. Pocket Edition.  
(1s. 3d. net. Methuen.)

A collection of short poems, mostly topical, no doubt intended to be serious and reverent, but including many bad rhymes, much jingle, and shoddy sentiment—defects not hidden by a wealth of pious ejaculations. Here are poems for everyone—the W.A.A.C.'s, the W.R.N.S., the soldiers, the seamen, the airmen, even the munitioneers—all excite the facile peans of this comprehensive lyricist. Nothing is sacred to this irrepressible rhymester. In the colour of his emotions he is chameleon-like. When we read such doggerel as

But, oh! it's hard to lose him so,  
And him so near to me;  
Now he's at rest, and God knows best,  
But it's all a mystery;

we want to add with irreverence

Diddledum, diddledum, dee.

The longest poem "Christ in the City" is sheer banality and misses altogether the dignity of Lowell's "Parable"; while to sing a grim tragedy of ten men in a shell hole to the tune and lilt of "Ten Little Nigger Boys" is unpardonable. Yet apparently, from the size of this first issue (32,000 copies), such stuff sells well, a fact which causes us to reflect with misgivings upon the standard of literary taste and appreciation possessed by the public who buy these books. FELIX.

*The British Navy: The Navy Vigilant.* By L. Cope Cornford.  
Illustrated. (2s. net. Macmillan.)

A readable little book for boys and girls descriptive of the Navy past and present. The informative matter is interspersed with stirring historical accounts of Naval heroes and Naval episodes such as Trafalgar and Quiberon Bay, Lord St. Vincent, and Lord Beresford. The book has the appearance of having been hastily brought up to date, for the Great War receives scanty treatment. The actual facts are not always accurate. Thus the author should know that the "curl" is now worn by all officers and is not confined to Executive and Engineers. Again the "horned" mine is not the only or the most recent type of mine used, while Monitors, Motor Launches, Coast Motor Boats, &c., are not mentioned. It is misleading too, to cite the "Defence" as a type of armoured cruiser two years after her loss at Jutland. The "Zeebrugge" exploit occupies less than one page, but the Battle of Saintes has seven pages. The book can, however, be recommended to schools for its historical sections, though we think boys should know something of the excellent training of the gunner and torpedo-rating. R. N. V. R.

*English Prose, from Bacon to Hardy.* Selected and edited by E. K. Broadus, M.A., Ph.D., and R. K. Gordon, M.A.  
(6s. net. Oxford University Press.)

Books of prose extracts are numerous. All have the same defect, since they are extracts and can never replace the originals. Yet for this one we have nothing but praise; it is among the best of its class. Here we may trace in complete perspective the full development of modern English prose. Every extract is characteristic of the author, if not always intrinsically his best. Excellent synopses of the originals make the book continuous and coherent; while a novel and admirable feature is the inclusion of extracts in which each selected author sets forth his own aims and ideals in writing.

If we would strike a balance, the eighteenth century would appear to be over-represented, especially in Essayists and Polite Letter Writers. Some authors are perhaps strangely represented. We should hardly expect two "Lives of the Poets" alone to represent Johnson—"Rasselas" might have found room—while "Boswell" is missing. We find Macaulay's History, but not his "Essays," while Wordsworth as a prose writer is included and De Quincey is omitted. Yet, as literary history for literary students, the book is a splendid success. The galaxy of authors ends with Hardy. We wish it could have been continued to the present day, but this would require twice six hundred pages.

F. F. P.

### History.

*A History of England from the Landing of Julius Caesar to the Present Day.* By the Rt. Hon. H. O. Arnold-Forster.  
Revised edition by Mrs. Arnold-Forster. (7s. 6d. net. Cassell.)

Like Sir Walter Scott, the late Mr. Arnold-Forster valued the romantic colour and human interest of history rather than pedantic exactitude, and only a hard-hearted professor would reproach him for presenting a picture of nineteenth century bailiffs taking a poor seamstress's sewing-machine, and (according to the picture-title) "breaking Magna Charta." Mr. Arnold-Forster had a gift for simple, dramatic writing, and for selecting concrete illustrations. When he tells of Caxton, he reproduces lines from a book printed by "me William Caxton at Westmestre," and engravings of lower and upper "cases." If he talks of Flodden, he produces a drawing (not a dull photograph) of Twisel Bridge and a page of Scott's poetry—

From Flodden ridge  
The Scots beheld the English host, &c.

He cannot pass the Protestant crisis without printing, in staff notation, the tune of Luther's hymn. Dr. Dry-as-dust would say the Fleet was expanded in the reign of Henry VIII, but Mr. Arnold-Forster reports the splendour of "Great Harry" of 1,000 tons:—"She carried twenty-three great guns, and some of her cannon carried shot weighing thirty pounds, which is heavier than most of the cannon-balls which were used at the Battle of Trafalgar nearly three hundred years later."

When he comes to Mary Queen of Scots, he heartily insists:—"There seems, no doubt, indeed, that she was one of the most beautiful women of her time." If he refers to the Renaissance, he renders the idea attractive with a fine little picture of Michael Angelo's tomb of Lorenzo. While others would dryly note the establishment of the Australian Commonwealth, he offers a full-page picture of the animated scene at the inauguration of the Commonwealth Parliament by the Duke of York (George V). The chapters ring with poetic quotations, and portraits of poets and statesmen adorn the lively narrative. Mr. Arnold-Forster's instinct was sound: he knew how to capture and sustain the young reader's interest. On the economic side, which present-day events reveal the importance of, he is weak. Of the life of villagers (the main population) under the Manorial system and of the Industrial Revolution and Trade Unionism he says practically nothing. Such topics were not in fashion with popular historians when this book was first issued in 1897.

A Selection from

OF ALL BOOKSELLERS.

# PITMAN'S LIST OF BOOKS FOR SECONDARY SCHOOLS.

## THE PROGRESSIVE FRENCH GRAMMAR.

By Dr. F. A. HEDGCOOK,

*Officier de l'instruction publique; Officier d'Academie, and the only English Docteur-es-Lettres of the University of Paris.*

In this book the author, a well known authority on the French Language, has adopted an entirely new method, combining the direct with the indirect. An important feature is the introduction of phonetic type, by which a closely approximate idea of French pronunciation is conveyed.

PART I, 3s. 6d. net; PART II, 2s. 6d. net; KEY, 3s. 6d. net.

### SPECIAL OFFER.

A sixteen-page section of this important new text-book, together with a descriptive prospectus, will be sent, post free, on application to the Publishers.

### BOOK-KEEPING.

**BOOK-KEEPING FOR BEGINNERS.** A first Course in up-to-date Book-keeping. With Answers and Exercises. Cloth, 1s. 6d.

**COMPLETE BOOK-KEEPING.** A thoroughly comprehensive text-book. Cloth, 5s. net. Answers, 2s. 6d. net.

## PITMAN'S SHORTHAND RAPID COURSE.

Presents the System in 20 Simple Lessons.  
Price 2s. 6d., or, with Additional Exercises, 4s.

### 100 WORDS PER MINUTE AFTER ONLY 150 HOURS' INSTRUCTION.

A RECORD AT PITMAN'S SCHOOL.

On 29th July, 1918, by special arrangement with the War Office, a class formed of members of Q.M.A.A.C. commenced the study of Shorthand at Pitman's School, London.

AFTER 150 HOURS' INSTRUCTION (equal to 5 weeks' tuition of 6 hours per day),

NINE STUDENTS PASSED THE OFFICIAL TEST AT 100 WORDS PER MINUTE.

The matter forming the test was of more than average difficulty, having been selected for the purpose by the Military Authorities. The examination was conducted under the supervision of a Commissioned Officer of Q.M.A.A.C., who checked the time.

Teachers should send at once for Prospectus of the Rapid Course and 36-page illustrated booklet on "Shorthand: Its Invention and Present Position," which will be sent post free.

SIR ISAAC PITMAN & SONS, Ltd., 1 Amen Corner, London, E.C.4.

# UNIVERSITY OF EDINBURGH.

Chancellor: The Right Hon. A. J. BALFOUR, M.P., D.C.L., LL.D., &amp;c.

Rector: ADMIRAL Sir DAVID BEATTY, G.C.B., G.C.V.O., D.S.O.

Principal and Vice-Chancellor: Sir J. ALFRED EWING, K.C.B., M.A., D.Sc., LL.D., F.R.S.

Secretary of the University: Professor Sir LUDOVIC J. GRANT, Bart., B.A., LL.D.

The **Summer Session** extends from about the middle of April to the end of June; in Law, from May to July.

The **Winter Session** opens about the beginning of October and closes about the middle of March.

The University embraces **Six Faculties**, viz.: **Arts, Science, Divinity, Law, Medicine and Surgery, and Music**, in all of which instruction is given and Degrees are conferred. There are many different avenues to the **Degree of M.A.** (Honours and Ordinary) and the graduation subjects embracing English History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c. The wide scope of the Arts Curriculum permits of the Combination of Arts, Science, Medical, or Special Studies, and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Lit., D.Phil., and D.Sc. are conferred. The Degree of **Bachelor of Education** is conferred on candidates who have attended Courses and passed Examinations in Psychology and in Education (Theoretical and Practical). A Diploma in Education is also conferred. A Degree of **Bachelor of Commerce** (B.Com.) has been recently instituted, and Special Courses in Industrial Law and other kindred subjects are being provided. Degrees in **Science** (B.Sc. and D.Sc.) may be taken in **Pure Science, Engineering, Public Health, and Veterinary Science**, and the Degree of B.Sc. in **Agriculture and Forestry**. Temporary Regulations have been framed for a **Diploma and a Certificate in Forestry** for the behoof of Officers and men who have served in the War. There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in **Divinity** affords a thorough training in Theological subjects, and the Degree of Bachelor of Divinity (B.D.) is conferred. The **Law Faculty**, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and Constitutional History, Roman Law, and Political Economy, as also Lectureships in other important branches of Law, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of **Medicine** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, and Royal Asylum for the Insane. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.); and these Degrees qualify for practice throughout His Majesty's dominions and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A **Diploma in Tropical Medicine and Hygiene** (D.T.M. & H.) is conferred on Graduates in Medicine of the University, and specially approved Medical Practitioners who have resided abroad. There is also a **Diploma in Psychiatry** (Dipl. Psych.). In **Music** there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 44 Professors, over 90 Lecturers, and about 60 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £21,485. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in all the Faculties, and they are admitted to graduation in Arts, Science, Law, Medicine, and Music.

Information regarding Matriculation, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the DEANS OF THE FACULTIES, or from the CLERK OF SENATUS; and full details are given in the University Calendar, published by Mr. JAMES THIN, 55 South Bridge, Edinburgh—price 3s. 5d., by post. The Preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz.—Arts and Science Preliminary, 1s.; Arts Bursaries, 6d.; Medical Preliminary, 6d.; Degree papers: Arts, 1s.; Science, 1s.; Divinity, Law, Medicine, and Music, 6d. each.

1919.

By order of the Senatus,

L. J. GRANT, Secretary.

But when future writers for the young handle such themes they cannot do better than practise Mr. Arnold-Forster's vigorous and pictorial methods. The author's widow has revised the work, and slightly expanded it so as to bring it down to the first stage of the War. F. J. G.

*Helps for Students of History.* A. Series.  
(6d. net. S.P.C.K.)

The enthusiastic editors promise the students "a very Pisgah-sight of Palestine." If "Palestine" means assistance in tracing, verifying and comprehending facts and allusions in specialist lines of research, the Pisgah joys are happily realizable. Mr. E. C. Fowler explores the "Episcopal Registers of England and Wales," of which the earliest—that of Lincoln—opens so far back as 1209, though he complains that many diocesan records are still left unpublished, and "the neglect of Norwich is discreditably to East Anglia." Dr. F. J. C. Hearnshaw provides an entertaining glimpse of "Municipal Records," and, beginning with the true remark that "until the latter half of the nineteenth century the history of English towns was generally neglected," he gives notes on such national collections as are reprinted in Kemble's "Codex Diplomaticus Aevi Saxonici," and a number of documents locally preserved. For students in search of sensations, he quotes from the Southampton Assembly Books the awful case of Mrs. Toldervev, an alderman's wife, who was troubled with "great distemperature of minde"—and "speeche"! Dr. R. L. Poole guides us among the mysteries of "Medieval Reckonings of Time," and, by a sort of algebraic fraction, shows how he found out that June 3, 1162 (the date of Becket's consecration) was a Sunday. Mr. Charles Johnson discloses the open secrets (admission being free) of the Public Record Office in Chancery Lane—secrets of Chancery Files, Exchequer, Pipe Rolls, First Fruits and Tenths, State Papers, &c. A more sweeping survey is furnished by Mr. C. G. Crump, in his "Logic of History," and his hints on the valuation of materials and philosophic discretion of method are very sensible. For example, he seems to be venturing on a very simple observation when he says:—"Any child can readily learn to solve the direct problem of finding the sum of several numbers.  $7+3+2+1=13$ . But no one can solve the diverse problem and tell us what four numbers added together will make 13. The only answer that the most expert arithmetician can supply is that the possible number of solutions is indefinitely large." "Which things are a parable," indicating the difficulty of exactly assigning all the factors which have produced a given social condition.

F. J. G.

*France, Medieval and Modern: a History.* By Arthur Hassall. With 8 maps. (5s. net. Clarendon Press.)

For good or ill, Mr. Hassall has a very consistent style. He begins thus:—"The history of France from the Norman Conquest to the Battle of Waterloo is to some extent the history of the rivalry of the English and French monarchies, though from the death of Henry II of France, in 1559, to the opening of the war of the League of Augsburg in 1689, the two countries were for the most part at peace."

And he concludes:—"On August 2, 1914, German troops entered French territory. The reply of the French nation will be the reconquest of Alsace and Lorraine."

In this reference-book manner, profusely sprinkled with dates, Mr. Hassall wrestles through the ages, and packs a colossal mass of facts into his business-like pages. Now and then, a twinge of historical conscience makes him uneasily feel that, behind the imposing apparatus of monarchs, battles, treaties, and ministries, a great nation of peasants and citizens lives and labours. He says reproachfully—"Froissart ignores the miseries suffered by the mass of the people, and simply describes the pageantry of an age of dying chivalry." We may assume that Mr. Hassall regrets that he cannot do better than Froissart, or he has no space to spare for the all-important story of French agriculture and industry; but he just manages to snatch a page for Sully's

economic enterprises, another for Colbert, another for Turgot. In each case he resumes his breathless chariotceering through dates, diplomacies and conflicts; and he beats most of his competitors in the art of encyclopædic chronicle of dynastic, military, and political events. F. J. G.

### Spanish.

"The Macmillan Spanish Series."—(1) *Amalia*. By José Marmol. Edited, with Introduction, Notes, and Vocabulary, by A. H. Corley. (5s. 6d. net.) (2) *Leyendas Históricas Mexicanas*. Edited by James Bardin. (4s. net.) (3) *Manual de Correspondencia*. By Fuentes and Elias. (5s. 6d. net.)

(1) José Marmol's novel deals in a most fascinating way with the stirring events of the life of General Rosas in what may be termed the construction period in the history of Argentina, from 1840 onwards. Apart from the fascination of the story, which is considerable, we are given a graphic account of various phases of South American history in the middle of the nineteenth century. As a reading book in Spanish it should be both useful and popular, and the well arranged exercises which follow the text will add considerably to its value as a book for the classroom.

(2) These are selections from the work of a modern Mexican writer, Heriberto Frias. A short historical introduction in English briefly outlines the early history of Mexico, and the text presents the history of the Aztecs, from the foundation of Tenochtitlan to the Spanish Conquest, in the form of legends. The numerous Aztec words give the text at times a formidable appearance, but the subject-matter should prove of considerable interest. The headings of chapters and foot-notes are exceptionally full and clear up such difficulties as the text is likely to furnish.

(3) A student who works through the fifty-six typical Spanish letters with explanatory notes, together with the outlines of letters in English to be turned into Spanish, which form the major portion of this volume, will have mastered most of the technique of Spanish Social and Commercial Correspondence. The notes are extremely lucid and well arranged, and an unusually full list of abbreviations is a very useful feature of the book. The publishers are to be complimented on the excellent appearance of this series, type and binding being particularly good.

*A Spanish Reader.* By H. C. L. Balshaw. (3s. 6d. Murray.)

As a book of "unseens" this might be quite useful. The passages, 125 in number, have been judiciously selected, but in most cases they are too short to be of interest in themselves. The notes are somewhat fragmentary, not always clear, and occasionally superfluous.

*Trazos de Historia.* A Spanish Historical Reader by F. E. Spencer. (60 cents. Ginn.)

A series of short narratives told in Spanish of varying degrees of difficulty dealing with the history of Spain and Spanish America. The editor appears to have drawn mainly on Spanish American writers for his material. About half a dozen pages of notes are supplied dealing almost exclusively with historical or geographical explanations.

*María.* A novel by George Isaacs. Edited by R. H. Keniston. Ph.D. (Ginn.)

The editor claims that this is the first Spanish-American novel to be offered to English-speaking students. It is an interesting story, and in this abridged form is well adapted for classroom use. A set of useful exercises based on the text is added at the end of the book, as well as a full vocabulary.

"Oxford Spanish Plain Texts."—(1) *Poesías Varias de Garcilaso de la Vega*. (2) *Elogios de Garcilaso de la Vega*. Edited by J. Fitzmaurice-Kelly. (1s. 6d. each net. Clarendon Press.)

Two neat little books of some 80 pages each, giving the three eclogues, two elegies, an epistle, five *canções*, and 38 sonnets which constitute the poetical output of the "sublime" Garcilaso and were first published by the widow of the poet Boscán along with her husband's works towards the end of the sixteenth century. J. N. B.

# Completion of the Cambridge Bible for Schools and Colleges

GENERAL EDITORS: A. F. KIRKPATRICK, D.D., and R. ST JOHN PARRY, D.D.

**The Old Testament** complete in 34 vols.

**The New Testament** complete in 19 vols.

With introductions, notes and maps.

Three of the books of the **Apocrypha**, viz.: *The Wisdom of Solomon, Ecclesiasticus, and Maccabees I*, have also been issued in the Series.

A prospectus giving a list of the volumes and prices will be sent on request

## WINSOR & NEWTON, Prepared Water Colours,

IN

WHOLE and HALF CAKES, WHOLE, HALF, and  
QUARTER PANS,  
and WHOLE, HALF, and LARGE TUBES.

**QUARTER PANS** of Winsor and Newton's Artists' Water Colours are of the same outside dimensions as the Half Pans. They may, therefore, be used in Winsor and Newton's range of Half Pan Japanned Boxes.

The advantages of habituating the Student at the outset of his career to the use of the **BEST** materials are so obvious that no attention need be drawn to them.

Messrs. Winsor and Newton's Artists' Water Colours are necessarily more expensive than those usually manufactured for School use, but as, owing to their superior strength, a small quantity yields approximately the same amount of colour surface as the larger pans of Water Colours generally sold for Students' use, the expense in both cases is much the same.

The special attention of Teachers and the public is, therefore, invited to these Quarter Pans of Colour, which, costing practically the same, provide the Student with a superior article.

Full detailed catalogue may be obtained from any of the leading Artists' Colourmen throughout the Country, or from 39 Rathbone Place, London, W.1. Established nearly a Century.

## TUITION BY POST.

Practical Training in

### **SHORTHAND,**

**BOOK-KEEPING AND ACCOUNTANCY,**

**COMMERCIAL PRACTICE, BANKING,**

**ADVERTISING, COMMERCIAL LAW.**

Pitman's Postal Courses are admirably adapted for teachers who are unable to take advantage of the ordinary facilities for receiving oral instruction, but desire to qualify in commercial subjects. Each lesson is a full exposition of that part of the subject covered. One course, or any group, may be commenced at any time, and from any stage of present knowledge.

Write for details, stating the subjects in which you are interested.

## PUBLISHERS' ANNOUNCEMENTS.

## Cambridge University Press.

Mr. J. D. Duff has edited the text of Lermontov's "Novice," with introduction, notes, and vocabulary, for the Syndics of the Cambridge University Press.

"Mtsyn," or "The Novice," was published in 1840, and has always been a favourite with the Russian people: in Dr. Duff's edition, which will be published immediately, the text is accented, and every word occurring in it is included in the vocabulary.

In 1914 there appeared the first volume of "The Reign of Henry the Fifth," written by the late J. H. Wylie, whose work won high commendation from competent critics. The second volume, dealing with the years 1915-16, will shortly be published by the Cambridge University Press.

# TEACHERS REGISTRATION COUNCIL.

REPRESENTATIVE OF THE TEACHING PROFESSION.

(Constituted by Order in Council, 29th February, 1912.)

---

---

## OFFICIAL LIST

OF

## REGISTERED TEACHERS.

---

---

The Statutory duty of the Council is to frame and keep a Register of Teachers, and a list of those registered under the conditions prescribed by the Council will be published from time to time. The first list was issued in 1917, and the second one is now in course of preparation.

In addition to its statutory duty, the Council has acted in co-operation with the Board of Education in many important matters affecting the interests of Teachers.

Up to and including Thursday, the 27th February, 1919, the number of applications for admission to the Register was 25,410. All qualified Teachers who have not already registered should write at once to:—

THE SECRETARY,  
TEACHERS REGISTRATION COUNCIL,

47 BEDFORD SQUARE,

LONDON, W.C. 1.

**DUSTLESS and HYGIENIC SCHOOLS**

On all School, Laboratory, Library, &c., Floors and Linoleums of every description

**USE**

**FLORIGENE** (Regd.)

VERY EARLY in the **EASTER VACATION** for Best Results.

(BRITISH MADE.)

It is **IMPORTANT** to **NOTE** that **ONE APPLICATION** of "Florigene" **ALLAYS** the **DUST** and **DIRT** for **2 TO 12 MONTHS**, according to traffic, not only during each Sweeping (without sprinkling of any kind) but also throughout all the intervening periods—which is of greater hygienic importance. "Florigene" is also easily and quickly applied, and saves time and labour.

These sanitary, labour-saving, and economic advantages are **NOT** attained by sweeping-powders or any mechanical or other method.

# THE EDUCATIONAL TIMES.

A REVIEW OF IDEAS AND METHODS.

112

(Founded 1847.)

Mar. 1919.

## HISTORY.

### ANCIENT TIMES: A History of the Early World.

By J. H. BREASTED, Ph.D. xx+742 pages. Illustrated. 7s. 6d. net.

### MEDIAEVAL AND MODERN TIMES.

By J. H. ROBINSON, Ph.D. xii+777 pages. Illustrated. 7s. 6d. net.

The purpose of these books is to give the student that broad general knowledge of the great political, economic, and artistic achievements of all ages, which will supply a background whereon those portions of the subject which are being studied intensively may stand out vividly and in their correct setting.

**Ancient Times** begins with a short account of the stone age in Europe, and goes on to tell of the various Oriental Civilizations—Egyptian, Babylonian, Assyrian, Chaldean, Persian, and Hebrew. Then follows the story of the dawn of European Civilization, of the rise and decline of Greece and Rome, and of the overthrow of the Roman Empire by the barbarians. The story of each great race or nation is clearly disengaged and presented in period after period, but the book outlines the early career of man as a whole.

**Mediaeval and Modern Times** continues the narrative from where Professor Breasted left it. In this book emphasis is placed not on mere events of the past, but rather on those institutions and conditions that coloured the life of their times and determined the historical development of succeeding ages. Nearly half the volume is devoted to the history of the last two centuries, so that the pupil is actually brought abreast of his own times and prepared for intelligent observation and appreciation of the happenings of current history.

Both books are remarkable for the number and beauty of their illustrations, which have been made an integral and important part of the narrative. They will add much to its attractiveness and interest both for the student and general reader.

### THE DEVELOPMENT OF MODERN EUROPE.

By J. H. ROBINSON and C. A. BEARD.

VOLUME I. The Eighteenth Century: The French Revolution and the Napoleonic Period. 12mo, cloth, xiv+362 pages, with maps and illustrations. 7s. 6d. net.

VOLUME II. Europe since the Congress of Vienna. 12mo, cloth, 448 pages, with maps and illustrations. 7s. 6d. net.

These volumes will meet the demand for a history of recent times, which shall explain the social and economic, as well as the political development of our own age, and shall also prepare the student to understand the great problems which the nations of the world have to face at the present time. Much less space is devoted to purely political and military events than has been commonly assigned to them in histories of the nineteenth century. On the other hand, the more fundamental economic matters—the Industrial Revolution, commerce and the colonies, the internal reforms of the European States, &c., have been generously treated.

### READINGS IN MODERN EUROPEAN HISTORY.

Edited by J. H. ROBINSON and C. A. BEARD.  
2 volumes, each 7s. 6d. net.

These *Readings* are intended to accompany chapter by chapter and section by section **The Development of Modern Europe**. They both amplify and enliven the study of the text, and provide useful material for written exercises.

### THE LAST DECADE OF EUROPEAN HISTORY AND THE GREAT WAR.

lxxvi pages. 1s. 3d. net.

This little brochure is designed to supplement **The Development of Modern Europe**. In it the author has summed up briefly the developments which led to the European War, and has recorded the events of the earlier phases of it.

### THE LEADING FACTS OF FRENCH HISTORY.

By D. H. MONTGOMERY. 12mo, cloth. xxvii+328 pages. Illustrated. 6s. net.

This work is based on the French authorities—Guizot, Rambaud, Martin, and Duruy, and the object of the author has been to set forth in a clear and attractive narrative the most important events in the history of France. The story commences with Gaul before the Roman Conquest, and is brought down to the European War. Dr. Montgomery writes with sympathy and understanding of France and French conditions, and his book will prove valuable in both the class room and school library.

*A complete list of historical publications will be sent post free on application.*

## THE TEACHERS REGISTRATION COUNCIL.

Representative of the Teaching Profession.  
Constituted by Order in Council  
29th Feb., 1912.

The Council maintains an Official Register of Teachers who have been accepted for admission under the Conditions of Registration.

The Register is open to qualified teachers in every branch, and until the end of 1920 experience under approved conditions is the sole qualification required. After that date the conditions will become more stringent.

Particulars and Forms of Application may be obtained from

The SECRETARY,  
Teachers Registration Council,  
47 Bedford Square,  
London, W.C. 1.

## THE COLLEGE OF PRECEPTORS.

Incorporated by Royal Charter.

BLOOMSBURY SQUARE, LONDON, W.C. 1.

### MEMBERSHIP.

Membership of the College is open, under certain conditions, to persons engaged in education.

Particulars concerning the privileges of membership may be obtained from the Secretary.

### EXAMINATIONS.

**DIPLOMAS.**—The next Examination of Teachers for the Diplomas of the College will begin on the 29th of December, 1919.

**CERTIFICATE AND LOWER FORMS EXAMINATIONS.**—The Midsummer Examinations will begin on the 30th of June, 1919.

**COMMERCIAL EXAMINATIONS.**—An Examination for Certificates of Proficiency in Commercial Subjects will be held in December, 1919.

The Regulations for the above Examinations can be obtained on application to the Secretary.

## THIS ISSUE CONTAINS:

An Essay on  
Unaccompanied Singing  
in Schools;

A Sketch of "Arthur";  
and

A Poem by Fred Richards.

The SUPPLEMENT deals with  
The Training of Teachers.

## UNIVERSITY CORRESPONDENCE COLLEGE

(Founded in 1887.)

### PRINCIPAL:

WILLIAM BRIGGS, LL.D., D.C.L.,  
M.A., B.Sc., F.C.S., F.R.A.S.

## LONDON UNIVERSITY DEGREES.

(Graduates of British Universities and holders of certain Diplomas can register as matriculated students of London University without passing the Matriculation Examination.)

### A SHORT GUIDE

to London University Examinations, giving full Particulars of Courses and Fees, post free to PRIVATE STUDENTS from—

THE SECRETARY,  
No. 15 BURLINGTON HOUSE, CAMBRIDGE.

## THE ASSOCIATED BOARD OF THE R.A.M. AND R.C.M.

FOR LOCAL EXAMINATIONS IN MUSIC.

Patron: HIS MAJESTY THE KING.

**LOCAL CENTRE EXAMINATIONS (Syllabus A).**—Examinations in Theory held in March and November at all Centres. In Practical Subjects in March-April at all Centres, and in the London District and certain Provincial Centres in November-December also. Entries for the November-December Examinations close Wednesday, October 15th, 1919.

**SCHOOL EXAMINATIONS (Syllabus B).**—Held throughout the British Isles three times a year, viz., June-July, October-November, and March-April. Entries for the June-July Examinations close Wednesday, May 7th (Irish entries April 30th), 1919.

Specimen Theory Papers set in past years (Local Centre or School) can be obtained on application. Price 6d. per set, per year, post free.

The Board offers annually SIX EXHIBITIONS, tenable at the R.A.M. or R.C.M. for two or three years.

Syllabuses A and B, entry forms and any further information will be sent post free on application to—

JAMES MUIB, Secretary,  
14 & 15 Bedford Square, London, W.C. 1.

Telegrams: "Associa, London."

## THE INCORPORATED SOCIETY OF MUSICIANS.

Founded 1882.

Incorporated 1892.

### OBJECTS OF THE SOCIETY.

The objects for which the Society is established are the promotion of whatever may tend to the elevation of the status, and the improvement of the qualifications, of all Members of the Musical Profession, or may aid the musical education of the people.

### ADVANTAGES OF MEMBERSHIP.

A Benevolent Fund for members, the Regulations for which have purposely been made as wide as possible in order to meet the many and very varying contingencies which arise from time to time.

An Orphan Fund for the children of musicians, which is open to the dependents of all musicians, whether their parents were members of the Society or not.

Legal advice on all professional matters; Income Tax Claims; Copyright; The Recovery of Fees, &c.

Registers open to members of "Vacant Appointments" and "Engagements," and for the transfer from member to member of pupils moving to new districts.

### LOCAL EXAMINATIONS IN MUSIC.

The examinations of the Society, established in 1884, are carefully arranged in a systematic series of Progressive Grades, embracing a complete course of musical study, and constitute a most valuable guide for Teachers in recording the progress of their pupils.

Full particulars may be obtained upon application to the General Secretary, 19 Berners Street, W.1.

## The State and the Nation.

By EDWARD JENKS, M.A. Cr. 8vo. Cloth. 4s. net. An extension and amplification of the author's well-known "Short History of Politics"; forming a handbook of Citizenship based upon history which will be found exceedingly useful in adult classes, working-men's institutes, continuation schools, and university colleges.

## Comparative Education.

A Study of the Educational Systems of Six Representative Countries.

Edited by PETER SANDIFORD, M.A., Associate Professor of Education in the University of Toronto.

Demy 8vo. Cloth. 8s. 6d. net.

This important volume contains chapters on: United States, Germany, England, France, Canada, and Denmark.

*Times*.—"Dr. Sandiford has produced a really useful book."

*Athenæum*.—"A valuable contribution to contemporary educational literature."

## The New Testament for Schools

Arranged and Edited by Canon MORLEY STEVENSON, M.A., and C. W. BAILEY, M.A.

Crown 8vo. 3s. 6d. net.

The natural companion to the same Editors' "Old Testament for Schools."

## How to Read the Bible in the 20th Century.

By SOPHIE BRYANT, D.Sc., Litt.D., formerly Head Mistress of the North London Collegiate School.

Crown 8vo. 3s. 6d. net.

For teachers and pupils in Secondary Schools as well as for the home and the Sunday School of the modern type.

## DENT'S MODERN FRENCH BOOKS

**A Rapid French Course.** By RANDALL WILLIAMS and WALTER RIPMAN. Illustrated. Crown 8vo. 3s. net. Specially suitable for Evening Students.

**La France.** By G. GUIBILLON. Illustrated. Crown 8vo. Cloth. 3s. net. A book on French life and ways.

**A French Accuracy Notebook.** Compiled by E. ALLISON PEERS, M.A. Fcap. 4to, paper covers, 9d. net. Based upon the Accuracy Chart System, which has been tested in class work with excellent results.

**First Steps in French.** By WALTER RIPMAN. 2s. 6d.

**Further Steps in French.** By WALTER RIPMAN. 2s. 6d.

**Dent's First French Book.** By S. ALGE and W. RIPMAN. 2s. 6d.

**Dent's Second French Book.** By S. ALGE and W. RIPMAN. 2s. 9d.

**The Best French Prose.** Six Vols. Limp Cloth. Each, 5d. net.

**The Best French Poetry.** Six Vols. Limp Cloth. Each, 5d. net.

**Dent's Short French Readers.** With Reform Exercises. For Second, Third, and Fourth Years. Limp Cloth. Prices—5d., 5d., and 8d. each.

## DENT'S MODERN SPANISH BOOKS

**Dent's First Spanish Book.** By F. R. ROBERT. Illustrated by J. AYTON SYMINGTON. 2s. 6d. net.

**El Lazarillo de Tormes (Cervantes).** Translated and adapted by C. C. RICHARDSON. 1s. 9d. net.

## DENT'S MODERN ENGLISH BOOKS

**An English Pronouncing Dictionary.** By DANIEL JONES, M.A. Demy 8vo. Cloth 7s. 6d. net. Based on the system of the International Phonetic Association.

**Story Tellers' Hall.** A Literary Reader for Junior Forms. Edited by Dr. RICHARD WILSON. 2s. 3d. net.

**Treasure Trove.** A Literary Reader for Middle Forms. By the same Editor. 2s. 3d. net.

**Coronata.** A Book of Poems. By the same Editor. 2s. 3d. net.

**Composition through Reading.** By F. PICKLES, M.A. The Direct Method of Teaching English.

INTRODUCTORY BOOK for Junior Forms. 1s. 9d. net. A Complete Preparatory Course.

BOOK I for Lower Middle Forms. 1s. 9d. net.

BOOK II for Upper Middle Forms. 2s. net.

## NOTES AND COMMENTS.

### The Teaching "Profession."

THE latest regulations of the Board of Education on the training of teachers form a most welcome advance towards the idea of a united teaching profession. Hitherto students in training colleges have been definitely marked off into different classes, according as they intended, or were intended, to teach in public elementary schools or in secondary schools. A cross division arose from the existence of "subject" institutions for teachers of domestic science, drawing, or music. Since one of the first necessary characteristics of a profession is that there shall be freedom of passage as between one field of its work and another, limited only by the personal fitness of the individual, it follows that no true professional feeling can exist if teachers are to be placed in separate grooves at the outset. There is a common element of craftsmanship or "mystery" in all real teaching, modified, it is true, according to the circumstances in which the craft is exercised, but substantial enough to form a professional link between teachers of every type and in every branch of the work. Hence we welcome the Board's decision that the student in a training college shall not be earmarked in future as belonging to the elementary school or the secondary school, but shall be free to take up work in either type of institution.

### Fundamenta Divisionis.

UNFORTUNATELY this essential "one-ness" of teaching work has been imperfectly recognized hitherto, not only by those responsible for educational administration but equally by teachers themselves. The latter have tended to emphasize their sectarian differences, individuals claiming a superiority merely because of the social standing of the parents of their pupils, or because they worked in a "public" school as distinct from a "grammar" school, or because they taught the higher rudiments of chemistry in a University and not in a secondary school, or because they taught in a private elementary school and not in a public elementary school. The teachers in the last-named institutions have sometimes claimed a superiority in the technique of teaching as an offset to the academic attainments of their colleagues in the secondary schools. The elementary school teachers themselves have by no means been content to find their sole refuge in the ample folds of the National Union of Teachers. This vast and powerful organization includes among its members those who belong also to associations of Class Teachers, of Head Teachers, of Rural Teachers, of London Teachers, or of Women Teachers, not to mention the ardent spirits who constitute a kind of "ginger group" under the banner of the Teachers' Labour League. The basis of division is infinitely varied and we have some three-score distinct associations of teachers, ranging from the Association of Private Governesses to the recently formed Association of University Teachers.

### The Need for Unity.

EACH of these three-score bodies is pursuing its own ends, and in this there is no matter for complaint. The difficulty comes when they pursue their ends without due regard to the general welfare of teachers. It is unfortunately true that the term "teacher" has no precise or accepted connotation among the ordinary public, to whom indeed the word appears to convey no suggestion of special attainments or professional skill, if one may judge by the apparent ease with which people can obtain money by professing to teach when they have no ascertainable qualifications for the work. The necessary task of enlightening the public is rendered, not easier, but more difficult, by the present conflict of teachers' associations, and especially by the tendency of some associations to act as if the word "teacher" were exclusively and solely applicable to their own members. The first duty of all associations of teachers, as of all individual teachers, is to see that their calling is better understood and more highly regarded by the community. This should be considered in every act of every association and, above all, it should lead to a determination to close the ranks and achieve that real unity without which it is idle to talk of teaching as a profession. When teachers have decided to unite their forces and to pursue steadily the aim of attaining such measure of self-government as will enable them to ensure that the word "teacher" shall have a real content and meaning, then they will be on the road which leads to higher public regard, to improved salaries, to better conditions of work, and, above all, to the satisfaction which comes from playing a useful and recognized part in the service of the community.

\* \* \* \*

### The Centre of Union.

THE necessary point about which the various types of teachers may gather is the professional Register, established by the unanimous desire of associations of teachers some seven years ago. Every profession properly so-called has its official Register containing the names of those who have been tested and found worthy of admission. Further, every profession imposes its own test by the agency of its chosen representatives, who should properly have regard not only to professional but also to the general welfare, for the interests of any body of workers must be duly subordinated to those of the community. It is now over five years since the official Register of Teachers was opened under the auspices of a responsible body of forty-four representatives of teachers' organizations. During this period some twenty-six thousand teachers have applied to become registered, but the remarkable thing is that only one association of teachers has thought fit to make registration obligatory upon any of its members. It might have been supposed that associations which had demanded a Register and had agreed to send representatives to the Registration Council, would

have taken prompt measures to ensure that all their own members, if eligible, were registered as speedily as possible. Excellent work has been done by many associations in the way of bringing before their members the importance of registration, but no compulsion has been exercised, even by bodies which have urged that those of their members who are registered should be placed in a special position of advantage in regard to salaries and promotion. This would seem to be due chiefly to the tendency of associations to be immersed in their own concerns and to become correspondingly oblivious of the importance of a united teaching profession.

\* \* \* \*

### The Professional Council.

THE representative body which is charged by law with the duty of framing and keeping a Register of Teachers, with the right to prescribe the conditions of admission to the Register and to vary these conditions as it may determine, is clearly an instrument of great possibilities in all that concerns the welfare of teachers. The Teachers' Council, representing, as it does, every branch of teaching work, and responsive, as it must be, to the views of the bodies which appoint its members, may be made the means of securing due recognition for teachers as a body. It may be used by teachers as the accepted medium for placing their views before the legislature and the public, thus avoiding the risk of defeat which must attend divided counsels. It may organize and supervise the development and application of new discoveries in educational science, thereby preserving teachers from the unwelcome attentions of assiduous amateurs and of retired inspectors who have succumbed to a belated enthusiasm for infants. It may establish the principle that within the orbit of the profession there is an open career for ability, that as a curate does not impair his chance of becoming a bishop by serving a slum parish, so a teacher should not lose his chance of becoming a University professor or the Head of Winchester by working for a time in a Council School. These things can be accomplished if teachers desire them, and the sign of their desire is that they become registered with all speed. Otherwise they must continue in their separate categories, marked off like the competitors in a sprinting match. As they pursue their lonely way they may recall Shakespeare's lines:

The fault, dear Brutus, is not in our stars,  
But in ourselves, that we are underlings.

### Army Education.

THE scheme of education for the Army is a thing of wonder. Vainly have we attempted to believe that it is a thing of substance. Despite the efforts of a most skilful press agent and the well accredited stories of Royal interest, we are unable to comprehend how the scheme is working and we have still to meet anybody who believes in it. The greatest sceptics of all are

the men who have recently left the Army after seeing the scheme at work. Some of these describe it, in their picturesque military fashion, as "silly eyewash." Others, more tolerant, think it is a good thing for some of the lucky ones who have been appointed to direct it. Nobody is ready to declare that he has met a soldier who is being or has been educated in any real sense under the scheme. At best, so we are told, it is a means of relieving the tedium of the present post-script to real warfare. It will be a matter for regret if the praiseworthy efforts of Lord Gorell and his assistants are countered by the passive resistance of a certain type of commanding officer, but we have an uneasy feeling that the whole scheme is far too ambitious in scope, and we are in no way impressed by the information that two million lead pencils are consumed fortnightly in the effort to place the British Army *in statu pupillari*. On the general question, some small light is thrown by the record which follows.

\* \* \* \*

#### Our Army Correspondent writes :

At the beginning of December last year I was formally appointed Educational Officer to a Reserve Brigade of Royal Field Artillery. My brother officers congratulated me on having at last obtained a "cushy" job! On the following day a Conference was held to discuss the plan of our educational campaign, and at this meeting were present the Colonel Commanding the Brigade, the Chief Educational Officer of the "Command" in which our Brigade was a unit, the Entertainments Officer, and myself. The "Chief Educationist" began by assuring us that the War Office attached the highest importance to the Army Education Scheme. It was even disposed to give aid! A covey of expert lectures on subjects many and varied had collected. A beneficent W.O. had provided us with the means of "flushing" the covey by Army Forms! The dispatch of A.F. xyz would bring within our camp the messenger of learning.

We were, however, to rely as well on our own efforts. "Surely you have in the camp plenty of officers and men capable of becoming instructors in such subjects as French and typewriting," said the chief E.O. To my objection that one could not make much progress in French with three lessons per week in two months, the Great Man replied: "That doesn't matter. The great thing is to *interest* the men in the subject. If they leave for another camp they will there continue from the point at which they left off." I then bluntly asked him if he were a schoolmaster in civilian life. "Oh, no!" he replied, "I was a lawyer." I had nothing further to say.

The victims of this scheme were for the most part returned B.E.F. men eagerly awaiting demobilization. There were no "A.IV" men (*i.e.* youths of 18½) in our camp. Our numbers fluctuated between 2,500 and 3,500, and the personnel changed from day to day.

Was it likely that men about to return to their homes after a long absence would be interested in French verbs or in the science of beekeeping? Further, each officer and man was given twelve days' "Christmas leave" during December and the early part of January. They were dispatched in parties of 200. What work could be done with classes continually varying in size and consisting of different individuals each time they were held? The syllabus suggested by the War Office was sufficiently catholic. It included most languages, living and dead—French, German, Italian, Arabic, Sanskrit, Latin—embroidery, electrical engineering, bricklaying, agricultural science, and beekeeping.

Whence was the staff to come who should teach these multifarious subjects? If a gunner approached me and said, "Sir, I want to beekkeep," or "Sir, I earnestly desire to study Persian," what answer was I to make to him? To place him under arrest would have been high-handed and injudicious; to have answered in Army slang, "You're unlucky!" would have seriously injured my prestige. As a fact, about twenty officers asked for a course in Spanish. No one in the Brigade would undertake to teach Spanish, and I forthwith applied—on A.F. xyz—to H.Q. for a lecturer. No reply, not even an acknowledgment of the request, had been received by the date of my demobilization.

A few professional teachers were in the camp, and with their help I had started one or two classes in book-keeping. Then came the Order that Group 43 (schoolmasters, &c.) were to be demobilized forthwith—and forthwith we went.

About five men had been sent to Oxford to undergo a "three weeks' intensive course of training as Army lecturers," but they had not returned from "Christmas leave" when I bade good-bye to the Army.

Such is my experience of the early days of the Army Educational Scheme. Perhaps some more reasonable, if less ambitious, plan is in existence now. Pious wish!

---

#### Watsonian War Memorial Fund.

At a meeting of the Executive Committee, held in the Merchant Company's Office, Edinburgh, a list of claims for relief lodged on behalf of children and other dependents of Watsonians who had been killed or incapacitated in the War was submitted. It was decided in the meantime to fix the maximum annual grant to be allowed for each dependent at £25, and it was remitted to a sub-committee to consider the claims lodged and to allocate grants immediately.

It was reported that the Fund now amounted to £7,904, and it was hoped that the minimum sum which it was estimated would be required for the purpose of the Fund—viz. £10,000—would shortly be subscribed. Old Boys who have not yet subscribed are requested to send their contributions to the Honorary Treasurer, Mr. Robert Paton, City Chambers, Edinburgh. Consideration of the form of the permanent memorial to be erected at the College was deferred.

## UNACCOMPANIED SINGING IN SCHOOLS.

By HERBERT ANTCLIFFE.

ENGLAND might once have been described as "a nest of singing birds," and even to-day it ranks among the few countries where really great choral singing is to be heard. Yet the amount of bad singing which one comes across in moving about among the various grades and types of "middle-class people" is often appalling, and always very discouraging to those who have the musical welfare of our country at heart. There are two very evident signs of the failure of the middle classes to realize the importance and utility of vocal music. Of these the most pronounced is the decline in taste on the part of those who by nature and training are led into the way of singing solos in their own or other people's drawing rooms; and the other, is the lack of desire and ability on the part of others to sing either alone or in company.

It may be admitted that in certain small circles there has been during the last few years a decided improvement in the choice of songs for the concert platform, and in a less degree for the drawing room, while it is easy to find fault, as many do, with the songs which were popular a generation ago. Shield and Balfe and Henry Russell, and still more Pinsuti and Abt, were at their best but inferior writers. Yet feeble as most of their songs were, they compare very favourably in freedom from mawkishness and sentimentality with the bulk of songs of to-day. Moreover, they were made to be sung with a musical quality of voice, not to be barked or yelled with little or no regard for melody, as seem to be most of the songs which we now hear at social gatherings.

The causes of this bad singing and choice of music are manifold, and some are perhaps outside the scope of an educational journal. Two of them, however, are matters for the schools. These are the false precocity of the youth of to-day and the tyranny of the pianoforte in matters of education. The cure for both of these is to be effected by the singing of suitable songs in a suitable manner.

Now, in speaking of the false precocity of the children of to-day, I am not suggesting that they should have the same ideas and the same manners as their parents had at the same age. The younger generation is naturally and rightly more precocious than its predecessors in certain matters. But there is an unnatural and vicious precocity, a precocity which is morbid and harmful to both health and morals, and which finds expression in the desire to adopt the manners and songs of the lower types of adult intelligence. This can be combated in school life by both direct and indirect means: by definitely discouraging any acquaintance with such songs, by ignoring them as far as is possible, and most of all by providing an abundance of good songs of a suitable type.

All artistic feeling is naturally active, and, therefore, as all possess a faculty for music, this will find activity in a wrong direction if it is not encouraged in a right one. We often hear regret expressed that the music-hall habit is so easily and so soon acquired, but this would not be the case if ample good music and other suitable and attractive entertainment were provided for our young people, and if they had received a right musical direction in their early days.

That there is an ample supply of good and suitable music obtainable may easily be proved by reference to the publishers' catalogues. Moreover, the publishers exist to meet the demands of their customers, and as soon as the demand for good types of songs suitable for children in or out of school increases there is sure to be a corresponding supply.

For the proper training of ear and voice, it is necessary that some of these songs should be sung in two-, three-, or even four-part harmony, and without instrumental accompaniment. Talking to a veteran school inspector some time ago, his remark about a certain elementary school was that he had never known in his many years' experience a single child from that school who could not sing in tune and time and with a pleasant quality of tone. Further inquiry showed that the reason undoubtedly was the absence of any kind of instrument from that school, and the practice of always singing in parts. Possibly this particular instance was an exceptional one, for the school was in the North, and the head master was himself an enthusiastic amateur singer. Nevertheless the same thing is done in other schools, and might be done in many more.

I am not disparaging the pianoforte as an accompanying instrument for either singing or physical exercises; it is only its disproportionate and tyrannical use that is objectionable. In the majority of schools to-day there are few who can sing without accompaniment, and few who can maintain the pitch for any length of time. They have been so completely infused with the tradition of the necessity of being supported by an instrument that they cannot do without that support. Had they been accustomed to singing without it they would be able to sing in time and tune much better than they do, and they would also possess in some degree that much desired gift, the sense of relative (usually wrongly called absolute) pitch.

We often hear the remark that the pianoforte is a necessary support for the majority of voices, that without it the falling in pitch is painful alike to the singer and listener, that without its aid it is so difficult to be sure we are singing in the right key, and so on. With regard to the last of these, it may be said that the exact key in the majority of cases is a matter of no importance so long as the parts are within the range of the voices to which they are allotted. Moreover, the teacher who cannot at once from the note of a pitch fork or pipe find any key that is desired is sadly lacking in the most elementary musical education. If the sense of pitch is sufficiently developed to do without any external means of finding the key so much the better, but in any case once found the voice alone should be employed.

It is the idea of supporting the voices that is most particularly noxious. Is the human voice to be compelled to go on the crutches of an instrument? Emphatically it ought not to be so. When the voice needs such support there is some falling from its original strength and purity, and such fall should be the rare exception and not the rule. The boy or girl who requires crutches, ankle supports, or even a staff to walk with is either ill or prematurely old. Such weakness may be caused by actual disease or by the neglect of proper exercise through ignorance or idleness. The same conditions exist with regard to the vocal organs, with the one exception that they are intended for less

hard work, and are, therefore, more easily tired or injured.

There is a common idea that false intonation in singing arises largely from defective hearing—from having “no ear for music.” This is only partly true, and with ordinary proper training might be less so. A very large proportion of what defective hearing exists arises from the hearing of bad music, or music badly performed, or from natural laziness in listening. We know that children have frequently to be told to listen carefully when spoken to; just as frequently in proportion they should be told to listen carefully to music. It is just as natural to sing well as to speak well, and the same training, and for ordinary purposes no more training, is necessary. The reason why more training appears to be necessary for singing than for speaking is that such training is usually left till adolescence, or at least till youth, while the training for speech begins in earliest infancy. Higher training is necessary for public singing just as it is for public speaking, while music has its own literature which requires special study. The public singer requires a training that is similar in both manner and completeness to that of the actor; but it is just as natural to sing properly in a limited circle or with others as it is to carry on a conversation in a refined and intelligent manner.

Part-singing is recommended for several reasons. First, for some as yet unaccounted reason which is as much psychological as physiological, as an exercise it is less tiring than is unison singing. Certainly it is pleasanter and more interesting to both singers and hearers. Secondly, it leads to clear diction, self-dependence and good intonation much more effectively and completely than does unison singing; to clear diction because this is of the utmost and most obvious importance, and thus the teacher possessed of ordinary musical intelligence can criticize and correct it; to self-dependence because of the necessity of maintaining a part against the distractions of other parts; to good intonation because harmony is the source of intonation, and also because, owing to the division of the voices, there is less tendency for the weaker singers to drag down those who would sing in tune. Last, but not least of the reasons for this recommendation, is the splendid literature that exists of part-songs which are artistically good, morally and mentally healthy, and of the highest interest to singers and hearers. And of this literature no small proportion consists of British songs, national or individual, of the types which will do more to restore our national musical feeling than any others.

When I speak of National songs I use the term in its broadest sense, and include everything—from songs of which the words deal with history or national pride and national characteristics to songs with no particular national bearing in their words, but possessed of our national characteristics of bold melodic outline and well-defined rhythm, and that indescribable freshness of feeling which is possessed by the music of some other nations but by none so fully as our own. The songs available for children's voices range from the mid-Victorian “Moral” songs like “I know a funny little man as quiet as a mouse” to modern art songs and arrangements of modern patriotic songs. It is true that the two latter classes are not so common as we could wish them, but this is very largely due to the demand for those with pianoforte accompaniment.

With a demand for more unaccompanied songs will undoubtedly come a supply. It is pleasing to note that some of the bodies which conduct musical examinations are now helping to create this demand.

When some progress has been made in two-, three-, and four-part singing—but, generally speaking, not before this—unison songs may be effectively rehearsed and sung, either with or without accompaniment. There is no finer experience, however, than to hear a fine melody sung well by young people's voices without accompaniment.

One of the objections raised by many teachers to these arguments is that the average boy or girl has no time to study music in addition to all the other subjects which modern professional and social life make necessary. To this my reply is that I do not suggest that they should add to their musical studies, but that those studies should be curtailed and improved and made more interesting by being placed on the line of least resistance, which is that provided by Nature itself. For this we need skill in the reading of music, in the same way as we read the symbols of English, French, or shorthand, knowing at sight the sounds which are in the music without having to pick them out on an artificially constructed keyboard.

---

## RAPER OF TRINITY. SOME MEMORIES.

---

AMONGST those who have passed from us in recent years there are few whose names are held in such honour, and by so many, as the late Robert Raper, of Trinity, Oxford. He was the true friend of a long succession of men, by no means all members of his own college, of all kinds and classes.

Some sit as Ministers of State,  
And some as priests beg at their gate.

It would be worth one's while to make a collection of his delightful witticisms, if only as specimens of one subtle method of managing young men and exercising “discipline.” Here is one to announce that trespassing on the grass of the front quad was *verboten*:

“Games may be played in the quadrangle on payment of £1 for each throw, catch, drop, kick, dribble, shove, pass, run, hack, bowl, hurl, toss, hit or miss, cut, drive, slog, putt, or push, with any stick, wicket, club, bat, or bat-like thing of whatever material or shape, or with any ball or ball-like thing, of whatever shape or material, whether edible or not.”

One fine Sunday morning an undergraduate, now a well known man of letters, was seen by Raper, as he looked out of his window, in solitary possession of the Quad; for it was ten o'clock, and academical activity was at that hour of that day usually exercised *intra muros*. Our friend was airing himself and a new bottle-green coat, of which he was clearly proud, with evident satisfaction. Raper threw up his window, and called to X.: “I say, X., may I come down into your Quad?”

---

### Gift to the University of London.

The Ramsay Memorial Committee have offered to the University of London a sum of not less than £25,000 towards the foundation of a Laboratory of Chemical Engineering at University College. The Senate have gratefully accepted the offer, and are allotting a site for the purpose.

## "ARTHUR."

By HETTY MIDDLETON.

ARTHUR was nearly five when he first appeared at school, and "Teacher" was nearly twenty, a fair distance to be spanned, it is true, but Arthur achieved it with his first smile.

He was surely one of the quaintest little figures one could imagine, and "Teacher" smiled involuntarily as her eye fell on him. He was attired in a fawn jacket which must at one time have been his mother's best. It had voluminous sleeves of the type known as "leg-o'-mutton," was decorated with large pearl buttons, and boasted a most decided "bustle" in the rear where the pleats were gathered in. It descended nearly to his ankles, and the sleeves had to be rolled back several times to allow the tips of his fingers to emerge. His head was covered by an old and very dilapidated sailor-cap from which the shape had long since departed and which hung forlornly down over his collar as if mourning its past glory. It was still, however, adorned with a ribbon which was inscribed "H.M.S. Dreadnought," and surely never was title more fittingly worn, for Arthur was ever a gallant little "Dreadnought."

Advancing towards "Teacher" with his beaming friendly smile, he announced: "I've-come-to-school-Teacher-but-I-ain't-a-bit-flayed-'cos-I'm-goin'-to-be-a-butcher-and-butchers-aren't-never-flayed-of-any-think-not-even-mad-bulls-an-'ere's-t'-paper-wiv-mi-name-an'-birthday-as-Muvver-says-I-was-ter-give-ye-an'-please-will-ye-see-as-'ow-mi-coat's-fastened-wen-I-goes-'ome-'cos-it's-bitter-cold."

This was uttered all in one breath, much to the amusement of "Teacher" and the rest of the class, and Arthur was sent to join the other new scholars who had arrived, for this was "first day," a much dreaded day in an infants' school.

For the next half-hour "Teacher" was very busy, and Arthur's existence faded from her memory. It was forcibly recalled, however, by hearing a startled exclamation from the junior teacher, who was attending to the new arrivals. Looking round, "Teacher" saw her standing over Arthur with a horrified expression on her face.

"Good gracious!" she exclaimed, "this child has eaten his particulars." It was too true: there sat Arthur, with fragments of his bit of paper on the floor around him and sucking one piece with evident relish. On meeting the astonished gaze of the two teachers, he said firmly, "Butchers allus eats summat wen they'se 'ungry."

\* \* \* \* \*

Arthur was certainly not a beautiful child. He was small for his age and very sturdy. He had a square bullet head, which was kept so closely cropped that one could only speculate as to the colour of his hair. His face, too, gave one the impression of squareness and Yorkshire stolidity, relieved, however, by the tip-tilted nose of childhood, the wide ever-smiling mouth (from which the two front teeth were missing), and the

bright intelligent grey eyes. No, he was not beautiful, but his wonderful smile, overflowing with friendliness and good temper, and the quaint originality of his remarks were irresistibly attractive.

He quickly showed himself to be possessed of a vivid imagination and an insatiable love of stories, in the retelling of which he far outshone "Teacher" by the wealth of local colour he would introduce, and the variations he thought fit to add. His one aim in life was to be a butcher, and consequently he always viewed everything from what he thought to be a butcher's standpoint. Arthur's version of the parable of the Prodigal Son ran something like this: "There was once a lad who runned away from home to 'be a butcher'"—here he caught "Teacher's" warning eye and revised his statement. "Well, it worn't exactly to be a butcher, but 'e 'ad a right good time; and wen 'is money wor all spent 'e 'adn't nowt to eat, and 'is belly ached, and so 'e pinched some o' t' pig's food, but 'e didn't like that much, and 'e thowt to 'issel, 'I can get better nor this at 'ome'; so off 'e sets back, and wen 'is dad sees 'im coming, 'e yelled 'Hi! there's our Probable Son coming back; go an' kill yon fat calf, and let's all be jolly."

Another example of Arthur's power in "translating" stories is worth recording. "Teacher" had told a somewhat feeble story about some baby sparrows, one of which had strayed from the nest, fallen down a chimney, and returned home so covered with soot as to be almost unrecognizable. Arthur illuminated the scene of the return to the nest: "An' wen that there little sparrer got back Muvver Sparrer says, 'Eh! wherever 'ave yer been, ye mucky little thing? Go an' get ye washed afore yer favver comes 'ome.'"

One of Arthur's funniest remarks was also on the subject of sparrows. "Teacher" had been telling the class how, in a certain part of France, sparrows had been imported to cope with a plague of worms. Unfortunately, the sparrows multiplied so greatly that they, in their turn, became a plague. "Now, Arthur," said "Teacher," "which do you think would be the worse—the sparrows or the worms?" "Well," said Arthur reflectively, "ye see, I've never 'ad the spar-rers."

Arthur's favourite story was that universal favourite, "Alice in Wonderland," and he was never tired of following Alice down the rabbit-hole, and he always listened to the recital of her adventures with a rapt expression. On the occasion of his hearing for the first time the story of the "Caucus Race," he remarked, "Butchers would 'a liked to be there—they could 'a done such a lot o' killing."

His love for Alice, however, suffered a severe blow one day. He had evidently carried home some of her adventures and retailed them to his mother, for he suddenly remarked during one story-lesson: "Mi muvver says as 'ow she finks you ought to 'ave summat better to do nor tell us about rabbits with britches on."

Arthur was not a brilliant scholar, but he was exceedingly intelligent, and had accumulated an unusual amount of information on certain subjects, quite remarkable for so young a child. His knowledge of local botany was really wonderful. His home was in a country district, and almost every day he would bring "Teacher" an assortment of wild flowers or grasses, the names of which he knew, and could de-

scribe in detail the habitat of each. Where or how he had picked up his lore "Teacher" never discovered; but she was indebted to him for most of her knowledge of the flora of the district.

Arithmetic never appealed to Arthur at all. "Butchers," he said doggedly one day, after a tussle with tables, "never bothers about sums." It was only by placing before him the advisability of being able to count into how many pieces he had "chopped" his bulls that he was induced to attempt to learn the rudiments of arithmetic.

With reading he fared better. Books appealed to his imagination—pictures even more strongly than books—and his desire to be able to read books for himself made him quick to master the initial difficulties. Arthur did not, however, derive all his ideas from books or teaching. His mind assimilated and argued upon themes which one would not suspect in a child of five. He was one day detected in a lie. In admonishing him, "Teacher" pointed out that lying not only offended her, but also grieved God. "Well," Arthur reflected, "I don't care so much about God 'cos I don't know where 'e is." "Oh, Arthur," said "Teacher," astonished and, it must be confessed, more than a little amused, "God is in Heaven." "Is 'e?" replied Arthur; "well, I knows a lad who says he's in yer chest." Here "Teacher" felt herself getting into deep waters, and hastened to say: "Well, Arthur, you did really tell a lie, and you know what I shall have to do." "Oh, ay," responded Arthur cheerfully, "it wor a lee right enow, and tha'll 'a to wallop me, I reckon," and he thereupon extended a small and very grimy little hand to take his punishment. It was all "Teacher" could do to carry through the "walloping" with composure; but she succeeded until Arthur was properly castigated. But she was completely bowled over when Arthur wound up the proceedings by saying, "Will ye fasten mi shirt?—it comed loose when yer was a-mawlin' me."

As butchers and their trade loomed so large on Arthur's horizon, it was only natural that his best friend should be of those who follow that calling. "Joe" was his name, and many tales of this hero were retailed to "Teacher." He combined butchering with dairy-farming. His milk-round usually was timed to finish at the school-gate at "loosing-time," and Arthur would then drive home in state, as proud as any king. But, alas! the closest friendship is liable to rupture, and so it was with that of Arthur and Joe. "Teacher" noticed that she was no longer regaled with tales of the valiant butcher, and tackled Arthur on the subject.

"Well, ye see," said Arthur, very pensive, "we aren't such good friends lately." "Teacher" pressed for further explanations. "Well," replied Arthur, still pensive and gazing abstractedly out of the window, "t' other day wen I was goin' 'ome, I seed Joe's cart in t' road an' I waited an' waited, but Joe never comed, so I thowt I 'ad better take his 'orse an' cart 'ome any-way, so I whipped up!" Teacher gasped, for she knew that the road to Joe's farm led through the main thoroughfare of the village, with every possibility of an accident. "Oh, Arthur, how naughty of you! What did Joe say?" "Well," said Arthur, "wen I got near Joe's I seed his favver at t' gate, so I got out and let th'orse go 'ome by 'isself, 'cos 'e knows 'is way." Here he paused, and then added: "An' I 'aven't been 'ome that way since."

## LITTLE HOUSES.

LITTLE houses seem to me to live,  
Their little windows seem to blink,  
And sometimes, I must own to you,  
They wink  
Like little eyes.

Their little shutters painted green,  
And painted white . . .  
They close at night  
Like little lids.

The doors are mouths,  
Some large, some small.  
They ope at dawn,  
And housewives come outside  
To greet the morn  
Like little words.

I like to think the dew upon the grass  
Outside the door  
Is bloom of innocence.  
And flowers of every hue perfume the air  
With their sweet breath  
Like little sighs.

And as the dazzling sunshine speeds  
The gentle shadows fall across  
The mossy mottled wall,  
Their playful flickers do my heart enthrall  
Like little smiles.

Before the door there is the lawn,  
Whereon my little house may sit.  
It is the lap of Mother Earth,  
Its gentle nurse.

Such cottages I love;  
And they love me!  
For when they see me wave,  
The creepers on the wall wave back again,  
And beckon me  
Like little hands.

But in the night,  
When all is still,  
They sometimes seem to die.  
Their little twinkling lights go out,  
And blinds and shutters seem to claim  
Their little lives.

The night mists wind  
Their shrouds around,  
And from their little chimneys mount  
And mingle with the snow-white clouds  
Their little souls.

Thou wouldst have wept  
Hadst thou been there;  
But well I know that 'twas not death,  
But gentle night, that came to bring  
A little rest.

\* \* \* \* \*  
Some day, perchance, I shall possess  
A little cottage all my own;  
Inside the little room I'll sit  
And think I am  
It's little mind!

And when the world is bleak and cold,  
And troubles rise like very tides,  
And Hope's last string is frayed and old,  
Then in my house, what else besides,  
I trust you'll find  
A heart that's big.

FRED RICHARDS.

## CAN THESE BONES LIVE?

By DAVID SOMERVELL.

### II. HISTORY.

UNDER the above heading, an article in the last issue of this paper drew attention to the drawback history suffered from as being "all over and done with," and described a teaching device—namely, the construction of a "newspaper" on a given historical event—whereby the contemporary atmosphere might be to some extent recreated in its essentials, and also some valuable lessons in the elementary physiology of newspapers learnt—this last being perhaps the most useful feature of the performance, particularly if *two* newspapers are constructed, for it is in the falling out of newspapers that truth gets its chance, and the only hope of finding out what is going on is to read at least two.

But this plan has its limits, and the making of many newspapers would be a weariness to the flesh. On the whole, it is only adapted to boys in the Middle Form stage of secondary education. We approach now the fundamental question: Can history be made to "live," on its merits, and without the aid of adventitious classroom games?

The problem is conditioned by the fact that we have time to teach only bare outlines, and so little time to do even that thoroughly, that the teacher must reckon on the fact that the average boy will have forgotten nearly all the history he has ever done except what he did in the last few lessons, and the "baby history," so often disastrously wrong, and thus worse than useless, that he learnt before the age of, say, twelve, when memory was retentive. Thus the pleasures of history as they exist for the teacher, if he happens to know any history himself, the pleasure of being able to let the mind's eye rove at will over a vast, variegated, and impressive chronological landscape, are not for the pupil, unless he is gifted, or a specialist. Can we make history "live" for the ordinary secondary schoolboy?

It is said, "History repeats itself." Does it? For if it does, surely we have the clue. The text has been the topic of innumerable Sixth Form essays, and I do not propose here to vie with my former pupils. We may say baldly that in some aspects it does repeat itself and in others it doesn't. The repeating aspects can, however, be made to live very much more easily than the others, and these are therefore the aspects to which the teacher should direct himself.

Let me take an example: the Hundred Years' War. What is the part of the Hundred Years' War that has not and will not repeat itself? Bows and arrows. We need not trouble our heads about the details of any of the battles and sieges, though so often they are put in the very centre of the picture, and crowd out everything else. The aspects of the Hundred Years' War

that can be made really interesting, because they are really interesting, are those aspects illustrating seemingly eternal laws of politics and human nature, which are operating on a far vaster scale to-day: the attempt of a nation that has recently realized its spiritual unity to impose its government on foreign provinces: the impossibility of permanently defying national instinct: the part played by trade and tariffs in provoking wars: the financial consequences of prolonged war: the psychological consequences of the disbandment of defeated armies: the "fruits," generally speaking, both of victory and defeat. All these things are illustrated in the Hundred Years' War, and what makes them interesting is that there are more familiar illustrations nearer to us all over Europe.

One more example before I meet the objections. The history of the relations of England and Ireland are generally shoved into a corner, partly because they are thought discreditable, but still more because they seem such a wearisome tangle. Now it happens that one of the most famous pages of old Irish history presents a singularly close parallel with the history of Ireland during the last generation. Take the periods 1778-1801 and 1881-1919, and observe: the Volunteers and the Land League: the constitution of 1782 which was tried and failed, and the various Home Rule Bills which, fortunately perhaps, were not tried: the United Irishmen and Sinn Fein: Tone and Casement *versus* Grattan and Redmond: '98 and "Easter Week": the Union and—well, the Convention and the Conscription and all the rest of it, the fascination lying, of course, in the fact that the second series is incomplete.

Now for objections.

1. "We have to get the boys through the 'certificate,' and all our time is taken in stuffing them with facts." That is of course a pity, but is worth bearing in mind that, cramping as examinations are, the examiners mean well: they do not want cram, and they *profess* that boys who've learnt to use their minds as well as their memories will not come off altogether second best.

2. "This means giving half the history lesson to politics instead of history." It need not, but suppose it does: politics is history, contemporary history, and consequently the history most worth knowing. Then why not drop the history of the distant past altogether and concentrate on politics? For this reason, that the history of the distant past has the merit (not the defect, this time) of being "over and done with." We can follow, with complete dispassionateness a series of transactions to their conclusion and note the results for application.

3. "A controversial atmosphere will be introduced." It may be: if it is, education will be proceeding. This was Socrates' method. It is true he was put to death for it, but it was a glorious end, and should be imitated.

4. "These ancient and modern parallels are delusive." Here is a solid difficulty: it is true that the repetitions of history are never mechanically exact. That is where the teacher must use his judgment.

[In the next article I shall deal with English Literature.]

## SUBJECTS AND METHODS.

### Art and Industry.

THE latest pamphlet published by the Ministry of Reconstruction deals with Art and Industry. All manufacturers and educationists should read this pamphlet, for it takes a point of view not generally appreciated, but one which will have to be adopted sooner or later.

It is made clear that one of the great needs of the time is a national effort to build up our industry, not by cheapness of production, but by an improvement in the design, craftsmanship and presentation of our goods. Even so long as 1692 the value of Art training to industry was emphasized by that great architect Sir Christopher Wren. Yet over two hundred years later the nation still fails to grasp the meaning and place of Art in education and industry.

A study of the problem of so-called public taste proves that the public is not an originating force by reason of artistic demands. It is rightly held that the public cannot demand that of which they have no knowledge. Yet the general public is receptive and imitative, and will endure a considerable amount of pain and inconvenience to be in the prevailing fashion.

It is only fair, however, to admit that at the present time they prefer a charming and useful article to one which is useful but ugly.

Speaking broadly, the supply creates the demand in matters of taste.

The responsibility therefore rests mainly with the producers and distributors until such time as education has developed public taste to a full understanding of æsthetic values, and our most pressing need is to educate these people who wield an immense and autocratic power as to what shall or shall not be sold in our shops.

Therefore one of the best and quickest ways of improving public taste is to provide for salesmen and wholesale buyers special instruction in Art throughout the country, of the kind already given in the L.C.C. Central School of Arts and Crafts.

The alternative way of dealing with this question of public taste is to get at the public direct.

Much good might be done by lectures and demonstrations with actual examples, and lantern slides, of good and bad specimens of historic and modern Art work.

The lecturer would show why a thing was good or bad, and explain the principles upon which good work was achieved.

The syllabus would cover: colour æsthetics, ideals in architecture, house decoration, house furnishing, personal decoration, town planning. Some instruction on what to look for in pictures and sculpture might usefully be added.

Such a training would be helpful to everyone, whether they possessed technical ability or not. In the past, training in artistic taste has depended on the practice of some art or craft involving the possession of a natural artistic ability.

In dealing with the methods to be adopted to improve the present ineffectual direction and administrative control of art education, the pamphlet endorses the view now generally accepted by educationists that apprenticeship training must be given as a rule in our schools during the daytime, and not in the evening, when the student is mentally and physically tired; and that such training must be regarded as education in its widest sense, and not merely as vocational training.

Some far-reaching suggestions are made with regard to the general organization of our schools of art.

"To enable the schools of art to support their heavy responsibilities there must be administrative reform, and the present policy of organized competition on an unlimited curriculum is harassing and destructive. The opportunities for the development of the schools of art vary in accordance with the conditions and requirements of different districts; and although certain subjects of instruction may be capable of considerable development in certain schools, the bulk of these schools must always remain of the lower standard of achievements." This view is one which many art masters do not share, and it may be pointed out here that the average school of art does not attempt to teach all branches. Far from it.

To remove these disabilities the Ministry of Reconstruction suggests that:

"Schools of art should be grouped in areas and organized in a well ordered scheme culminating in central colleges."

Now, the National Society of Art Masters have gone very thoroughly into this question of grouping and grading, and although they recognize that some system of grouping of schools is necessary, they strongly object to the drastic limiting of the curriculum of all but a few of the more fortunately situated schools; because they consider that such limitation would result in loss of initiative, and penalize to an unnecessary extent the great majority of districts.

The N.S.A.M. suggest that the range of the schools in a national scheme should be classified as—(a) Minor schools affiliated to schools of arts and crafts, art classes, and art classes in junior technical institutes; (b) trade schools; (c) schools of art and crafts; (d) provincial colleges; (e) the Imperial College of Art.

The whole of these schools should be linked together by means of scholarships, with maintenance allowance where necessary. Under this scheme the present fully recognized schools of art would retain the greater part of their curriculum, but would not attempt to give advanced instruction in the application of art to industries not existing in their districts. Neither would they expect to complete the education of an art master, but would depend on provincial colleges or the Imperial College of Art for graduate courses. Another alternative, but one which has not yet been considered by the N.S.A.M., would be for the country to be divided into areas, and the recognized schools of art in each area, after consultation and consideration of local requirements, should by agreement each specialize in one particular branch of art work, and the advanced students from each district should be transferred to the school which specialized in the subject required.

It is apparent that the question of organization is one needing the earnest consideration of the authorities concerned.

Geo. C. DUXBURY,  
National Society of Art Masters.

### Civics and Eugenics.

THE Committee of the Summer School of Civics and Eugenics has arranged to hold its second school in August, during the first two weeks. The centre selected for the meeting this year is Cambridge. The Vice-Chancellor has kindly placed the University Arts School at the disposal of the Committee, and all lectures, seminars, the exhibition of books and surveys, the Students' Library, Common Room, &c., will be under the same roof. In addition, the Lecture Theatre of the Botanical School will be available.

The programme will fall into two portions, the first week being devoted to a preparatory course, dealing with the scientific bases of educational and social work, and the lecturers of the second week dealing with special applications of civics and eugenics to the work of the teacher and social worker respectively. Advanced courses for selected students will be organized in biology, philosophy and theory of citizenship, and practical psychology. These courses will only be held if sufficient students apply. They will be required to satisfy the lecturers taking the courses that they have sufficient knowledge to be able to avail themselves of this more advanced work. As previously, the National Council for Combating Venereal Disease will organize a Speakers' Course, and a Speakers' Course in Citizenship will also be included this year. The Regional Association will organize a survey of Cambridge during the fortnight, and a Eugenic and Civic Exhibition will be under the direction of Mr. Harold Peake. A Publishers' Exhibition and a Lending Library for students will be arranged.

Hostel accommodation will be under the personal supervision of Miss Elizabeth Clark. Those desirous of obtaining further particulars of the School should apply to the Secretary, Summer School of Civics and Eugenics, 11 Lincoln's Inn Fields, London, W.C.2.

## CHRONICLE OF EDUCATION.

- 18 March.—The Standing Committee of the House of Commons decided that all the powers and duties of the Board of Education with respect to the medical inspection and treatment of children and young persons should be transferred to the new Ministry of Health.
- 25 March.—Annual Conference of the National Education Association. Report submitted that there were few signs of any well-informed opinion in the country to bring the Education Act into operation.
- 25 March.—Prof. C. W. Oman (Co. U.) elected as member of Parliament for Oxford University.
- 26 March.—First meeting of the newly elected Education Committee for London. Sir Cyril Cobb appointed Chairman and Mr. H. L. Liversedge Vice-Chairman.
- 27 March.—Visit of the King and Queen to the Central School of Arts and Crafts, London.
- 28 March.—Conference of Wardens of Settlements, held at the Passmore Edwards Settlement, with the object of forming an Association to take part in aiding research into social questions. Address by Mrs. Humphry Ward.
- 7 April.—Dr. P. D. Innes, Principal Assistant to the Chief Education Officer for London, appointed as Chief Education Officer for Birmingham.
- 9 April.—Education Estimates for 1919-1920 issued. Increase of fifteen and three-quarter millions. University grants trebled.
- 10 April.—Announcement that the Ramsay Memorial Committee have offered £25,000 to the University of London to aid in the foundation of a Laboratory of Chemical Engineering.

### American Soldier Students in Manchester.

A number of American soldier students have arrived for the opening of the spring term at Manchester University. The party consists of twenty-four officers, thirty-four non-commissioned officers, and twelve other ranks. All, or nearly all, have been at one or another of the American Universities and about half are graduates. They have all been in France on active service, and they belong to different corps. A few will be on the medical side, but the greater number are to attend lectures and receive tuition on such special subjects as those taken at the Municipal College of Technology in textile courses and industrial administration. Engineering, including sanitary engineering, and chemistry are among the subjects which will be taken up. Captain Paul V. Brown, of the Engineering Corps, is in command of the detachment, and the adjutant is Lieutenant Proctor.

The men intend to form two baseball teams during their stay in Manchester.

## SCHOOLS, COLLEGES, AND UNIVERSITIES.

### University College, London.

The Annual Report of University College, London, has just been issued. Whereas in normal times the total number of students, day and evening, amounts to about 2,200, the report shows that the number last session was 1,071. This number included 21 officers and men who attended special courses provided for members of H.M. Forces and 67 who attended special vacation courses, so that the actual number of ordinary students was 983, of whom 573 were women. The report further shows that the fee revenue last year only amounted to £13,581, as compared with a normal fee revenue of between £29,000 and £30,000 a year. War economies of every kind have been maintained, and expenditure has been deferred wherever possible. The financial position continues, however, to be a difficult one, and unless further help from the Treasury is forthcoming, there will be a deficit on the College Establishment Account of nearly £13,000 at the end of the current session.

The report refers to the many War activities of the College, and shows that special courses have been arranged in all faculties to meet the needs of students returning from War service.

The work of the Department of Italian, under Prof. Cippico, has been extended, and the newly instituted Department of Scandinavian Studies has made a good start. In these, as in most of the departments of the College, the ordinary courses have been supplemented by useful public courses. The appeal for funds for the institution of a Chair of Dutch Studies has met with a ready response, and the Committee charged with the matter hope shortly to complete their work; they still require about £5,000.

The total number of past and present members of the College who have undertaken War service now stands at 2,650. A final issue of the Pro Patria List will be published as soon as possible, and will include the names of 253 who have fallen in the War. A War Memorial Committee has been formed, and a scheme for the memorial will be issued shortly.

### St. Andrews University.

The Trustees of the Walker Trust (associated with the University of St. Andrews), who a little over a year ago awarded prizes for essays on "Prayer," and whose invitation to all persons throughout the world to contribute essays for these prizes created great interest at the time, are now issuing an announcement of a group of prizes offered for essays on "Spiritual Regeneration as the Basis of World Reconstruction." The prizes offered include four students' prizes of £25 each, four workers' prizes of £25 each, and an open prize of £200. In the case of students and workers, the prizes offered are allocated to four divisions—one to Great Britain and Ireland, one to other parts of the British Empire, one to the United States of America, and the fourth to other countries. Those who wish to obtain copies of the announcement of the conditions and the prizes offered should apply to the Secretary of the Walker Trust, Rothes, Markinch, Fife, Scotland.

A representative selection of the essays on "Prayer" will be published in the autumn of 1919 by Macmillan, under the title "The Power of Prayer." The volume will contain a study of the essays as a religious and theological document by the Rev. W. P. Paterson, D.D., Professor of Divinity in the University of Edinburgh.

### Birkbeck College, London.

On the invitation of the Governors of Birkbeck College, London, Lord Haldane has accepted the position of President of the College, in succession to the late Lord Alverstone.

## PERSONAL NOTES.

**Director of Education for Cheshire.**

At a meeting of the Cheshire County Education Committee, Mr. Charles Francis Mott, of Stafford, Assistant Secretary and temporarily acting Director for Higher Education to the Staffordshire Education Committee, was appointed Director of Education for Cheshire at a salary of £1,100 a year. There were 139 applicants.

Mr. Mott is 41 years of age, was educated at Reigate Grammar School, King's College, London, and Trinity College, Cambridge, and holds the M.A. degree.

**New Cambridge Professor of Physics.**

Sir Ernest Rutherford, F.R.S., was elected on April 2nd to the Cavendish Professorship of Experimental Physics, rendered vacant by the resignation of Sir J. J. Thomson, O.M., Master of Trinity, who had occupied the chair since 1884. The first occupant of the chair, in 1871, was James Clerk Maxwell, who was followed by Lord Rayleigh, now Chancellor.

Sir Ernest Rutherford was born at Nelson, New Zealand, in 1871. From New Zealand University he proceeded to Cambridge in 1893, where he took his degree as a research student, and gained the Coutts Trotter Studentship in Natural Science in 1897. Doctors' degrees have been conferred upon him by several Universities. He has been Bakerian Lecturer at the Royal Society, Rumford Medallist, Barnard Medallist, Bressa Prizeman, and Nobel Prizeman for Chemistry. For nine years he was Macdonald Professor of Physics in McGill University, and then became the Langworthy Professor of Physics and Director of the Physical Laboratories at Manchester University.

**Lecturer in Social Science at Liverpool.**

The Council of the University of Liverpool have appointed Miss Lloyd Davies to the Lectureship in Social Science. Miss Lloyd Davies graduated at Cambridge with honours in modern and medieval languages, and since then has taken the M.A. degree of Liverpool in Philosophy.

**Professor C. E. Inglis.**

The Chair of Mechanism and Applied Mechanics rendered vacant at Cambridge by the death of Professor Bertram Hopkinson has been filled by the appointment of Mr. C. E. Inglis, Fellow of King's College and University Lecturer in Mechanical Engineering.

Professor Inglis was educated at Cheltenham and bracketed 22nd Wrangler in 1897. He gained a First Class in the Mechanical Sciences Tripos, Part I, in 1898. He was the inventor and constructor of certain bridges which have been used extensively during the War. His war services have been twice mentioned in despatches, and he gained the rank of major.

**The late Miss Edith Williams.**

Miss Edith Williams, news of whose death, after a short illness, comes from Paris, will be a great loss to educational circles in England and France. Professor of English at the Women's Colleges of Fontenoy-aux-Roses and Sèvres since their foundation, Miss Williams was always an enthusiastic supporter of a true understanding and friendship between Britain and France. She founded, and was the first President of, the International Guild, which from small beginnings in her drawing-room has grown to be an officially recognised centre, with upwards of four hundred students, for French girls studying English, as well as for women of all nationalities wishing to study French. This work made her well known to many English teachers.

Miss Williams also initiated the system of exchanging French and English student-teachers, and for this and other services to education she was, in 1914, made a Chevalier de la Légion d'Honneur, being at that time the only English woman to be so honoured. Miss Williams belonged to an old Quaker family, being a daughter of the late John Williams, of Dudley.

**Todmorden's new Director.**

Mr. James Edward Cuthbertson, Newcastle, has been appointed Director of Education at Todmorden, Yorkshire.

**Mrs. Murray of Westminster.**

Mrs. Murray, Headmistress of the Burdett-Coutts and Townshend School, Westminster, retired at the end of March, after fifty-eight years' service. She entered the school in 1861 as a pupil teacher, and has been head mistress for the past twenty-one years.

**Dr. Peter D. Innes.**

We learn that the Special Committee appointed to interview candidates for the post of Chief Education Officer for the City of Birmingham agreed to recommend the appointment of Mr. Peter D. Innes, M.A., D.Sc., Principal Assistant to Sir Robert Blair, the Chief Education Officer for London. This recommendation has been accepted by the Birmingham Education Committee, and Dr. Innes will enter upon his new duties in May.

**The Late Mr. Francis Storr.**

It is with very great regret that we record the death of Mr. Francis Storr, which occurred at his house in Mecklenburgh Square on Tuesday, April 8. He had reached the age of eighty years, having been born February 28, 1839, in Suffolk. He was the son of the late Rev. Francis Storr, and was educated at Harrow and at Trinity College, Cambridge, which he entered as a scholar in 1857. He graduated sixth in the Classical Tripos of 1861, obtaining the Bell University Scholarship. From Cambridge he went to Marlborough as an assistant master, remaining there from 1864 to 1875. During this period he made himself specially proficient as a teacher of French and German, and from Marlborough he proceeded as Master of the Modern Side in Merchant Taylors School, remaining there till 1901, where he finally retired from active teaching work. He played a large part in modernizing the work of the school, and many of his former pupils have attained to distinction, among the number being Mr. F. S. Marvin, now a Staff Inspector under the Board of Education.

Mr. Storr belonged to many societies and associations. He was a Fellow of the College of Preceptors, an active member of the Teachers' Guild, a member of the first Registration Council, and also of the present one during the first three years of its existence. He was Vice-President of the Modern Language Association, and Vice Chairman of the Women's Training and Registration Society.

For many years after his retirement from school duties he was probably far more busy than most acting schoolmasters. He is best known in connexion with the *Journal of Education*, of which he was the proprietor and editor for some fifty years, until it was purchased by Messrs. Macmillan in 1918. Under Mr. Storr's able control, the *Journal* exercised considerable influence on educational opinion, chiefly in the direction of promoting modern studies, the professional training of teachers, and the establishment of a united teaching profession. The claims of women teachers also received special emphasis, and the monthly "Occasional Notes" were always marked by shrewd and sometimes biting comment, for the editor was not inclined to spare those who seemed to him to be standing in the way of educational reform, and against such people he wielded a skilful pen with a zest which he did not trouble to conceal.

The conduct of his journal probably left him little time for general writing, but he prepared editions of Heine's "Travel Pictures," Lermontoff's "Demon," Bacon's "Essays," and also a memorial volume entitled "Life and Remains of R. H. Quick," in which he paid fitting tribute to one of his greatest friends.

He leaves a widow and four children. One of his daughters is the wife of Mr. A. D. Lindsay, Fellow of Balliol College, Oxford.

## BLUE BOOK SUMMARY.

### CIRCULAR 1102.

#### The Staffing of Continuation Schools.

In Circular 1102, issued on April 4, the Board of Education give some suggestions for the use of Education Authorities in planning how to staff their Continuation Schools. The memorandum falls under thirteen heads. It begins inevitably with a consideration of the problem of supply of teachers, pointing out that a complete system of Continuation Schools, if started now, would require 32,000 teachers at the end of three years, assuming classes of thirty on the average, and teaching hours of twenty-four a week. The actual start will be gradual, however, and it may be possible to recruit teachers in stages. It is rightly urged that an ill-service to education will be done if teachers are taken from existing schools in any large numbers. Individuals may find the new work better adapted to their powers, but every transferred teacher will leave a gap in the elementary or secondary schools, thus giving rise to a fresh problem of supply. The Board hopes that teachers for Continuation Schools will be found among the men and women who have acquired a new zeal for social service through the experiences of the war.

Happily, as we think, the Board is alive to the danger of trading upon the idealism of amateurs. It lays down the sound principle that the teachers must be paid properly, and directs the attention of authorities to the Report of the Committee on Salaries in Secondary Schools. It adds that all the arrangements should be such as will not impede the ready transfer of teachers from one type of school to another. "It is in all respects undesirable that the teaching profession should be divided into watertight compartments." The teachers in Continuation Schools should have common rooms and other amenities.

#### Sources of Supply.

It is suggested that these will be found, in regard to teachers of general subjects, first in the turnover of Secondary and Elementary School teachers. Second, in the ranks of those educated persons who have been teaching in evening schools as a spare-time occupation and may now adopt teaching as a profession. Young men and women who have been conducting youths' clubs, scout or guide troops, or who have been attending classes under the Workers' Educational Association. Finally, of course, we have mention of the officers returning from the Army—that widow's curse of all reformers. It is admitted that these sources of supply are quite inadequate, and the Board rightly insist that the Universities must furnish the main body of recruits. Cogent reasons are given for this view, and it is added that the Board's regulations for the training of teachers will be expanded so as to provide grants for the training of graduates as Continuation School teachers. Universities are invited to submit schemes, and Local Authorities are asked to say how many teachers they will need at convenient dates during the next two or three years. It should be added that the Board point out that the professional training should be supplemented by some opportunity for gaining knowledge of industrial and social conditions. "The teachers of the people must know how the people do their work; they must know the habits of their homes and what kind of recreation they prefer in their moments of leisure." And again: "In planning their training courses, the Universities must come out into the marketplace." All this is sound doctrine, for it is well to recognize at the outset that the new Continuation Schools for adolescents must be conducted and staffed by men and women of real and mature power. Let us have idealists, but no *dilettanti*.

#### General and Specialist Teachers.

For those teachers who are transferred from other schools, no long course of training will be necessary, but some will require short courses of further study in the subjects they propose to teach. Discussions, lectures, and visits to fac-

tories are suggested. Those who have not had teaching experience, and whose general attainments are below some such level as that of the Higher Locals, will need a course of study in their subjects, followed by a full year's training in teaching. This latter will probably have to be conducted on new lines by instructors who have given special attention to the problem, but some of the existing Training Colleges may give valuable help.

The case of the specialist teacher presents many difficulties. In some branches, such as Domestic Science, Art, and Physical Culture, there are courses of training already provided. These might be modified to suit the needs of teachers in Continuation Schools. In technological subjects, however, the Board suggest that Local Authorities should institute full-time or part-time courses in professional training in the Technical Institutes. This method would have the great advantage of enabling skilled craftsmen who desired to become teachers in Continuation Schools to receive instruction in the methods of teaching their own subject while studying also the general principles of education. These should certainly receive attention in order; we may take the risk of having too many teachers who think that their own subject forms the centre and circumference of all education.

#### The Experimental Stage.

It is recognized that the early years of the Continuation Schools must be a period of trial, with some failures. The rural districts will be especially difficult to work, but the Board suggest that a grouping of neighbouring villages and the employment of visiting teachers may help to overcome the difficulties. It is further suggested that a wise organization and combination of effort may furnish opportunities likely to attract men and women of ability. In this suggestion we see the germ of a new development leading to the establishment of educational parishes, with incumbents charged with the cure of minds.

Meanwhile the whole business of starting the Continuation Schools is attended by a paradox. The schools cannot start without teachers. Teachers cannot be obtained unless a prospect of reasonably secure employment is offered. The Board suggest that this vicious circle may be broken to some extent if the compulsory provisions of the Education Act are anticipated by the establishment of Day Continuation Schools on a basis of voluntary attendance. Many employers are willing to help in this way, and the Board express the hope that Authorities will do their best to encourage the movement, since it will make possible both the early absorption of trained teachers as they become available, and also afford excellent practising ground for those still in training.

#### Aims of Continuation Schools.

An important section of the Circular draws attention to the fact that Continuation Schools must differ in many respects from both Elementary and Secondary schools; from the former in the age of the pupils; from the latter in the educational aims of the pupils; from both in the restricted time for study. The younger students in Continuation Schools will be children in years, but they must not be taught or disciplined in the manner adopted for ordinary school children. Instruction and control must alike be governed by the fact that they are wage-earners. The curriculum must aim at the cultivation of physical vigour, the training of character, the exercise and development of intellectual power, the fostering of a civic spirit, and the quickening of imagination.

#### Conclusion.

Altogether this is an excellent Circular, marked by that note of enthusiasm which has distinguished several of the more recent official publications of the Board. We have even a quotation from Blake—slightly garbled, it is true, but still a welcome and refreshing thing to find in a Government circular. Following the recent Memorandum to Local Authorities on "Schemes of Work," this Circular gives still further evidence of the Board's determination to make the Education Act of 1918 a real measure.

## EDUCATION ABROAD.

**The United States Children's Bureau.  
By Miss Julia Lathrop, Chief Children's  
Bureau, United States Department of Labour.**

[EDITORIAL NOTE—This article, by Miss Lathrop, outlines some of the efforts of the United States Government to protect and conserve its child resources. Miss Lathrop is a well known leader in reform and a student of education and welfare work. She has been associated with Jane Addams, in constructive social work in Hull House, Chicago. She is a graduate of Vassar College, and in her leadership of the child work of the Bureau has introduced scientific methods of research in the approach to social problems.]

For the last six years the United States Government has carried on work for child welfare through the Children's Bureau of the Department of Labour, thus recognizing that the welfare of all children is a public responsibility.

The last report of the Children's Bureau sums up the results of six years' study of the social causes of infant mortality. It shows that as the earnings of the father increase, the infant mortality rate becomes more favourable. The studies also demonstrate the great importance of the mother being at home with the nursing child, and show that the death rate is about double if she is obliged to leave the child to supplement the family earnings. Studies in rural neighbourhoods show that there is an unnecessary waste of both maternal and infant life because of the remoteness from physicians and nurses and the cost of securing medical service.

Ignorance of the best ways to care for children exists among the rich and poor alike. The Bureau has resorted to many methods of publicity, in order to make clear the rights of the child and the way to secure them. The second year of American participation in the War was known as Children's Year. It was dedicated to educational efforts to secure an understanding of the care necessary in order to give the children of the nation a fair chance. This effort was especially sanctioned by President Wilson in a letter, in which he expressed his hope that the work would so develop as to "set up certain irreducible minimum standards for the health, education, and work of the American child."

The Children's Bureau enjoyed the co-operation of the Women's Committee of the Council of National Defence in the work of Children's Year. This volunteer organization represented more than 17,000 committees and about 11,000,000 women. Its first act was a nation-wide weighing and measuring test of babies and children too young to go to school. This test was entirely voluntary, but more than 6,000,000 children were weighed and measured, and those who were shown to be under normal were referred to physicians, hospitals, or clinics. This simple test resulted in great increase in the demands for public health nurses, *i.e.*, nurses who are paid for by the community, preferably by public funds, and who travel from house to house upon call. Such nursing service is especially valuable in the vast rural areas of the United States.

The Bureau is directed to investigate the employment of children, and at the present time is especially directed to make the inspections necessary to secure the enforcement of the child labour standards set forth in Government contracts, which require that no child under fourteen shall be employed at all, and that no child between fourteen and sixteen shall work for more than eight hours a day or six days a week, or before six in the morning, or after seven at night.

It is recognized that the best child labour law is a good school law, and, as one activity of Children's Year, the Bureau is now carrying on a Back-to-School Drive. High wages and high cost of living have led many children to leave school for work, and the Children's Bureau hopes to be able to make plain, through the local child welfare committees which have co-operated in the previous drives of Children's Year, that it is to the advantage of the individual children and of the nation that children be kept in school now, and made ready to meet the exacting requirements of the years after the War.

## OUR STATE INSPECTION.

By A PRIVATE-SCHOOL TEACHER.

ALL right. Very good. Quite fair. We were amused when the little man with the big notebook appeared during school hours the other morning. The head mistress was busy at that time, of course, but there he was, demanding to know the average number of attendances made in the school. Two of us buzzed round him. He was such a mild little man, and so eager to assure us that we were not going to be ruined. We nearly gave him breakfast, I believe; we felt so friendly. We might not be grateful, but we felt we had nothing to be ashamed of at X.

A week later the little fellow called again, with the same reassurances and the same gentle manner, to ask another simple question. He said some people were "so indignant!" I think he did not like his job. Certainly I should not, would you?

He will come to us again. We always did have the windows open, and we do not teach on the most ancient methods, so it will be good fun to see him popping in. Think, too, he comes from the Educational Authorities! We are honoured. Cheer up, Private Schools!

His visits have made me think, however. If the school is to be turned inside out and upside down, figuratively speaking, because of its grave responsibility, what of the mother? What of the father?

In almost every treatise written about education there comes a word or a sentence, a paragraph or, more frequently, a chapter to say that the *child's beginnings are so important*. Home training: the greatest factor in the upbringing of children.

Then I ask, why do we not insist upon an examination of every married man and woman as to his or her ideas upon the training of a child? It seems to me that the State could insist upon a definite course of instruction for parents soon after marriage. If we do have State education for children, let us have it for them before they are born. Often they must be born again, as every teacher knows, when they come to school! If parents were put through a compulsory examination on child nurture, perhaps the men and women of England would be less likely to marry for fun?

THE SCIENCE OF COOKING AND HEATING.—As an undoubted gas-saver, the Florence Patent "Record One-ring Table Cooker," introduced by the London Warming and Ventilating Co., Ltd., has quickly achieved great popularity, its many advantages over those of various imitators being pronounced and obvious; but the inventor, Mr. A. P. Florence, has recently succeeded in combining with the "Record" one-ring cooker the valuable addition of an ample hot-water service—sufficient not only for the washing of dishes, &c., but for a small bath for the children, as, whilst cooking the daily meals of the family, the ring is at the same time heating an ingeniously constructed boiler beneath the hot plate connected to a 15-gallon cylinder. For the convenience of those without gas supply, the Cooker may be used in conjunction with a specially designed lamp, and for large establishments a larger size is made with a double hot plate and oven.

A SENSIBLE PICTURE SHOW.—Mr. Herbert G. Ponting's exhibition of moving pictures, taken during the Scott Expedition to the Antarctic, continues to attract large audiences to the Philharmonic Hall. No better afternoon's entertainment is to be found for children during the Easter holidays.

## ASSOCIATION NEWS.

**Teachers Registration Council.**

Up to and including Tuesday, April 8, the number of applications for admission to the Register was 26,500.

Recent applicants have included many who are engaged in teaching in private schools. Such teachers should note that the Conditions of Registration provide that up to the end of 1920 admission to the Register may be gained on the ground of experience alone, without regard to academic qualifications or training in teaching. The experience submitted must, however, be satisfactory to the Council, not only in its duration (five years being the minimum) but also in its character. The Council accepts such experience only as is shown to have been obtained in schools of good standing. A form of inquiry respecting the school is sent where the Council desires fuller information. It must be understood also that where a school is accepted as a place wherein experience is valid for registration purposes, this acceptance carries no official guarantee, nor does it affect the school's position under the Education Act of 1918. The Registration Council is not concerned primarily with schools, but with teachers.

Applications respecting the recognition of schools for purposes connected with State grants or pensions should be addressed to The Secretary, Board of Education, Whitehall, S.W.1.

**The College of Preceptors.**

The Council, at their meeting on March 29, decided to invite private and other non-State-aided schools to apply for affiliation to the College, and the Standing Committees were requested to frame the conditions of affiliation and to arrange for furnishing to the affiliated schools information and advice on points of interest, including the position of such schools in relation to the Education Authorities. It was referred to the Finance Committee to consider the question of drafting a pensions scheme for teachers engaged in private and other non-State-aided schools. The following resolution was adopted:—

"That the Council feels that the unification of the teaching profession is seriously threatened by the incidence of the Teachers' Superannuation Act, and urges the Teachers Registration Council to promote the policy that all registered teachers in efficient schools shall be eligible for the State pension."

The Council considered the progress that had been made towards the setting up of a Joint Educational Council, and referred the question of taking further steps to the Future Policy Committee. The diploma of Licentiate was granted to Henry Hope Buswell and Leo William Thomas Cooper, and the diploma of Associate to Austin Henry Cooke, Annie Hildegard Ludford, and John Rhodes. The Examination Committee was requested to revise the regulations for the diploma examinations, with a view to meeting the needs of teachers of special branches. Miss Bennell was appointed one of the College representatives on the Joint Scholarships Board. Fourteen new members were elected, and it was resolved that holders of the College diplomas desiring to become members should not in future be required to obtain the signatures of proposers. It was decided to arrange for a dinner for members and their friends in commemoration of the seventieth year of the incorporation of the College by Royal Charter.

At the General Meeting, held on the same day, the reports of the Council, of the Dean, and of the auditors were adopted, and the following were elected members of the Council: Prof. J. W. Adamson, Mr. S. Barlet, Miss H. Bathgate, Miss M. Bennell, Mr. G. B. Bennett, Mr. A. D. Hardie, Mr. J. L. Holland, Mr. S. T. Shovelton, Rev. C. J. Smith, Mr. O. Sunderland, Mr. B. B. Thompson, and Mr. F. J. Whitbread, Mr. H. Chettle, Mr. J. Blake Harrold, and Mr. S. J. Walters were appointed auditors.

## LETTERS TO THE EDITOR.

**Eurhythmics.**

*To the Editor of "The Educational Times."*

SIR,—No one, least of all M. Dalcroze, has suggested that "the bulk of the best music is in need of or suited for" plastic movement. Very little music written for one instrument is suited to another. The system of M. Dalcroze is based on the common experience that children—indeed, not children alone—learn best through the happy effort of creating or re-creating. The very word Art, as opposed to Science, is understood as creative activity in the sense of actually making something to be apprehended through the senses. Is "Musicus" satisfied that a sense of music is generally taught in schools at all? Usually, what is taught is the technique of the piano, the very worst instrument, because the pupil can master to some extent this technique without ever being able to distinguish musical tone at all. If a sense of musical rhythm is to be cultivated, it can be done only by teaching children first to hear musical tone and time and then to make something—a tune, a song, a dance, some sort of pattern or rhythm. Plastic movement can produce rhythm in time only, a musical instrument is required to produce tone harmonies. But the basis of musical rhythm is time, and if you can get a class to hear rhythms in time and to produce them with their bodies, they have gone a long way towards understanding and love of music. Song is another way just as good, but in how many schools is singing properly taught, or taught at all so as to make of the voice a musical instrument? Everyone has a voice, everyone has a body. Some will like to use one and some another for the making of their rhythms. It is quite certain that many who cannot sing in time can move rhythmically.

Most children—not all—enjoy eurhythmics, it is best taught in classes, and any failure is immediately seen and felt. Eurhythmics is one part of a complete musical training as conceived by M. Jacques Dalcroze, one way of entrance to the kingdom of musical rhythm, and its use is recognized by many teachers.

If "Musicus" will disclose himself to me I shall be glad to send him some publications of the Dalcroze Society, and when he has read them perhaps he will say what he then thinks.

M. L. ECKHARD,

Hon. Sec., Dalcroze Society of Great Britain and Ireland.  
March 3, 1919.

*To the Editor of "The Educational Times."*

DEAR SIR,—Confusion is in the mind of "Musicus" when he speaks of rhythm of movement as distinct from rhythm of hearing. All rhythm is movement, however complex. A conductor beats time for the most highly developed rhythms. It is M. Jaques' vision of the physical origin of musical rhythms which makes his teaching of such educational importance.

"Musicus" is unlucky in his music-teacher friends. As a humdrum school music-teacher I have found no means of developing musical feeling and teaching rhythm equal to the exercises of Dalcroze—above all, for the dull children.

Rhythm in an infectious passion. A child can catch it best, along with his fellow-pupils in a large room, from his teacher while she plays.

One would like to have "Musicus" prove that anything formerly existed, except the conductor's beating, at all resembling the movements invented by Dalcroze. Compared with tapping, clapping, and marching they are not merely "more graceful," but more truly educational.

There are difficulties connected with the establishment of eurhythmics in the curriculum, and no doubt the Miss Murgatroyds are a nuisance. But difficulties and Murgatroyds are stimulating.

ALICE WORTHINGTON,

13 Viewforth Gardens, Edinburgh.

# SUPPLEMENT.

## SOME NOTES ON THE TRAINING OF THE TEACHER.

### **The General Question.**

When the unification of the teaching profession becomes an established fact, we shall probably look back with some wonder at the time when teachers themselves were divided in opinion as to the necessity for some technical training in their craft. Certainly it is difficult to understand how teachers could ever have been found to maintain that their work required no technical qualification, but could be accomplished by any person of sufficient intellectual capacity to acquire a measure of knowledge somewhat in advance of that required of his pupils. The conditions which brought about this state of mind were probably derived from the fact that teaching has always been thought to depend for its success chiefly upon the teacher's own attainments, fortified by qualities which are summed up in the one word "personality." The earliest efforts to provide training in England were not directed towards a training in teaching in the broad sense, but rather towards instruction in the details of some particular method. Down to the middle of last century, young men went to the British and Foreign School Society's College in the Borough Road for a short course of three months, during which they were supposed to acquire a mastery of the Lancasterian, or monitorial, system. Incidentally, no doubt, they did learn something of the general principles of teaching, but the main idea was that they were learning a method, and to this day the official term "Master of Method" reminds us that the Lecturer on Education in a training college was not so much concerned with the principles of teaching as with their application in the classroom.

### **Training for Elementary-school Work.**

One unfortunate result of confining the training of teachers to those intended for work in public elementary schools was to give rise to the notion that teachers in secondary schools were in some way absolved from the necessity of undergoing any training in teaching. This exemption it was sought to justify by asserting that the pupils in a secondary school came from an environment wholly different from that of the pupil in the elementary school, that more importance attached to the teacher's own knowledge, that the classes were usually smaller, and that the secondary school existed to give a definite training in character, whereas the elementary schools were mainly concerned with communicating the rudiments of knowledge. The scepticism concerning the value of training for secondary-school work has been strengthened by the circumstances under which it has been carried on. The University institutions have done their best under the handicap of a totally insufficient grant from the Board of Education, seconded by the still more serious drawback that head masters of public schools have openly declared their preference for men who have not taken a course of training. The young graduate who intended to take up teaching has, in the past, found that he could obtain an important post without any difficulty, provided that his scholarship and athletic record commended themselves to his future Head. If he contemplated taking

a course of training in teaching, he had to remember that such an enterprise involved an additional year in the University, with its attendant expense and, so far as he could gather, no corresponding advantage in his professional career.

### **The New Position.**

A new situation has arisen by reason of the fact that the current Regulations of the Board of Education for the Training of Teachers have departed completely from the former practice of treating the preparation of teachers for elementary schools as a thing wholly apart from the training of teachers for secondary-school work. In future, an intending teacher may elect to take as part of his ordinary training course such special subjects as will prepare him for the work to which he looks forward. This is a great advance towards the idea of a unified teaching profession, and although we shall certainly require specialist courses of training, these will come to be regarded more and more as in the nature of additions or postscripts to the preliminary training which will properly be similar in kind for all types of teaching work. The recognition of the fact that there is an element of professional equipment common to all kinds of teaching is essential if we are to break down the barriers which have hitherto existed between the various branches of the work. It is true that this common element is perhaps not yet very substantial in amount, but it is for the profession itself to provide a remedy by turning its attention towards securing a high degree of technical efficiency in all whom it consents to regard as members of its own body, for a profession does not exist merely to secure rights for those who follow it, it exists also to ensure the fulfilment of duties and the maintenance of a high standard of work.

### **Specialist Teachers.**

In every case it should be laid down that the young aspirant should secure a good general education, and a means of testing this will be provided as the work of the Secondary Schools Examination Council develops. The further preparation should be associated as far as possible with the Universities, and this applies to general or form teachers in both elementary and secondary schools. In many cases also the Universities will be able to provide the special courses required by those who intend to devote themselves to the teaching of one subject or of one or more allied subjects. This applies especially to English, Classics, Modern Languages, Mathematics, and Science. There will, however, be need also for teachers of Physical Culture, Domestic Subjects, Art, and Handwork. Although it may be that ultimately young graduates of our Universities will decide to take up one or more of these special branches, one can hardly suppose that in the immediate future the Universities will provide the necessary instruction. The current Circular (1102) on the Staffing of Continuation Schools indicates one method of dealing with this problem by suggesting that the existing training colleges should be used to prepare teachers of this type. It is essential to secure that such preparation shall cover a period

sufficient to allow for the students' gaining a mastery of the subject and a general knowledge of the principles of teaching in addition to a special knowledge of their application in the subject chosen.

### The Content of Training.

It is necessary to revise our ideas of what a training in teaching really includes. In the past it was often held to be sufficient if the student had at his tongue's end some textbook phrases relating to psychology, together with some approved maxims relating to what was called "school method." This latter generally consisted of phrases such as "from the known to the unknown," "from the simple to the complex," or "things before words," all much too condensed and definite to be accepted without question by an experienced teacher, although they were imbibed with a somewhat pathetic fidelity by generations of students undergoing the process of "training." In place of such uninspired and uninspiring *dicta*, the young teacher should have his attention directed towards the ascertained facts concerning the working of a child's mind, and he should have sufficient knowledge of the scientific processes by which these facts have been obtained to enable him to understand their application to his own particular circumstances. His teaching method must be peculiarly his own. He cannot, save in the most general way, adopt the methods of other teachers with any hope of success. It is this personal quality in teaching which makes it, for the right people, an enjoyable occupation. The same quality, since it is essential, has been adduced with some show of reason as an argument against any attempt to give teachers a professional training, and this view has too often been supported by the manifest efforts of the training colleges themselves to turn out teachers cut to one pattern instead of turning out craftsmen endowed with the power of adapting themselves to circumstances and possessed of a knowledge of principles in place of a mere equipment of second-hand precepts.

### The Need for Practice.

Before the teacher's training can be regarded as complete, there should be ample opportunity for practice under skilled guidance. It is an old saying that no training college can train a teacher and that the best it can do is to put him into a position to train himself. This is true, but there is no reason why his early efforts in the direction of training himself should not be helped by wise counsel from those of greater experience. As part of the training course the student should deliver lessons and help in the general conduct of a school. His efforts should be criticized from time to time, and he should be invited to pass his own opinion upon his performance. This latter is

highly important, for teachers are especially prone to lose the power of criticism since their work is carried on in the presence of children whose criticism is acute enough but is discreetly suppressed. Those who teach senior boys and girls in our secondary schools might often obtain valuable help and a measure of salutary guidance by inviting their pupils to set down frankly and clearly their view as to the teaching methods in the form. In the practising school the criticism will be supplied by the regular members of the staff and by the supervisors of training, and the student should be ready in every case either to justify his procedure or to admit its failure.

### Supplementary Training.

It is a fallacy to suppose that the training undertaken by a teacher at the start will endure in its effects throughout an ordinary teaching career. Further training will be necessary to enable the teacher to keep abreast of new movements. Opportunity for such further training should be provided in the form of vacation terms, during which the teacher should be expected to carry out a prearranged programme of study, not necessarily on pedagogical lines, but certainly on lines which will lead to a refreshment of mind and a new outlook on school problems. Thus the teacher of art might gain more by visiting foreign galleries than by attending courses of lectures on art.

### Summer Schools.

The institutions known as Summer Schools are admirably adapted to the needs of teachers, always provided that the students are not led to think that their attendance is futile unless they carry away a diploma of some kind. The purpose of such schools should be not to add paper qualifications, but to increase real efficiency. Hence teachers should choose such schools as promise intellectual stimulus and opportunity for discussion rather than those which offer only a short course of mechanical work. In "mechanical work" it is not intended to include only handwork. Indeed, rightly treated, a summer course in handwork may be the least mechanical of things, while, on the other hand, a course of literature, taken in a narrow and formal way for the sole purpose of obtaining a certificate, may be worse than a waste of time. At present the variety of schools offered during each summer tends to grow, and this is a healthy sign, since it means that there will be a wide choice available for teachers and more of their number will be led to give up a part of their summer vacation to the gaining of new ideas. It will be an excellent thing if we can establish the practice, so common in America, whereby teachers will voluntarily attend summer schools as part of their year's programme.

## FROEBEL SOCIETY AND JUNIOR SCHOOLS ASSOCIATION.

### A SUMMER SCHOOL

will be held during the first three weeks in August at Westfield College, University of London. One Course will consist of lectures, accounts of experiments, and discussions bearing on "Reality and Life in Education." Other Courses will be on Handwork—for guidance in preparation for the new Diploma of Handwork of the National Froebel Union—Nature Study, Gardening, Eurhythmics, Music, Sight Singing and Ear Training.

This year a few grants towards expenses will be given by the Council of the Froebel Society.

Further particulars may be obtained from the Secretary, 4 Bloomsbury Square, W.C.1.

## REVIEWS AND NOTICES.

## General.

*The Book-keeping Teachers' Manual.* By C. H. Kirton.  
(5s. net. Pitman.)

A good deal has been written on the subject of Book-keeping; in quality much of it poor, half of it very indifferent, and very little first-class. Mr. Kirton's manual makes a notable contribution to the subject. The opening chapters reveal the fact that not only is the author a master of his subject, but that he has got to grips with the real difficulties of the teacher. He places theory in its right relationship to the practical side, and shows us the ideal type of teacher. His types of lessons and class syllabuses are excellent. The matter throughout is presented in concise and definite form without any attempt to dogmatize, and the whole is so arranged that one becomes almost fascinated with the topic—especially in the chapter on the History of Book-keeping. The Manual concludes with the examination syllabuses and specimen papers of certain bodies which provide for the examination of students and professional men. It should take an important place among the textbooks of all really up-to-date teachers of commercial subjects. N.

*The Modern Office.* By James Stephenson.  
(4s. 6d. net. Methuen.)

"This treatise deals with those activities and processes (apart from book-keeping) which constitute the daily routine of a modern commercial office." So runs the first part of the preface. Mr. Stephenson has succeeded in making a dry subject remarkably interesting, and his facts are presented in a manner both clear and well arranged. Two features of the book—the test papers at the end of each chapter and modern office terms and abbreviations—should prove of real practical value to teacher and student alike. Correspondence is dealt with in a comprehensive fashion, the examples given being carefully chosen, but the equally important subject of Filing receives only casual attention. The illustrations are disappointing; the book would hardly be the worse for their absence. The almost obsolete copying press is shown, while the up-to-date Rotary style and types of mechanical Duplicator, &c.—so essential in a modern office—are omitted. One wonders, too, whether the author might not learn something from the modern office on the subject of handwriting! F. W. N.

"Men of Science Series." *Pioneers of Progress.* By S. Chapman. (2s. each. S.P.C.K.)

The popular style of this series may be judged from Mr. W. W. Bryant's observation, at the close of his interesting biography of Galileo:—"Galileo's sufferings must have hastened the triumph of Copernicanism. This triumph was inevitable in any case, just as practically all the things for which the Chartists rose in riot have since been peacefully enacted."

Of course, Mr. Bryant has to say that the oft-told anecdote of "Eppur si muove" is false. Dr. J. A. Crowther tells the life of Faraday, of which Tyndall said: "His work excites admiration, but contact with him warms and elevates the heart." Mr. L. T. Hogben writes the story of Alfred R. Wallace—"energetic man of science, courageous reformer, and a man of warm sincerity and tenderness." Each of the three booklets has a portrait of its subject. Intelligent young men and women will appreciate these biographies.

*Submarine and Anti-Submarine.* By Sir Henry Newbolt.  
(7s. 6d. net. Longmans.)

Books about the war may now be put into the past tense, and the annoying obscurities arising from the writer's regard for the censorship may now be cleared up. Neither of these things has been done in the case of this record, but we hope that Sir Henry Newbolt will get to work on a fresh edition without delay. His story is full of thrills and instinct with that zest for the sea which he so well knows how to impart. Two schoolboys who have read the book assure us that it is "topping," and after reading it for ourselves we heartily concur. The illustrations, which include an excellent frontispiece in colour, are drawn by Mr. Norman Wilkinson.

*Lay Religion.* By Henry T. Hodgkin. "Christian Revolution Series," I. (3s. 6d. net. Headley Bros.)

It would pass out of our scope to do more than indicate the general aim of this very earnest and genial re-statement of religious views by a member of the Society of Friends, who openly names himself Pacifist in the 1914-18 sense:—"The forces of labour, the moral drive of the woman's movement, the student body eagerly seeking for truth—all these and many more streams of aspiration and effort must flow into the river upon which we may yet be borne forth into the ocean and on to the City of God."

The "Carpenter of Nazareth" is taken as the central inspiration. But, on the psychological side, many will doubt Mr. Hodgkin's doctrine of the "individual moral choice" in the strong form he gives. "The choice cannot be exercised by another," he says, and he repeatedly emphasizes a freedom which is spiritually extreme.

### CIVIC AND MORAL EDUCATION LEAGUE. Summer School of Civics and Eugenics, CAMBRIDGE, August 2—August 16, 1919.

The AIM of the School will be to give TEACHERS and SOCIAL WORKERS and all interested in EDUCATIONAL and SOCIAL RECONSTRUCTION opportunities for studying and discussing the best ways of developing and maintaining CIVIC and RACIAL IDEALS in the Individual and in the Community. All interested in Civic and Eugenic Education and in Social Reconstruction are welcome as students.

All Meetings and Classes will be held at the UNIVERSITY ARTS SCHOOL, CAMBRIDGE, by kind permission of the Vice-Chancellor of the University.

The FEE for the full fortnight's course, including admission to all Lectures, Seminars, &c. (except to the Advanced Tutorial Classes), will be £2. 2s. Special arrangements for those who come for a shorter period, or who take the Advanced Classes, will be announced later.

Enquiries should be addressed to  
THE SUMMER SCHOOL SECRETARY,  
11 LINCOLNS INN FIELDS, LONDON, W.C. 2.

# Write Your Name Here

To Messrs. EVANS BROS., LTD., Montague House, Russell Square, London, W.C.1. *Please send me by post the Volumes marked with a cross (X) on approval for one week. I will forward remittance or return the books within a week. [Ed. Times, May, 1919.]*

(Mr., Mrs., Miss)..... Address.....

.....**The Teacher's World.** Mark a cross here..... and three specimen copies will be sent. "The Teacher's World" is the most up-to-date and popular illustrated weekly for Teachers. Contains practical articles for Teachers of infants and junior standards, by leading experts. Describes what leading authorities are thinking, saying, and doing. An inspiration and a practical help.

.....**1,000 Questions in General Knowledge.** Just Published. Based upon objects and experiences familiar to every boy and girl. The book is divided into 50 Papers and 20 questions, each set dealing with some special branch of general knowledge. The only book of its kind providing exactly what teachers need. Clear answers given to each question.

.....**The Book of the School Garden.** Contains all the help needed to make the School Garden a complete success. The whole subject is reduced to its simplest form, so that even the Teacher with little or no experience can work with the certainty of success. Clear and concise instructions are given, and many practical illustrations. 3s. 6d. net.

.....**Carpentry for Beginners.** Every teacher should have this new and unique book. It shows how teachers or pupils may make simple articles of household use. Clear instructions given, and a variety of practical designs with working drawings. Thousands of parents would gladly buy this book for their boys. Invaluable to teachers of carpentry. 5s. 6d. net.

.....**Shakespeare Plays, with Songs and Dances.** Specially arranged for School performance. Music by Martin Shaw. .... **The Pedlar.** The famous Autolycus episode from "A Winter's Tale." Contains six of the jolliest of Shakespeare's songs, and two dances set to happy English music. With staging directions, description of dresses, &c. 2s. 6d. net. .... **The Fools and the Fairies.** From a Midsummer Night's Dream. Includes eight songs and choruses, overtures, and three dances. With full instructions for dances, illustrations, and full music. 3s. 6d. net.

.....**Little Plays from Shakespeare.** Complete Shakespeare Plays, each skilfully adapted to be rendered as a short performance ..... (1) The Tempest ..... (2) Midsummer Night's Dream ..... (3) Merchant of Venice. 1s. each net.

.....**The Woodworker Magazine.** Contains practical articles, illustrated by working drawings, prepared by experts, dealing with the construction of plain and ornamental furniture. Deals with questions of light carpentry, joint making, tool manipulation, upholstery, repairing problems, and every-day difficulties. Published monthly, price 4d. Specimen copy free.

.....**The Music Student.** Mark a cross here ..... and three specimen copies will be sent. "The Music Student" appeals especially to those who desire to keep abreast of the best teaching methods of the day, and gives practical guidance in the choice of music for pupils. It is an inspiration to all who teach music and to all who love it.

.....**Youth and Music.** Place a cross here ..... and three specimen copies will be sent. "Youth and Music" presents music from the child's point of view, and helps to make each music lesson more enjoyable, and each practice hour more interesting and instructive. It gives an encouragement to the children and helps to make their work a credit to their teacher and themselves.

.....**Peasant Dances and Songs of Many Lands.** By Mrs. C. W. Kimmins, Founder of the Guild of Play. This choice book wins the hearts of young Musicians from the outset. The steps for various kinds of dances — gavottes, mazurkas, &c. — are first of all described by means of action pictures. These are followed by a series of exquisite little dances, for which simple Rhythmic Music is given, accompanied by actual photographic illustrations and directions for the dancing steps. Twenty-four varied and delightful dances are included, the music being selected with the co-operation of Sir Frederick Bridge. Suitable for lessons in Musical Appreciation, for School Concerts, Class use and Costume Entertainments. For children of all ages. Invaluable for promoting individuality, grace of movement and health of body. 7s. 6d. net.

## INVITATION

*Messrs Evans Brothers, Ltd., Educational Publishers, invite educationists, teachers, and all who are interested in the training of young people, to look through the books described on this page.*

*Kindly place a cross against the books desired, and they will be sent on approval for one week, without any obligation to purchase.*

.....**The Kingsway Book of Songs.** These songs render a dual service to Teachers of Class Singing. They provide material for many picturesque lessons in Musical appreciation. They also supply a delightful outlet for the children's love of song. Thirty Songs, by well-known Composers of children's Music, are given, including items by Martin Shaw, T. F. Dunhill, Dr. C. Hazlehurst, &c. Very suitable for class use and also school concerts. Several two-part songs with piano accompaniment given. 3s. net.

## LITERARY SECTION.

## BOOKS AND THE MAN.

**The Gloom of Youth.**

"Then what can you want to do now?" said the old lady, gaining courage.

"I wants to make your flesh creep," replied the boy.

—PICKWICK PAPERS.

It is of course well known that the town of Muggleton, in common with other erstwhile rural districts in Kent, has suffered many changes during the War. But I confess that I had not realized how great were the changes until I had occasion recently to visit the place. The farmstead of Dingley Dell has been used as the headquarters of a training camp. The pond has been drained whereon Mr. Winkle failed so lamentably as a skater. The name of Wardle is forgotten. But Muggleton remains; and it was in the village post-office and stationery store that I made a literary discovery, rivalling in its importance the immortal one which Mr. Pickwick himself made at Cobham in the shape of an inscription on stone.

My own find took the form of a battered and soiled manuscript, written in a boyish hand, with marginal drawings which were evidently meant to represent articles of food. Sausages, dumplings, a Christmas pudding, and a gigantic salmon were to be recognized, all apparently having been drawn in the intervals of literary toil. The manuscript itself bore no other signature than the word "Joe," and it is easy to imagine my surprise when I found that it contained a first-hand narrative of a boy's experiences at a boarding school in the early forties of the nineteenth century. The writer painted a doleful picture of the place, writing with a kind of artless skill that carried the reader along without fatiguing his powers of attention. A natural talent for arranging words was combined with a shrewd instinct for selecting incidents of a kind warranted to make the flesh of mothers creep, and every single hair of the scant paternal locks "to stand on end like quills upon the fretful porcupine."

The youthful author saw things through an unwashed eye, his vision being rendered the more imperfect by reason of a bilious derangement of the retina due to insufficient exercise. A marked aversion from sudatory physical exertion formed the basis of a criticism of games. The average schoolboy has his own primitive methods of dealing with physical indolence or water-shyness in a companion; and against these methods not even the claims of nascent genius, backed up by parental fondness, will serve as a protection. Our author had evidently been through the mill, and the experience had induced, as it sometimes will, a splenetic and morbid temper, which found its vent in condemning the institution from the heights of egotistic superiority.

The result was a picture which had a few elements of the truth, so placed as to produce an effect of distortion. School life is familiar to most of us, but few have experience of more than one or two schools. Hence the average father is unable to feel assured that certain things do not happen at all, merely because they were unknown in his own school. Upon the average mother a more positive effect is produced. Instead of shrugging her shoulders and observing that the school in question must be "a rotten sort of place," she believes the strabismic picture to be true and forthwith begins to exhibit tremors of maternal anxiety.

Pondering thus, I suddenly remembered the immortal aspiration of the fat boy in Pickwick, and the authorship of the manuscript was revealed in a flash. In his rare intervals of wakefulness Joe used to exhibit signs of a natural ability not to be despised. The internal evidence was perfect—the drawings of eatables marking the author's known pre-occupation with food, a characteristic which is even more manifest in a later book published under the author's full name. Above all, the impish desire to make our flesh creep, which is the chief note of the manuscript, as it was his sole confessed ambition.

It is a pity that Mr. Pickwick never saw this work. One can picture him standing in super-regal majesty and pronouncing to the author his tremendous verdict on Mr. Winkle—"You're a humbug, Sir."

SILAS BIRCH.

## REVIEWS AND NOTICES.

**Education.**

*The Great War brings it Home.* By John Hargrave. (10s. 6d. net. Constable.)

Since Principal Griffiths's contribution, in his Presidential Address to the Educational Section of the British Association, there has been no more significant treatment of the national value of the Boy Scout movement than is here provided. But the Principal's exposition is a mere flickering moonbeam compared with the full sunshine of this enthusiastic treatise. Mr. Hargrave is himself a well known Scout Master, rejoicing in his totem-name of "White Fox," which he flourishes on the title-page. To some the work may sound bombastic and unrestrained. We are unaccustomed in educational books to have this Carlylean vigour of style. Apostrophe seems out of place in works that deal with what is generally accepted as an essentially dull subject. But Thring set an example that may well be quoted as a justification for Mr. Hargrave's method of presentation. Besides, however enthusiastic and optimistic he may be, he is reasonable, eminently reasonable. If he cannot get what he wants, he is willing to take what he can get. If we object that under our present conditions few will be able to take up his camp training, he replies: "Never mind, let us at any rate have the few; and hope that by their example others will follow the lead." As for his enthusiasm, he glories in it, and goes further: he deliberately and elaborately defends fanaticism, and leads us to understand that against our hide-bound conventions nothing but fanaticism will avail.

The title is not a happy one, though it has its good points. The reader will be interested to know that what the War brings home is the need for an open-air life—a return to Nature. The noble savage is again set up for our admiration, and a rather better case is made out for him than is customary in diatribes of this kind. Rousseau would have revelled in these pages, and would have recognized the "White Fox" as a kindred spirit, but much more acquainted with the real article than the artificial condemner of artifice. Among my friends who have given themselves up to ethnology, and have gone to the ends of the earth to prosecute their studies, I find a strong, and not altogether unconscious, bias in favour of the savage, as compared with the civilized man. Of this bias Mr. Hargrave is well aware, and makes full use of it. As a dialectician, however, he is apt to take a short cut, and assume a support that is not always there. On page 32, for example, he tells us that, "In the foregoing pages we see that eminent thinkers of many different types are all in agreement." I fear that, if his opponents cared, they could raise quite as good an array on the other side. Further, he generalizes somewhat too easily in matters of psychology: as, for example, on page 335, where he says that "'Great Spirit' cannot thus be visualized."

The plain, practical, common-sense person may find a difficulty in speaking peaceably about this curiously unconventional book. He may not be able to realize that it is really dealing with even more rigid conventions than we are accustomed to in civilized life. There is a sort of wood-raft and camp pedantry as marked as that of the school and the drawing-room, and to be taken quite as seriously. On this point the White Fox leaves no room for doubt. "Half the failures that teachers and scout masters and boy specialists make are due to not taking things seriously." One is reminded of the St. Louis schoolmaster's statement: "A child is the most serious thing in Nature." The reader, bewildered by the paraphernalia of queer rhymes, stilted boy-speeches, garish garments, approved gypsy and tramp slang, is apt to feel that he is in a topsy-turvy world where nothing is real. The key to the position is that the White Fox knows his ground. He is dealing with matters from the boy's point of view; further, he knows when that view passes into the view of the man, and is content to allow the growing lad to pass naturally from one to the other. A great merit of the book is that its author takes wide views; he has developed, by the very nature of his studies, a general world philosophy, including a religion.

**JOHN HOGG,**  
**13 Paternoster Row, LONDON, E.C.4.**

"Be content with this world . . . Of this world we are certain. Here we are. Live. Be happy. Do not keep longing for what you have not. . . . Trouble not about the hereafter. You are sure to die and go on for ever." Religion resolves itself into what Mr. Hargrave calls "the great mystery."

It must not be supposed that the mind is neglected in the training suggested. What is wanted is "a happy combination of mental and physical training running side by side, and so interacting that it is impossible to separate the one from the other." When this is kept in view, and when it is remembered that the volume aims at covering the whole range of human life, it will be realized that it is an important contribution to educational reform. Mr. Hargrave here does for the "back to Nature" theory what Mme Montessori has done for her own theory in her recent book, in which she seeks to apply it to children of maturer age than her scheme at first contemplated. But Mr. Hargrave has gone further, and has covered the whole field. He must not be disappointed when he finds that the immediate practical results of his book are small. If he contrives, as we hope he will, to get his views taken seriously, he may be well content not to trouble about the educational hereafter. He has done his part, and done it well. J. A.

*Education and Social Movements.* By A. E. Dobbs. (10s. 6d. net. Longmans.)

Mr. Dobbs realizes that "it is much easier to draw logical inferences than to weigh the evidence of history," but, none the less, he goes very vigorously to work in drawing inferences; and we may say at once that we cheerfully acknowledge the skill with which he manipulates his historical material. We could wish sometimes that he were a little more given to summing up his results, for he leaves to his readers more than a fair share in the work of sifting out the generalizations he reaches. But, after all, our gratitude for the abundant material supplied reconciles us to the additional labour thrown upon us. We accept Mr. Dobbs's view that two of his chapters, though apparently more appropriate in a book on economics, are quite in place here, for the whole argument of the book justifies their inclusion. It is for the good of our souls—we who spend our time in studying educational problems—to have it brought home to us that our subject cannot stand alone, that it has its roots in religion, in politics, and in economics. Mr. Dobbs makes an excellent use of the medieval view that education is in some sort an alternative to labour, and uses this as one of the guiding threads through the labyrinth of educational development. Another of these threads is the conception of education as a means of social advancement, and we cannot but admire the skill with which our author follows it up to the outlet afforded by Ruskin College.

We wonder whether Mr. Dobbs is lacking in the power of artistic presentation when he deals with the social and economic conditions of the period (1700-1850) he treats, or whether he distrusts word painting and deliberately restricts himself to the more arid realm of baldly stated facts. In any case he gives an adequate supply of the relevant data, and is very generous in his footnotes. The armoury he provides will be found of the utmost service to all our educational controversialists, whichever side they adopt. For ourselves we are willing to accept Mr. Dobbs's thesis that, as the religious element was the main force in the earlier part of his period, economics is the dominant element in the later. But Mr. Dobbs does not lose sight of the social side, with its cultural elements, and we are glad to note that he calls in Adam Smith as a witness that even in these remote days labour did not lose sight of the more human sides of education. A great many of the questions that trouble our modern teachers find here a suggestion of their causes: for example, the present increase in the attendance at our schools. We welcome his explanation of how the school has come to occupy a larger place in education than formerly. Indeed, even the most *blasé* reader of educational treatises will find in Mr. Dobbs's pages something to give him a fillip and stimulate him to further inquiry. We look forward with interest to Mr. Dobbs's second volume.

*Progress of Education in India* (Vol. I). Edited by H. Sharp. (5s. 6d. Bureau of Education, India.)

This is the seventh quinquennial review, and covers the period from April 1, 1912, to March 31, 1917. The Indian educational authorities appear to be a little uneasy about publishing such a big book in War time. At any rate, they point out that it is not quite so big as usual, and they further argue that "in a country where little more than 3 per cent. of the population is undergoing instruction, the promise of responsible government as a goal, and a substantial instalment thereof as an early step, at once raises education into the position of a factor of more than ordinary importance." They are right in regarding education, therefore, as deserving very particular attention at the moment. They are, indeed, in the same position as Robert Lowe when, in view of the increased electorate, he set about educating our masters. But surely no apology is needed for presenting this handsome volume to the empire. We know all too little about India as it is, and we welcome all such means of increasing our acquaintance with the conditions under which our fellow subjects live. The volume follows its usual form, so that comparison with previous issues can be made with the minimum expenditure of time. The general style of the articles is refreshingly human for a Government production. A specially interesting feature is the large number of photographs of all kinds of educational institutions, supplied as a sort of appendix. A series of seventy-seven excellent pictures of various types of schools and colleges enables the reader to get a really satisfactory idea of the sort of institutions dealt with in the text.

*Welsh Education in Sunlight and Shadow.* By G. Perri Williams. (5s. net. Constable.)

This book contains 360 pages, and falls naturally into two parts—133 pages of text and the rest appendix. The disproportionate size of the appendix is to some extent condoned by the fact that it contains many blank pages. Why they occur at this time of paper stress may puzzle the reader. Probably some printing exigency accounts for the peculiarity. A more real justification of the ample appendix is that Mr. Williams lays great stress on the important influence exercised by examination papers in dominating the teaching, and is anxious to document the statements he makes in the text. He confines himself to secondary and University education, and finds much need for improvement in both. On the whole, he sees more shadow in the present situation than sunshine, but he is not without hope. His chapter on "What it might be" points the way towards the sunshine, and certainly the reader is left in no doubt about the way he ought to go if the light is to be attained. The book is a sort of more practical "What is and What might be," and if it lacks the charm of the earlier work it more than makes up by its directness and vigour. The author writes as a Welshman to Welshmen. He wants Wales for the Welsh, and in particular sees no reason why the Welsh University should be staffed by Englishmen, and grudges as lost to Wales the Welshmen who have attained to Chairs in the English Universities. In his own contribution to the discussion Mr. Williams shows himself to be master of the details of his subject, and he is very happy in the way he introduces actual instances in support of his general thesis. For example, it is very effective to be able to say that "there's only one Welsh graduate who took honours in Welsh and French in his degree." Altogether a spirited and interesting treatment of an important subject. J. A.

*A Text Book of Sex Education.* By Walter M. Gallichan. (6s. net. T. Werner Laurie.)

This work is meant for the use of parents and teachers. Its author is fully alive to the delicacy of his subject, as is proved by the formidable list of learned names that he submits as approving of the need for such teaching as he supplies. The book falls into four parts: the first dealing with General Considerations, the second with Scientific Teaching.

# TAKE YOUR PUPILS TO

Mr. Herbert G. Ponting's

FAMOUS KINEMA LECTURE

**"WITH CAPTAIN SCOTT  
IN THE ANTARCTIC"**

AND

**"ANIMAL LIFE AROUND  
THE SOUTH POLE"**

Some Press Opinions of Mr. Herbert G. Ponting's Famous Kinema Lecture:

From the *Daily Telegraph* :

**"For intrinsic interest no moving pictures ever produced since the invention of the kinematograph can compare with these.**

"The tragedy of the story is relieved by Mr. Ponting's entrancing studies of nature in the Southern seas and on the frozen continent. 'Killer' whales chasing seals, the seals themselves in all the intimacy of their domestic life, the gulls hatching and rearing their young, and, above all, the Adélie penguins, providing scene after scene of inimitable comedy.

**"No history of the expedition, however brilliantly written, could possibly enable us to realise what Polar exploration means as do these living pictures."**

From the *Evening News* :

"Mr. Herbert G. Ponting is telling at the Philharmonic Hall the story that can never die—the wonderful story of Captain Scott's South Polar Expedition, with new pictures. More than 100,000 British soldiers in France have acclaimed this great film of British adventure, endurance, sacrifice and heroism as **the greatest of all films.** Mr. Ponting's brilliant Lecture, which accompanies the pictures, is one of the most thrilling descriptions of real adventure ever told. He was the man who was there, the man who saw all that he shows and tells about, and who kinematographed the whole of the film."

From *Country Life* :

**"It is a great thing for England that Mr. Ponting should deliver this lecture and show these pictures. Never before has it befallen that an Englishman had such a story to relate.**

"Mr. Ponting had himself been with the Scott Expedition, and had taken these wonderful moving-pictures which enthralled his audience. As he told their story, he was in the position of a minstrel of old reciting to his harp the great deeds of his Chieftain who could never himself return to tell the tale.

**"There is no need for us to recount here the story which is written in every British heart, but it is well to remember that to the young it will be always fresh. That is one reason why we should like all schools to have an opportunity of seeing these extraordinary films.**

"A still greater reason is that the story of Captain Scott cannot be too closely or too widely known among the young people of this generation. It tells of heroism without swords. The boy who gets a good grasp of the extraordinarily hard conditions which the explorers had to face, and then hears how they were confronted with restless energy and unwavering courage, has got into his head **such a lesson as no schoolmaster could teach or minister preach."**

From the *Daily Mirror* :

**"To see Mr. Ponting's historic film, and hear his brilliant lecture, is to realise what being an Englishman should mean. Some people talk of a subsidised theatre. This should be a subsidised film. Nay, more than that, people should be made to see it."**

Hang this page up in the classroom for your pupils to read

the third with Educational Factors, and the fourth with such matters as The Menace of Ignorance, Women's Part in Sex Education, and the Views of Modern Teachers. The book is eminently practical: the subject is treated with scientific precision, the style is good. Altogether the matter is handled in as delicate a way as is possible. Unwilling as most of us are to deal with this subject at all, we all have an uncomfortable feeling that we are cowardly in avoiding it. Accordingly, a book like this should not be passed by merely because we dislike the subject. Those of us who have any responsibility for the morals of young people must take some notice of the important issues raised in sex relations, and nowhere could the subject be better studied than in Mr. Gallichan's pages. Naturally the Educational Section will be of most interest to readers of this journal. There they will find not only a sensible treatment, but a very valuable bibliography.

*Handicrafts and Reconstruction.* Notes by Members of the Arts and Crafts Exhibition Society. (2s. 6d. net. John Hogg.)

The quality of this valuable book is revealed in part by the page of contents. We have an introductory chapter by Mr. W. R. Lethaby, who pleads for a return to the handicraft tradition, pointing out that the very life of the State may be bound up with the survival of the crafts and the types of inventiveness and initiative they produce. This chapter is followed by others on: The Crafts in Education and Reconstruction, by H. Wilson; The Traditional Country Crafts, by A. H. Powell; Basket Making, by Thomas Okey; Weaving and Textile Crafts, by May Morris; Local Building Crafts, by Thackeray Turner; College Building, by R. W. S. Weir; Agriculture and Craft, by Christopher Turner; Education for Industry, by W. R. Lethaby; Craft Workshops in Towns, by Laurence A. Turner; Small Associations for Sale and Production, by Christopher Whall; Local Societies of Arts and Crafts, by J. Paul Cooper; The Aims of the Arts and Crafts Exhibition Society, by W. A. S. Benson. All these writers are acknowledged authorities, and they have produced a book which is full of enthusiasm and valuable suggestions. Broadly, the claim they make is that art should function in our lives. "The time has come when Art Schools should be expected to produce for service." This is sound doctrine, and may well be taken for a text by municipal and education authorities. The book itself should be bought and read by everybody who cares for the public welfare or who is weary of the somewhat pretentious and unreal claims of the kind of art work and art teaching which believes that beauty is only skin deep. R.

- (9) *Russian Accentuation.* By E. G. Underwood. (Blackie. 3s. 6d. net.)
- (10) *A Russian Notebook.* By E. G. Underwood. (Blackie. 3s. 6d. net.)

We shall never develop anything like a standardized and permanent system of language teaching out of our present experimental stage till we have clear ideas on the actual matter to be taught, as distinct from the process of teaching it. What is knowing a language? What, to begin with, is the position of the native in regard to his own spoken language? He possesses—(1) A very large number of the most frequently used sentences, phrases, and terms "on the tip of his tongue." (2) The power to form new sentences and phrases, on the analogy of those he has on the tip of his tongue. For example, a child that has heard all its life the sentences, "Mother's gone to church,"

"Father's gone to the club," repeats these sentences, as required, without the need of a moment's reflection. At a later date, when mother has the vote and father has flown to the consolations of religion, the child easily forms, by analogy, the new sentences, "Mother's gone to the club," "Father's gone to church." (3) The power to understand any sentence, however rapidly spoken.

These are the three essentials as far as matter is concerned. We venture to indicate some inevitable inferences in regard to the essentials of method. (1) The first stage must consist of learning the most frequently used sentences by heart, however much this process may be disguised (as it wisely is disguised) by the direct method of question and answer, and of acting, recitation, and singing. The pupil must learn to speak these sentences at the correct speed, for it will, it is hoped, soon come to be generally realized that a sentence spoken with less than a native's rapidity is a sentence mispronounced, speed being just as much a factor in pronunciation as, for example, stress or intonation. (2) The grammar will consist entirely of such explanations and paradigms as will enable the pupil to understand the structure of the "tip-of-the-tongue" sentences, with a view to applying the analogies correctly when forming new sentences. Matter will never be subordinated to grammar, as by postponing useful sentences on account of their grammatical irregularities, or by introducing useless sentences to illustrate grammatical points. (3) The pupil will be accustomed, as far as possible, to understand sentences spoken at correct speed. The teacher will put all questions and deliver all dictation at top speed, choosing, of course, familiar language, preferring to repeat a sentence till it is understood, rather than lower the rapidity of utterance. (4) With a view to saving the pupil from forgetting what he has learned (chiefly from forgetting words), and introducing him gradually to the literature, there will be "rapid readers," with vocabularies and translations; or, failing translations, with notes to help the pupil over the hard passages. (5) With a view to anticipating the mistakes which arise by faulty transference of the native idiom to the foreign language, there will be, at a very late stage, a limited amount of *idiomatic* translation from the native into the foreign language.

How do the books before us stand the test? *Schritt für Schritt* is an admirable little Direct Method book with a carefully chosen vocabulary. But the tendency to be guided by a happy instinct, rather than by the rigorous application of an exactly defined principle, appears in the very first pages, in such conversationally useless phrases as: "Da kommt auch noch ein Wolf," "Ein kleiner Knabe (a literary word, by the way; should be *Junge*) Schmeckt gut," "Wenn du mich fusst."

The Russian books we cannot entirely commend. Mr. Underwood's *Russian Notebook* is an example of over-emphasizing of a detail of method—the fad about grammar by induction. One wonders whether such a book is ever filled in. Certainly not inductively, on each pupil's initiative. No master would risk a 3s. 6d. book in that way. Seventy pages on "Russian Accentuation" are enough to appal the stoutest heart. We advise every pupil to follow the counsel, given by the author himself (pages 4 and 6), to note the accentuation of each word as one meets it in one's reader, till the correct accent is used spontaneously. One could learn by heart many hundreds of sentences from accented Russian readers in the time it would take to master all these horrifying rules and exceptions.

Mr. Underwood voices a common error in the preface to his *Russian Vocabulary*, when he suggests that Russian vocabulary is difficult in any unique degree. And in any case the committing to memory of lists of words with English equivalents is quite the worst way to acquire it. The haphazard character of our present experimental stage appears in the curious omission of the numerals and the days of the week, two of the few really useful lists, because they can be learned by repetition without the intrusion of English equivalents.

Mr. Forbes, with the long lists of isolated sentences in his First and Second Russian Books had already set us wondering whether the novelty of his method was the result of an original consideration of first principles, or merely of an instinctive craving to be "up to date." We are forced to the latter verdict. We have allowed translation from the native into the foreign

(Continued on page 144.)

**THE PUBLISHER, Printing House Square, London, E.C. 4.**

language its proper place. But when it comes to 3,500 lines of it! . . . And besides, Mr. Forbes defeats the very aim of such translation, by deliberately "framing" very many of "the English sentences according to the rules of Russian syntax." It is a pity, for Mr. Forbes has a great sense of humour. "Our housemaid is a Scotswoman; her *fiancé* is a policeman; they will be very happy" is one among many gems.

Of the literary readers, *Selection of Russian Poetry* deserves a review to itself. It is quite charming in every way. When one reads a piece of the delightful translation, one is amazed to find, on comparison, how literal it is.

*Tartarin sur les Alpes* and *Prise de la Bastille* are pleasant books, and the notes confine themselves to their proper function of being helpful.

As for *Andromaque*, we have often wondered what useful purpose, linguistic or literary, can be served by such notes as "Voilà ses yeux, sa bouche, et déjà son audace." Cf. "Sic oculos, sic ille manus, sic ora ferebat" (Enéide III). What a lucky thing boys never look up references! They wouldn't get far if they did. Another kind of comment in which Mr. Groves indulges is illustrated by the following:—"Vous ne donnez qu'un jour, qu'une heure, qu'un moment." Gradation descendant! 'Hector tomba sous lui (Achille). Troie expira sous vous' (Pyrrhus). Il aurait mieux valu écrire, 'Troie tomba sous vous et Hector expira sous lui' (Subigny)."

All the principles that apply to the teaching of the spoken language apply equally well to the written. What is essential is to realize that the spoken and the written are two distinct, though very similar, languages, and that, if we do not preserve this distinction, our pupils will no more learn to use either correctly than if they began at one and the same time to learn, for example, Irish and Scottish Gaelic. This consideration makes it quite unintelligible how one with a reputation like M. Paul Passy's can first remark in his preface, "Ce qu'on désire surtout, c'est une connaissance *pratique* de la langue: arriver à la comprendre facilement et à la parler couramment," and then proceed to serve out such conversationally useless material as this: "Car les femmes n'ont point de caste ni de race . . . leur finesse native, leur instinct d'élégance, leur souplesse d'esprit, sont leur seul hiérarchie."

Meanwhile, with all these points to discuss, our *Modern Language Teaching* is still occupied with such questions as whether a vowel were not better called a "syllabic," and our *Modern Language Review* devotes itself with real zest to Middle English and Old French, to etymology and the "sources" (word as blest as "Mesopotamia") of Anatole France, to the dispute about the iambic or the trochaic basis for English prosody, to Dante and Walther von der Vogelweide.

"Oxford Russian Plain Texts."—*Select Poems of Lermontov*. (1s. 3d. net.)

Fortunately the text is not so plain as the title would lead one to suppose, for the accent is marked throughout, and a text with accents is, for one who understands the first principles of Russian pronunciation, very nearly the same thing in effect as a phonetic text. There are only a few words whose pronunciation cannot be known at sight with the aid of the accent-mark.

*Italian Grammar Self Taught*. By A. C. Panagulli. (3s. net, cloth; 1s. 9d., paper. Key to above, 9d. net. Marlborough.)

These books are intended to aid the private student. A concise and simple arrangement of the rules, accompanied by well chosen examples and extracts from Italian authors, is further supplemented by a list of idioms and a useful vocabulary. In the second edition, some recapitulatory tests are added, with passages for reading practice. An excellent example of this well known series of language manuals.

O. C.

## English.

*Essays on Goldsmith by Scott, Macaulay, and Thackeray, with Selections from his Works*. By G. E. Hadow and C. B. Wheeler. (2s. 6d. Clarendon Press.)

A useful compendium, containing good selections from Goldsmith's prose and poetry, with copious notes.

"English Classical Authors."—(1) *Spenser's Faery Queene* (Book V). Edited, with Introduction and Notes, by Alfred B. Gough. (3s. net.) (2) *Carlyle: Past and Present*. Edited, with Introduction and Notes, by A. M. D. Hughes. (3s. 6d. net.) (Clarendon Press.)

These are scholarly editions, and, with their lengthy introductions and copious notes, will be welcomed by all students of literature.

"Annotated English Texts."—(1) *Macaulay's Essay on William Pitt the Younger*. Edited by W. K. Leask. (1s. 6d. net.) (2) *Childe Harold's Pilgrimage*. Edited by David Frew. (2s. net.) (3) *Macaulay's Life of Johnson*. Edited by John Downie. (1s. 6d. net.) (4) *Spenser's Faery Queene* (Book II). Edited by W. K. Leask. (2s. net.) (5) *Scott's Lord of the Isles*. Edited by W. K. Leask. (1s. 6d. net.) (6) Tennyson: *The Coming of Arthur and The Passing of Arthur*. Edited by David Frew. (9d. net.) (Blackie.)

Useful editions without any special features, containing the usual introductions and notes.

*The New Chivalry and other Poems*. By the Rev. E. E. Bradford, D.D. (Kegan Paul.)

Dr. Bradford we know as a writer of melodious verse. The present volume contains many elegant and musical numbers. Yet the subject-matter of many of the poems is unusual. "Boy love," as Dr. Bradford would interpret it, may have "more in it of Christ than Socrates," but to find a succession of poems to "Hilary," "Frederick," "Frank," "Will," and others is not common in English verse. We imagine the boys themselves, if they exist, looking rather red and sheepish. We think on the whole we prefer the ardent robust lustiness of the seventeenth century lyrics.

"Pitt Press Series."—Milton: *Arcopagitica*. With a Commentary by Sir Richard Jebb. (Cambridge University Press.)

The inclusion of Jebb's Commentary makes this edition of notable value to students of literature.

*My Country*. A Textbook in Civics and Patriotism for Young Americans. By Grace Turkington. (Ginn.)

A book in which the big drum of Liberty is thumped with most resounding blows. With its numerous headlines on every page and the constant reiteration of the "greatness" of the country, it may perhaps achieve its purpose with young Americans. It may be possible to teach patriotism in this way, but Englishmen will prefer less noisy methods.

"Practical Hints for Junior Teachers."—(1) *Reading a Recitation*. (2) *The Geography Lesson*. (6d. net each. E. Arnold.)

Books on School Method of late years have tended to become so diffuse and general, and so pretentious in many cases, that it is refreshing to read these little booklets, with their sound, simple, and direct advice to young teachers. "The Geography Lesson" is especially good. We shall look for an extension of the series, and hope that succeeding authors will not in modesty remain anonymous. Teachers old and young may read these with profit.

"English Literature for Secondary Schools."—(1) *David Copperfield* (abridged). Edited by H. A. Treble. (1s. 3d. net.) (2) *Hindu Tales from the Sanskrit*. By S. M. Mitra. (1s. 6d. net.) (Macmillan.)

These maintain the standard of a useful series. Each contains notes and exercises, and is sufficient for one term's work.

F. F. P.

We welcome the first issue of a new publication bearing the title *English*. It is designed to promote the right use of our mother tongue by "readers and writers, Government officials, teachers and preachers, authors, journalists, business men, public speakers, private students, and all lovers of the English language at home and abroad." If all the beneficiaries respond as they should, the success of the new journal is assured. It is published by P. Macnamara, Barham House, Handel Street, London, W.C.1, and the price per month is sixpence net.

(Continued on page 146.)

## HARRAP'S LATEST PUBLICATIONS.

### EDUCATING BY STORY-TELLING.

[Just Ready] Showing the Value of Story-telling as an Educational Tool for the Use of all Workers with Children. By KATHERINE DUNLAP CATHER. Size 8½ by 5½ inches. 448 pages. 7s. 6d. net.  
An important feature of this most valuable book is the Bibliographies. Every section has its list of helpful sources; and there is an extensive list of the best books containing suitable material for the story-teller. Most helpful of all is a unique bibliography of stories for eight years of a child's life, carefully graded and arranged under suitable months of each year.

### AN IMPORTANT NEW BOOK.

### THE HISTORY OF ARYAN RACE IN INDIA.

From the Earliest Times to the Death of Akbar. By E. B. HAYELL. With Photogravure Frontispiece. 32 Full-page Plates and Maps, &c., and Full Index. 620 pages. Gilt top, 15s. net. Also in Half Morocco, 30s. net.

"An informing and illuminating work for which Students and Politicians should be profoundly grateful. Many illustrations of Indian Art and Architecture add to its value and interest."—*Yorkshire Post*.

### AN INTRODUCTION TO THE HISTORY OF SCIENCE.

By Dr. WALTER LIBBY, M.A. With Eight Illustrations. Size 7½ by 5 in. 304 pages, 5s. net.

"Efficiently written, and free from excessive detail."—*Saturday Review*.

### HARRAP'S INTRODUCTORY ALGEBRA.

By WILLIAM FARQUHARSON, M.A., Daniel Stewart's College, Edinburgh. Crown 8vo, 180 pages, with Answers, 2s. net. Also without Answers, 1s. 9d. net.

From the Principal of a Preparatory School:—"Farquharson's Algebra is first-rate, and I shall put an order through in due course. I hope the book will have the success it deserves, for of the large number of elementary Algebras I have perused in my search for something suitable for beginners, this is the only one that appears to have realized and provided for the extraordinary difficulty of the subject for small boys."

### ENGLISH EXTRACTS AND EXERCISES.

For Comparative Study and Training in Composition. By F. H. PRITCHARD, Lecturer in Literature at the Municipal Technical School, Devonport. Large Crown 8vo, 256 pages, 2s. 6d. net.

An admirable practice-book in English for lower and middle forms in secondary schools, and for upper classes in primary schools. The main idea is to centre all the week's work in English round a suitable extract. The exercises are abundant, and in many cases novel in character. No essential point in elementary English is left untouched, and wherever possible opportunity is taken to stimulate interest in the author or extract under consideration.

### A FIRST SPANISH COURSE.

By Profs. E. C. HILLS and J. D. M. FORD. With exercises and vocabularies. Crown 8vo, 340 pages, 4s. 6d. net. Key, for Teachers only, 5s. 3d. net.

This easier course is designed for much younger pupils than the Author's previous work.

"A prominent feature is the RESUMEN GRAMATICAL in Spanish at the end of each lesson."—*The Journal of Education*.

### LIBRO DE LECTURA PARA PRINCIPIANTES.

Edited by E. MAUBER, Reading School. With Vocabulary and Exercises. Small Crown 8vo, limp, 160 pages, 2s. net.

### A SCHOOL GRAMMAR OF PRESENT-DAY FRENCH.

By J. E. MANSION. Crown 8vo, 256 pages, 3s. 6d. net. [Just ready]

A new reference French grammar for middle and senior forms, special features of which are the stress laid on fundamental principles, and careful differentiation between the normal constructions of the language and those which belong to emotional, colloquial, or literary expression.

## HARRAP'S BILINGUAL SERIES

General Editor—J. E. MANSION.

Each Book price 1s. 6d. net.

Modern Language Readers for the student who wishes to enlarge his vocabulary through reading. Each book consists of a carefully selected story, or other suitable material, with text and translation on opposite pages and a few Notes. The Series will include books in all the principal languages.

### FIRST ANNOUNCEMENT.

- FRENCH.** A. Daudet: *Lettres de mon Moulin* (Selected). (Ready)  
E. About: *Les Jumeaux de l'Hôtel Cornaille*. (Ready)  
W. W. Jacobs: *Selected Stories*. (In the Press)

The volumes are of handy size for the pocket—6½×4 ins. Each contains 128 pages, bound in stiff paper cover. Price 1s. 6d. net.

London: GEORGE G. HARRAP & CO. LTD.

Directors: GEORGE G. HARRAP, G. OLIVER ANDERSON.

2 & 3 Portsmouth St. Kingsway London W.C.2.

## UNIVERSITY OF LONDON MATRICULATION EXAMINATION.

### ENGLISH PAPERS

September 1915—June 1918  
Bound up together. 1s. 6d. net. Postage, 2d.

### ARITHMETIC AND ALGEBRA (with Answers).

### GEOMETRY AND MECHANICS

ALONG WITH

### MATHEMATICS MORE ADVANCED

(with Answers).

September 1915—June 1918.

Bound up together. 2s. net. Postage, 8d. extra.

### THE STUDENT'S GUIDE

Making the Most of One's Mind.

By JOHN ADAMS, M.A., B.Sc., LL.D.  
(Professor of Education in University of London).

*The Times Educational Supplement*.—"Dr. Adams has written an admirable book, and a student may be regarded as fortunate who avails himself of its wisdom."

*The Teacher's World*.—"Prof. Adams combines in a rare and refreshing manner the wisdom of a philosopher with the acumen and practical skill of a man of affairs."

Fifth Impression. 4s. 6d. net. Postage, 5d.

### EVERYMAN'S CHEMISTRY

The Chemist's point of view and his recent work told for the Layman

By ELLWOOD ENDRICK.

*The Times*, in a two column review.—"We commend the volume heartily to a wide circle of readers."

*Dr. J. L. PATON, of Manchester*.—"I think the book ought to be distinctly useful in the attempt to familiarize our young boys, especially classical boys with some of the staple processes of the application of chemistry to production and the methods of scientific discovery. It is quite a live book."

With Illus. 8s. 6d. net. Postage, 6d. extra.

### A SCHOOL CHEMISTRY

By W. H. RADCLIFFE, B.Sc., F.C.S.,  
(Chemistry Master of Tenison Schools).

Part I. 3s. Part II. 1s. 6d.

### A SHORT HISTORY OF MODERN EUROPE

From the French Revolution to the Great War.

By EUGENE L. HASLUCK, B.A.

With many specially prepared maps. 3s.

### A SHORT HISTORY OF MODERN ENGLAND

By FREDERICK BRADSHAW, M.A., D.Sc.

With maps. 3s.

### MATRICULATION ENGLISH COURSE

By B. J. SPARKS, B.A., B.Sc.

Senior English Master at Portsmouth Secondary Schools.

Cloth, 3s.

### A Fascinating Study of World History.

### GEOGRAPHY AND WORLD POWER

By JAMES FAIRGRIEVE, M.A., F.R.G.S.  
of the London Day Training College.

With 80 Illus. New Impression. 4s. net. Postage, 5d.

### NEW REGIONAL GEOGRAPHIES

By LEONARD BROOKS, M.A., F.R.G.S. Edited by JAMES FAIRGRIEVE.

Vol. I: AMERICA.

Vol. II: ASIA AND AUSTRALASIA.

Ready. 3s. 6d. each, with large number of original illustrations.

Vol. III: EUROPE AND AFRICA.

Will be issued as soon as the new boundaries are settled.

### THE BRITISH ISLES

With new Illus. Now ready. 2s. 6d.

Other Vols. in active preparation.

### ECONOMIC GEOGRAPHY of the BRITISH EMPIRE

By C. B. THURSTON, B.Sc.

Geography Master at Kilburn Grammar School.

With specially prepared maps and tables.

UNIVERSITY OF LONDON PRESS,  
18 Warwick Square, London, E.C.4.

"Class Books."—*Oral and Written Exercises in English Composition*. By R. S. Wood. (Primary Book, 6d.; Junior, 7d.; Intermediate, 8d.; Senior, 9d. Macmillan.) Contains copious exercises on traditional lines.

*English Grammar*. By J. S. Norman. (1s. 6d. net. Yearbook Press.)

A suitable little compendium for those who intend to take a language course.

*The Pupil's Classbook of English Composition* (Book I). By E. J. S. Lay. (1s. 6d.)

The author is a prolific writer of classbooks, and seems in danger of degenerating into what a former Chief Inspector of Schools called a "universal expert." Apparently his books are intended to dispose entirely of any necessity for a class teacher. This book professes to instruct the child how to write "nice stories and beautiful letters." A few poems masquerade as "Pleasant Thoughts Worth Remembering," while there is much gushing verbiage about "jolly games," "If-I-were" stories, "when suddenly" stories, and a "Little Dictionary" is appended. The author's stated aim is to accustom the pupils habitually "to do more for themselves," but we think ourselves that a teacher's personal directions are of infinitely more value than the pseudo-simplicity of the directions in books of this type.

"The Kingsway Series."—(1) *The Kingsway Book of Famous Explorers*. By R. J. Finch, F.R.G.S. (2) *The Kingsway Book of Geography Stories*. By R. J. Finch, F.R.G.S. (3) *Tests of Progress: English*. (Pupil's Book, 1s. net; Teacher's Book, 2s. net.) (4) *Tests of Progress: Arithmetic*. (Pupil's Book, 1s. net; Teacher's Book, 2s. net.) (5) *Little Plays from Shakespeare*. Short acting versions for young people. (a) "The Tempest." (1s. net.) (b) "Midsummer Night's Dream." (1s. net.) (Evans Bros.)

Messrs. Evans Bros. are making an enterprising attempt to capture the market in the matter of books for class teachers. The batch before us is of uneven merit. The geography books are concisely written and the matter well selected, but the compiler's advice to teacher to turn themselves into mechanical gramophonic retailers of the subject-matter is to be deplored. We would prefer to see the same matter in School Readers. Such books as these encourage the lazy class teacher and stultify all effort on the part of the conscientious teacher.

The "Tests of Progress" are suitable for older scholars. The English tests are traditional, and the arithmetic tests are up to date and even ultra-modern. They savour more of "smartness" than real scholarship, but are rightly not confined to arithmetic in its narrower conception.

The "Little Plays" are somewhat daring truncations of Shakespeare. We are dubious of the value of Shakespeare to children of the age for whom these are apparently intended, and we are old-fashioned enough to prefer "Lamb's Tales" to any of these abridgments. F. F. P.

*The Story of Dr. Johnson*. Being an Introduction to Boswell's "Life." By S. C. Roberts. Illustrated. (4s. 6d. net. Cambridge University Press.)

Mr. Roberts has done his work well. He need not fear the critics: this is no mere Boswell abridged, but is complete in itself. Intended primarily for younger readers, it will appeal to all literary students. It is well written, and in its pages Johnson the boy, the man, the critic, the friend, and the traveller lives again. Beautifully produced, with many full-page illustrations and portraits, we know of no better introduction to this dominant character of a brilliant period.

"The Poetry and Life Series."—*Johnson and Goldsmith and their Poetry*. By W. H. Hudson. (1s. 6d. net. Harrap.)

A good addition to this well known series. The book naturally contains more of Goldsmith than of Johnson, who is not always remembered as a poet. Each author is dealt with biographically and critically according to the plan of the "Poetry and Life" series, which is to emphasize the relation of personality to production.

## Mathematics.

*Mnemonic Notation for Engineering Formulae*. Report of the Science Committee of the Concrete Institute. With Explanatory Notes by E. Fiander Etchells. (6s. 3d. net, post free. London: E. & F. N. Spon. New York: Spon & Chamberlain.)

As long ago as 1907 Mr. E. Fiander Etchells, Assoc. M. Inst. C.E., &c., formulated the main principles of the standard system of notation which is advocated in the pages of the present volume. His pioneer work met with the approval, and also with the active support, of the Science Standing Committee of the Concrete Institute, several of whose members assisted in the development of the primary conception. On Mr. Etchells naturally has devolved the responsibility of putting into a form suitable for publication the results of his own and the Committee's labours, and the able explanatory notes which form an integral part of the text, and which elucidate the principles of the system, are due to his pen. Apart from these notes, the text consists largely of compact and carefully considered tables illustrative of the symbols proposed as suitable. The idea which underlies the projected scheme of notation is that of creating a standard symbolic system from which arbitrary elements shall be absent, and in which, therefore, every symbol shall have a real significance and a real connexion with that which it represents. Theoretically speaking, the idea is excellent, and it is to be hoped that in practice certain inevitable objections which present themselves may eventually be in some considerable degree overcome. Of these there may perhaps be mentioned two in particular: (1) the risk of the system becoming too elaborate, and of its necessitating as a consequence too much detailed and special study on the part of those who use it; (2) that which arises from the fact that, even when every available advantage has been taken of the various existing alphabets and of variety of type, there is certain to remain a deficiency in the number of distinct symbols at the disposal of an author; whence it follows that it will still become ultimately impossible to carry out fully the desired object.

The underlying principles of the system have, of course, been long recognized as natural and helpful. We have but to turn over the pages of any standard textbook or any branch of mathematics to meet with manifold instances. For example, in a work on mensuration,  $l, b, d, h, \dots$  are the accepted symbols employed in connexion with length, breadth, depth, height,  $\dots$ . In mechanics  $V, v, a, g, W, w, \dots$  are used when dealing with velocities, acceleration, gravity, weight,  $\dots$ . And similar testimony is afforded by other branches of mathematics. Moreover, the ideas of "greaterness" and "lesserness" which play an important part in the new scheme, find a place in the selection of such symbols as  $R, r$ , to denote respectively the radii of the circum- and in-circles of a triangle. The special debt owed to Mr. Etchells and his colleagues by engineers—for whose benefit the present work was primarily undertaken—and by mathematicians generally, consists in this: namely, that the promoters of the general standard notation have gathered up the already existing threads and have woven them together with a multitude of others of kindred sorts into a fabric. The process adopted in order to arrive at any special symbol is as follows: the word denoting the quantity or magnitude under consideration is cut down gradually until there remains only its initial letter—its acrologic symbol—and this becomes its sign.

It may reasonably be inferred that by the retention of intermediate forms, syllabic in character, the devisers have sought to provide a reserve of symbols which will be needed in the cases—and their name will be legion—where identity of acrologic forms would cause ambiguity. Among the symbols chosen, the inverted minute does not look happy, although the purpose it serves is good from the point of view of economy. On the other hand, the use of  $\theta$  and  $\psi$ , to denote inclination to the horizontal and vertical planes respectively, is very neat. The writer desires to draw the attention of any who think of purchasing the volume to the possibility of obtaining it by applying to the Secretary of the Concrete Institute, Denison House, Vauxhall Bridge Road, S.W.1.

C. M.

(Continued on page 148.)

# GEORGE PHILIP & SON, L<sup>TD</sup>

## PHILIPS' COMPARATIVE WALL ATLASES

**Europe, British Isles, Asia, Africa, N. America, S. America, Australia, and World Relations.** Under the joint editorship of J. F. UNSTRAD, M.A., D.Sc., and E. G. R. TAYLOR, B.Sc. Arranged for **Comparison** to show by means of Eight Maps the chief facts of Geographical Phenomena. Singly, **2s. 6d.** net each, also mounted on cloth and eyeletted, **6s.** net each; complete from **32s. 6d.** net. Coloured Miniature Wall Atlas Europe free.

## ESSENTIALS OF WORLD GEOGRAPHY

By J. F. UNSTRAD, M.A., D.Sc., and E. G. R. TAYLOR, B.Sc. A broad view of the chief features of the earth and its inhabitants. The most important matters, both of physical and human geography, are dealt with in a simple manner.

Crown 8vo, 256 pages, with abundant diagrams and maps, **3s.**

## GENERAL AND REGIONAL GEOGRAPHY

A new Textbook of Modern Scientific Geography for Teachers and Students. By J. F. UNSTRAD, M.A., D.Sc., and E. G. R. TAYLOR, B.Sc. With 140 Maps and Diagrams specially drawn. 520 pages, large 8vo, **7s. 6d.** net.

## SYNTHETIC MAPS

Eight sets. **The World, Six Continents, British Isles.** By E. G. R. TAYLOR, B.Sc. For the study of geographical relationships by the imposition of various transparent maps upon coloured foundation maps. Each Set consists of two Coloured Foundation Maps and eight Transparencies, together with Suggestions for Class Use. In stout Manilla case, 11 by 9 inches. **9d.** net per set. Also separately, printed on cartridge paper for use as hand maps, **3d.** net each.

## CONTOUR EXERCISE BOOK

By ERNEST YOUNG, B.Sc., and JAMES FAIRGRIEVE, M.A. A drawing book in which the pupil can actually work out geographical problems. Gives in a few pages a graded course of contour map drawing, with Diagrams of Contours. With lines ruled for drawing sections. Size, 11 by 7 inches. **6d.** net.

## NEW SCHOOL ATLAS OF MODERN HISTORY

By RAMSAY MUIR, M.A., Professor of Modern History in the University of Liverpool. **Over 121 Maps and Diagrams.** Emphasis is throughout placed on the *physical basis* of historical geography.

Demy 4to (11 by 9 inches), cloth, **4s. 6d.** net.

## HISTORICAL ATLAS FOR STUDENTS

By same Author. Cloth, **12s.** net; quarter leather, **16s.** net.

## "PIERS PLOWMAN" HISTORIES

Presenting history in different ways to suit the different stages of the mind's development: to the youngest as simple stories; to those a little older as picturesque descriptions of social conditions; to the elder ones as the development of national life and government.

Seven Junior Books from **1s.** Four Senior Books (for Teachers and Students) from **6s.** net.

We shall be happy to submit any of the above for inspection if desired. Lists of Wall Maps, Geographical Apparatus, and Textbooks on application to

**32 Fleet Street, London, E.C. 4.**

# IN THESE DAYS, TIME IS PRECIOUS! DON'T WASTE IT

in trying to teach your children second rate, uninteresting songs!

It isn't worth the trouble, when you have the BEST at your service in CHILD SONGS.

This is the opinion of Hundreds of Teachers.

**100,000** copies of the Music Editions have already been sold, and in addition we have issued over **100,000** Books of the Words. **THESE FIGURES SPEAK!**

# CHILD SONGS

Edited and in part composed by CAREY BONNER.

With Foreword by GEO. HAMILTON ARCHIBALD.

**VOL. I.—For the PRIMARY Departments of the Sunday School and Day School and for Home Singing.**

Contains 200 Songs and Music, including Birthday Songs, The Cradle Roll, Sunshine Songs, Story Songs, Marching Songs, Hush Music, &c., &c., with Alphabetical and Classified Indexes, Order of Exercises and Hints on the Teaching of the Pieces.

**VOL. II.—For Primary and JUNIOR Departments and for Home Singing.**

Contains Songs of the Months; Songs to illustrate—The Life and Work of Jesus Christ; Heroism, Duty and the Christian Virtues; Play; Bible Stories—Old and New Testaments; Nature Talks; Opening and Closing Worship; Marches—Vocal and Instrumental; The Seasons, with a Number of Pieces suitable for Week-Day Use.

*An Introduction to Statistical Methods.* A textbook for college students, a manual for statisticians and business executives. By Horace Secrist, Ph.D. (10s. 6d. net. Macmillan.)

A book which is typically American in spelling, language, choice of example and as representative of the publisher's art. As an introduction to statistics it is sound; all ordinary terms and methods are explained. Particularly clear are the chapters on Diagrammatic Representation and Graphical Representation, while the exposition of "Average," "Median," and "Mode" is excellent. As a whole the book is complete and comprehensive; highly technical, though professedly non-mathematical and informative, without being pedantic and diffuse. It should be of value to every student of economics, though we should welcome an English edition with examples from English industry. The author's debt to Bowley is, of course, a large one, but is fully acknowledged. The synopsis of contents, the plates, the bibliographies at the end of every chapter, and the indexes are all admirable. F. F. P.

*A First Course in the Calculus (Part I).* By William P. Milne, M.A., D.Sc., and G. J. B. Westcott, M.A. 3s. 6d. Bell.)

"If the elements of the Calculus are based on geometrical imagery, the young student finds the study of the Calculus not too hard and well worth his efforts." Starting from this standpoint, this short course, without using any trigonometry, introduces the methods and a great number of practical applications of the Calculus. The only derivative dealt with is that of  $\sigma$  and its combinations; even product and quotient form are not mentioned. The book can thus be used with pupils of fifteen or sixteen, and cannot fail to interest them and stimulate all their mathematical work.

If one may criticize so useful a book, it seems rather out of place to introduce the idea of curvature, and the whole of Chapter X on Centres of Gravity, Moments of Inertia, and Centres of Pressure would perhaps have been better left for Part II. The book will be welcomed by very many teachers who have wished to introduce this eminently practical subject earlier in the school curriculum.

It only remains to add that the Historical Introduction could not be bettered. A. R. T.

## Chemistry.

*Organic Compounds of Arsenic and Antimony.* By Gilbert T. Morgan. (16s. net. Longmans.)

Nearly to the end of the nineteenth century, "Organic Chemistry" comprised almost exclusively the compounds of carbon with hydrogen, oxygen, nitrogen, and sulphur. Exceptions to this rule were few, and none was of technical importance. To this list of elements must now be added (among others) arsenic and antimony, which are shown to form large classes of compounds, each class consisting of series of members characterized by well defined properties in common. These compounds are dealt with very thoroughly in Prof. Morgan's treatise. Instead of following the time-honoured custom of works on Organic Chemistry and grouping his compounds into classes—such as (1) arsines: (a) primary, (b) secondary, (c) tertiary; (2) chlorarsines: (a) primary, (b) secondary; (3) arsenious oxides, and so on—the author has followed a classification which appears to be roughly (but yet not strictly) chronological. It may be objected that this arrangement does not make the subject matter easily intelligible to the reader on first acquaintance, but for the advanced student the historical method has many points in its favour.

First are described the cacodyl compounds, which are essentially the secondary methyl members of the large classes of chlorarsines ("cacodyl chloride"), arsenious oxides ("cacodyl oxide"), arsenic acids ("cacodyl acid"), &c. Chapters then follow on aliphatic and aromatic arsenicals and antimonials, and the two subjects are treated in what may be described as good and comprehensive essays.

The Béchamp reaction is then discussed in considerable detail in a chapter on Atoxyl, which leads up to an account of the manner in which, by application of this reaction, numerous substances of therapeutic value—some of highly complicated

structure—have been prepared. The chapters which follow, headed "Salvarsan" and "Neosalvarsan" respectively and a later chapter on "Luargol," detail results of more recent work of a purely technical nature on substances having a therapeutic action. The remaining chapters of the book are concerned with "Aromatic primary arsines," "Aromatic antimonials," and "Miscellaneous organic derivatives of arsenic and antimony." Probably because of the miscellaneous compounds dealt with, a lack of co-ordination of facts is here noticeable.

The book concludes with an appendix in which methods of analysis of organic arsenic and antimony compounds are described, and a very useful bibliography. As the first book in English dealing with organic arsenic and antimony compounds Prof. Morgan's monograph is particularly valuable and can be highly recommended. T. S. P.

*The Applications of Electrolysis in Chemical Industry.*

By A. J. Hale. (7s. 6d. net. Longmans.)

This monograph gives details of the electrolytic methods for winning various metals, for manufacturing hydrogen and oxygen, and for the production of caustic soda, chlorine, and salts of the oxy-acids of chlorine. Some dozen inorganic compounds, such as white lead, persulphates, &c., are also dealt with, and brief reference is made to the electrolytic production of organic compounds. The author has apparently made a thorough search of the literature on the subject, and all the important processes are given; the monograph should form a very useful reference book on the subject.

It would have been much better, however, if the author had given freer rein to his critical faculties, since then the description of some processes would probably have been cut out altogether. For example, Borchers' method for making sodium from fused sodium chloride is given, together with a diagram, whereas, as far as the writer of this review is aware, it has never been used to any extent, since it could not compete with the method making use of fused sodium hydroxide. At least one well known writer of a textbook on Inorganic Chemistry gives a description of Borchers' process, which seems to be such a delightfully simple one, as a going concern, and such a thing is likely to happen again if the error is perpetuated in a monograph on the subject. In view of the work of Leblanc, which is mentioned by the author, Beckers' modification of Castner's process for making sodium does not seem to be of much value, and the question may be asked as to whether the Acker process for sodium hydroxide has been resuscitated since the works were burnt down some years ago. The space allotted to these processes could be better used, for example, in describing more clearly the stirrer in the Edsa-Wilderman cell, as the mechanism is not clear from the text, and in a fuller account of the Haas-Oettel cell. Surely something has gone wrong with the account of the Solway-Kellner cell, and is it entirely correct to say that in mercury cells, such as the Castner-Kellner, the amalgam is decomposed by water?

In referring to persulphates (page 134), the inference to be drawn from the text is that a high-current density is necessary at both electrodes, whereas it is used only at the anode.

In the Introduction, a useful account is given of the general principles of electrolysis, and an explanation of the terms relating thereto, but even here there is a tendency to too much condensation at the expense of clearness. At times the author is fond of referring to some one explanation of phenomena which are little understood, as, for example, on page 5, where he writes, "possibly the heat of hydration of the ions furnishes the energy necessary for ionization"; and on page 10, where reference is made to Spear's theory of the influence of colloids on electro-deposition. Such references are best left out. On page 7 occurs the well worn but incorrect statement that it is possible to calculate from the heat of formation of compound the voltage necessary to decompose it. How often will it be necessary

(Continued on page 150.)

# BLACKIE'S

BOOKS FOR THE

## STUDY OF ENGLISH.

### PICTURE COMPOSITION.

Teaching of English through Pictures.

By LEWIS MARSH, M.A., Head Master of Ealing County School. In Three Books, each containing 16 full-page beautifully coloured Pictures and many other Illustrations. Cloth covers, 9d. each.

### PREPARATORY COURSE OF LITERARY READING AND COMPOSITION.

Edited by LEWIS MARSH, M.A. Illustrated from Famous Paintings. 2s.

### SENIOR COURSE OF LITERARY READING AND COMPOSITION.

Illustrated from Famous Paintings. Edited by LEWIS MARSH, M.A. 2s. 6d.

### WORDS: THEIR ORIGIN AND USE.

A Correlated Scheme of Spelling, Derivation, Reading, Dictation, and Composition. By F. W. CHAMBERS and A. J. KER, Northfield Boys' School, West Ealing, London. In two Books, each with a companion Teachers' Book, 10d. each. TEACHERS' BOOKS, containing the Scholars' Books and 40 additional pages of Notes. 1s. 6d. net.

### POETIOA: A Book of English Verse for Repetition.

Chosen and arranged by JOHN RIDGES, M.A. (Cantab.), sometime Head Master of Leighton Park School, Reading. Illustrated with Portraits. Divided into three Parts for the three school years ending at 15 or 16. Daintily bound in art linen, 2s. 6d. net. Also issued in four Parts, cloth covers, 10d. net each.

### THE CALL OF THE HOMELAND.

A collection of English Verse. Selected and arranged by R. P. SCOTT, LL.D., and KATHERINE T. WALLAS, M.A. In two Volumes. 2s. 6d. net each. Also, in one volume, cloth elegant. Suitable for presentation, 5s. net.

Book I. Echoes from History—Britain Overseas—The Sea—The Changing Year.

Book II. The English Countryside—Home—Exile—Compatriots—The Call to Serve—The Call to Happiness.

### ENGLISH POETRY FOR THE YOUNG.

Compiled and edited by S. E. WINBOLT, M.A., Christ's Hospital, 1s. 6d.

### AN EDGBASTON POETRY BOOK.

For Girls' Schools. Edited by EDITH M. COLMAN, Edgbaston High School for Girls, Birmingham. 2s. net.

### BLACKIE'S ENGLISH TEXTS.

Edited by W. H. D. ROUSE, Litt.D., Head Master of the Perse School, Cambridge. A wealth of material for the literary study of English. Each book has a brief introduction dealing with the author's life and place in literature, but no notes. Over a hundred volumes are now in the series, offering a wide field for selection in General Literature, Travel and History.

### BLACKIE'S SMALLER ENGLISH CLASSICS.

Selections from Standard Authors. Edited by Competent Scholars, with Biographical Sketch and Explanatory Notes. Each, paper, 3d.; limp cloth, 5d.

### THE JUNIOR SCHOOL SHAKESPEARE.

A series of the greater Plays, edited, with Introduction, Notes, &c., by Experienced Scholars, for Junior Students and Junior Candidates in the University Local Examinations. The Plays are edited chiefly from the literary standpoint, although philological notes, where such are required, are given. Clearly printed and neatly bound in limp cloth covers. With Coloured Frontispiece. Price 10d. each.

### THE PLAIN-TEXT SHAKESPEARE.

A neat edition of the greater plays of Shakespeare, presented in a serviceable form at a cheap price. The text follows the well-known Junior School Shakespeare, which omits everything that might be thought undesirable in class reading. Cloth covers, price 7d. each.

### THE PLAIN-TEXT POETS.

With Introductions by teachers of experience and position, but no further notes are given. With Frontispiece, neatly bound in cloth covers, limp, 10d. each.

### THE MODERN CLASS-BOOKS OF ENGLISH.

A Complete Preliminary Course in Composition, Word-building, Phrase-building, Spelling, Grammar, and Analysis. By F. W. CHAMBERS and A. J. KER. In five Books, each with Companion Teachers' Book.

**BLACKIE & SON, LTD.,**  
50 OLD BAILEY, LONDON, E.O.4.  
GLASGOW AND BOMBAY.

By Special

Appointment.

To their Majesties the King and Queen and H.M. Queen Alexandra

## WINSOR & NEWTON,

### Prepared Water Colours,

IN

WHOLE and HALF CAKES, WHOLE, HALF, and  
QUARTER PANS,

and WHOLE, HALF, and LARGE TUBES.

QUARTER PANS of Winsor and Newton's Artists' Water Colours are of the same outside dimensions as the Half Pans. They may, therefore, be used in Winsor and Newton's range of Half Pan Japanned Boxes.

The advantages of habituating the Student at the outset of his career to the use of the BEST materials are so obvious that no attention need be drawn to them.

Messrs. Winsor and Newton's Artists' Water Colours are necessarily more expensive than those usually manufactured for School use, but as, owing to their superior strength, a small quantity yields approximately the same amount of colour surface as the larger pans of Water Colours generally sold for Students' use, the expense in both cases is much the same.

The special attention of Teachers and the public is, therefore, invited to these Quarter Pans of Colour, which, costing practically the same, provide the Student with a superior article.

Full detailed catalogue may be obtained from any of the leading Artists' Colourmen throughout the Country, or from 39 Rathbone Place, London, W.1. Established nearly a Century.

## TUITION BY POST.

Practical Training in

## SHORTHAND,

BOOK-KEEPING AND ACCOUNTANCY,

COMMERCIAL PRACTICE, BANKING,

ADVERTISING, COMMERCIAL LAW.

Pitman's Postal Courses are admirably adapted for teachers who are unable to take advantage of the ordinary facilities for receiving oral instruction, but desire to qualify in commercial subjects. Each lesson is a full exposition of that part of the subject covered. One course, or any group, may be commenced at any time, and from any stage of present knowledge.

Write for details, stating the subjects in which you are interested.

*Pitman's School*  
BUSINESS SECRETARIAL & CIVIL SERVICE TRAINING

The Leading Teachers' Training Centre in the Kingdom for  
Commercial Subjects.

Principal: FREDERICK HEELIS, F.R.S.A.,  
180 SOUTHAMPTON ROW, LONDON, W.C.1.  
Seven London Branch Schools, and at Bristol and Leeds.

to emphasize that this is only true in a limited number of cases, where the temperature coefficient of the electromotive force is nil?

Throughout the book, hydroxide ion (OH<sup>-</sup>) is often loosely referred to as "hydroxyl"; on page 2, the cupric ion is written as "Cu" or "Cu<sup>++</sup>"; and on page 3, the chloride ion as Cl<sup>-</sup> or Cl. It is, however, a pleasure to note that the author has escaped from the yoke of the usual explanation of the formation of chlorates by the interaction of chlorine and alkali hydroxide, and gives some account of the valuable work of Foerster and Müller in this connexion. T. S. P.

*The Zinc Industry.* By Ernest A. Smith.  
(10s. 6d. net. Longmans.)

It has required a war to awaken England fully to the position she was in with respect to the zinc industry. The awakening came just in time, as in the course of a few more years it would probably have been found that the main supplies of zinc ores had been cornered by German competitors. To quote the author's words, "It may have been the absence of a special literature dealing with the position of the zinc industry in recent years that partly accounts for the lack of interest hitherto shown in this branch of British metallurgy," but in any case this interest has now been fully awakened. The gap in the literature is now admirably filled by the publication of the present monograph, in which are given a general survey of the development of the zinc industry and a discussion of its present and possible future position in relation to the various metal industries of the country. Technical details are only briefly referred to, but the general student will find an adequate and interesting account given of the subject. The statistics given are especially valuable at the present time. The book is specially to be recommended, and worthily fulfils the object for which it was written. P.

### Biology.

*Civic Biology.* A Textbook of Problems, Local and National, that can be solved only by Civic Co-operation. By Prof. Clifton F. Hodge and Dr. Jean Dawson. (7s. net. Ginn.)

There has been no paper shortage in America, judging by this excellently produced book. The idea of the book is expressed in the coloured frontispiece; the question, "A man-made Paradise or a man-made desert—which?" being applicable to every landscape and home in the world. The authors write mainly for teachers, and American teachers primarily; but teachers in this country may derive considerable stimulus and guidance on the lines of what might be called Applied Nature Study. The Nature-study craze of ten years ago has apparently led nowhere; in fact, it has lost its original freshness, so that now we see such things as "a railway engine" figuring as a subject for Nature Study, and we find many teachers content to let their pupils study pictures of squirrels or camels, fondly imagining that they are fostering a love for Nature. This book clears the air once more and shows us the true purpose of Nature Study.

The range of topics dealt with is very wide. Birds, trees, forestry, weeds, poisonous plants, house flies, mosquitoes, cabbage butterflies, mites and ticks are each dealt with and considered from the point of view of their harmfulness or helpfulness to man and his industries. The authors see that the only way to attempt to stamp out some or all of the many preventable diseases and "plagues" that afflict mankind is to educate the community through the school, so that all may co-operate. They point out that at present we merely drive the pests—*e.g.*, rats—from our barns to our neighbours' barns—and *they come back*.

Accordingly they deal very fully and forcibly with rats, filth flies, malignant bacteria, rusts and smuts, and animal parasites. In fact, they present their case so well that, after reading this part of the book, one feels almost afraid to live for fear one might die.

Intelligent bird study is advocated, but we miss practical advice on how to proceed—*e.g.*, advice on the value of field-glasses and telephoto-snapshots, on devices for camouflaging the observer, and on how to discover the food of birds without killing them and examining the contents of their crops.

The book emphasizes the application of biological knowledge to public hygiene, and suggests that the house-fly pest may be stamped out if the methods recommended are followed. "No man who does not know better than to put his bare hand over a milk bottle, or a woman who does not know better than to take candy from a tray with her bare fingers, has any right to serve the public. Our millions of preventable infections, and our more than 500,000 deaths annually, are the measure of our need in this direction." We need a book on similar lines written for English conditions, and we need a sister society to the American Civic Association, which "stands for more beautiful homes and country roads, more beautiful towns, the abatement of smoke and bill-board nuisances, and the conservation of natural beauty."

The authors urge the civic planting of vines in public places. We are not altogether behind in this country, since one northern suburb of London has already planted fruit trees in its public grounds. It rests now with teachers to bring up their pupils in the right civic spirit, to regard these fruit trees with respect. The allotment movement in this country should support the authors in their claim that "every community organization ought to have a committee on fungous diseases of plants and their practical control." Dover set an example in 1918 by paying for 25,000 cabbage-white butterflies at 4d. per 100.

In any future edition Plates II and III should be inserted at page 162, and "host" substituted for "boast" (page 175); and some loose statements on pages 197, 206, 249 should be amended. English readers should not be misled by the statement, on page 301, that 231 cubic inches of water, weighing 8.34 pounds, make a gallon. The authors are speaking of the American gallon, and are correct.

H. V. DAVIS.

### Music.

- (1) *Singing Class Music.* (E. Arnold.) (2) *The Laureate Song Book: Part I.* (E. Arnold.) (3) *The Yearbook Press Series of Unison and Part Songs:* Nos. 144-150. (4) *Peasant Dances.* Compiled by Mrs. Kimmins. (Evans Bros.)

Not so long ago, if one wanted songs for children, it was necessary to be content either with the old nursery Rhymes or with very poor stuff written by incompetent amateurs. To-day, composers of note are working in this field, and some of them with notable success. Many of the songs in "Singing Class Music," notably Stanford's "Haymakers' Roundelay" and Nicholson's "The Dandelion," also "The Butterfly's Ball" (Silver) and "Threnody" (Buck), in the Yearbook Press Series, just hit the happy mean between triteness and modernity. But is there anything to be gained by introducing far-fetched and sometimes clumsy modulations, as in Whittaker's "Buttercups and Daisies" and "The Squirrel"? The composer, too, of "England all the Way" has avoided the commonplace only by introducing the ugliest of intervals. Studied originality has no charm for children. In nearly all the songs the pianoforte accompaniment is an essential feature, another departure from the older practice. Taken as a whole, the above series is well worth the attention of progressive teachers.

It is a question whether, apart from Mr. Dunhill's artistic accompaniments, the "Laureate Song Book" was really wanted. The old nursery rhymes have been well edited before, and to "mate long-cherished rhymes with new melodies" is, in our opinion, a retrograde proceeding. Nevertheless, to those who have no good edition of the old favourites, this collection can be commended.

A new volume by Mrs. Kimmins is sure to be welcomed. Provided one assumes that it is possible to acclimatize alien dances in England, this book should achieve its object. The musical part of the work is admirably done. The illustrations are lavish and the description of the movements will probably be intelligible to the expert teacher of dancing, although to the layman they look decidedly bewildering.

R. W.

- .. IV. Universities and the Workers.
- .. V. The Workers' Educational Association.
- .. VI. Educational Movements.
- .. VII. Organization of the Teaching Profession.

**50 CONTRIBUTORS—514 PAGES—THREE INDEXES.**

"Its title gives no idea of the contents of this remarkable volume. It contains, with other interesting material, a fascinating miscellany of *obiter scripta* on education by all sorts and conditions of thinkers and writers. . . . The editors' aim, they tell us, is to 'set people thinking about educational progress,' and the writers were given 'entire freedom to say what they pleased.' . . . The book, though by no means resembling the orthodox yearbook, deserves a wide circulation, for it will certainly not only 'set people thinking about educational questions,' but wondering why authorities with views so diverse manage to exert so much influence."—*Journal of Education.*

**Scripture.**

- (1) "The New Commentaries."—II *Samuel*. By G. W. Wade, D.D., and J. H. Wade, M.A. (3s. 6d. net. Murby.) (2) "Smaller Scripture Manuals." II *Samuel*. By the same Editors. (1s. 6d. net. Murby.)

These volumes form parts of two valuable series, already favourably known to teachers. These latest additions will be welcomed, especially as they deal with one of the most important books of the Old Testament, and one, moreover, which is especially useful for young students. Dr. Wade, of Lampeter, is a well known authority on Hebrew history, and the introduction to the Commentary is marked by ripe knowledge and a wise use of the results of recent researches. It forms an invaluable preliminary study, introducing the pupil to problems of criticism and to the consideration of sources and methods. The text of the Revised Version is printed in the upper part of each page, the Commentary finding a place in footnotes. These notes are admirably done, and each section of the story has an explanatory preface of great service. The smaller volume is an adaptation of the Commentary for more youthful pupils. Both volumes are excellently produced, and in this respect are worthy of the care and skill which has been bestowed by the Editors.

**General.**

*University Olympians*. By A. P. Baker.  
(Haffer & Sons.)

Mr. A. P. Baker knows his Cambridge thoroughly and gives a series of twelve University Sketches in heroic couplets, which often possess wit, antithetical turn, and neat alliteration. "Behind the Backs" strikes us particularly as happily touching on a less familiar side of University life. Here and there Mr. Baker's technique could be improved, as in the first line of "Inceptor in Arts."

*How to become a Woman Doctor*. By Emily L. B. Forster.  
With a Foreword by W. J. Fenton, M.D., F.R.C.P., Dean of the Charing Cross Hospital Medical School. (3s. net. Charles Griffin.)

The war has had the effect of greatly increasing the number of women who desire to undertake a medical career; and the passing of the Education Act, with the coming Health Ministry, will extend the scope of work open to women doctors. Hence this little volume is most timely and useful, giving, as it does, in the clearest possible manner, full particulars of the many avenues to the profession. Dr. Fenton urges that in a profession practised by both sexes working together under similar conditions, it has come to be realized that the best results are more likely to be obtained if their educational opportunities are identical. He says the experiment of co-education in medical schools has been a success. Head mistresses of secondary schools should have this book at hand for reference when consulted by their pupils concerning a medical course.

*Children's Garments*. By Emily and Marian Wellbank.  
(5s. Pitman.)

For the patterns in this book we have nothing but praise. But it is difficult to recommend anyone to adopt this means of obtaining a pattern by measuring and plotting out on paper when a cut-out specimen can so easily be secured. The mother of a family who makes her children's garments generally chooses the more expeditious method of laying a cut-out pattern on her material. As a means of teaching a class of pupils to draft patterns it would serve a useful purpose, but even in this case who could object to labour and time being saved by the use of a ready-cut pattern?

M. E. R.

**PUBLISHERS' ANNOUNCEMENTS.****Cambridge University Press.**

Miss Florence L. Bowman, Lecturer in Education at Homerton College, Cambridge, has written a history for beginners entitled, "Britain in the Middle Ages," shortly to be published by the Cambridge University Press. The book is fully illustrated with reproductions of medieval pictures.

# TEACHERS REGISTRATION COUNCIL.

REPRESENTATIVE OF THE TEACHING PROFESSION.

(Constituted by Order in Council, 29th February, 1912.)

---

---

## OFFICIAL LIST

OF

## REGISTERED TEACHERS.

---

---

The Statutory duty of the Council is to frame and keep a Register of Teachers, and a list of those registered under the conditions prescribed by the Council will be published from time to time. The first list was issued in 1917, and the second one is now in course of preparation.

In addition to its statutory duty, the Council has acted in co-operation with the Board of Education in many important matters affecting the interests of Teachers.

Up to and including Thursday, the 10th April, 1919, the number of applications for admission to the Register was 26,500. All qualified Teachers who have not already registered should write at once to:—

THE SECRETARY,  
TEACHERS REGISTRATION COUNCIL,

47 BEDFORD SQUARE,

LONDON, W.C. 1.

**VISITORS TO THE N.U.T. CONFERENCE**

are cordially invited to visit our Stall in the Publishers' Exhibition.

**EDUCATIONAL DEMONSTRATIONS**  
in Plasticine and Nov-lart will be given at frequent intervals by

Details on application to—

The DALCROZE SCHOOL OF EURHYTHMICS, Ltd.,  
23 Store Street, London, W.C. 1.

**The Incorporated London Academy of Music.**

**DR. YORKE TROTTER'S TRAINING COURSE FOR TEACHERS.**

The Course includes:—

**RHYTHMIC METHOD IN ALL ITS BRANCHES,**  
**MUSICIANSHIP, HARMONY, EAR TRAINING,**  
**&c. PIANO TECHNIQUE.**

*Class Management and Preparation of Lessons.*  
*Voice Production and Teaching of Class Singing.*

**The New Term begins on May 7th, 1919.**

Full particulars as to the Course, fees, &c., can be had from the **SECRETARY,** 22 Princes Street, Cavendish Square, W. 1.

"Dr. Yorke Trotter, having brought the mental realm and psychology into his Rhythmic Method of Music, has, in the widest sense of the word, made it religion—the worship of the good, which, in the Greek, is synonymous with the beautiful."

**DUSTLESS**

**and HYGIENIC ROOMS**

In **SCHOOLS, LABORATORIES, &c.**  
**USE** The British Made and Owned

Odourless, or Powerful Germicidal

**FLORIGENE**

(A Regd. Name suggested by FLOOR-HYGIENE)

**EARLY** in the **EASTER VACATION**  
for best results.

"Florigene" has been continuously used for many years on Wood, Concrete, and Stone floors of every description, also on Linoleum and Cork Matting in Government and Municipal Buildings, and in all kinds of Schools, and other Institutions in the United Kingdom and Colonies.

"Florigene" costs little, is easily applied by unskilled, and saves time and labour.

It is **IMPORTANT TO NOTE** that

**ONE APPLICATION** of "Florigene" **ALLAYS** THE DUST and DIRT for **2 to 12 months**, according to traffic, not only during each sweeping (without Sprinkling of any kind) but also throughout all the intervening periods — which is of greater hygienic importance.

These sanitary, labour-saving, and economic advantages are **NOT** attained by sweeping-powders or any other method.

Not sticky—the ordinary daily dry sweeping alone required—Scrubbing being optional.

"Florigene" is strongly recommended by **Medical and other expert authorities.**

**A Head School Mistress** writes:—

"I am glad to have the opportunity of recommending 'Florigene.'" We have used it regularly on both wood and linoleum, and found its effects most beneficial, both in laying the dust and preserving the surface."

(Repeat orders since received.)

**A Grammar School Head Master** writes:—

"We have used your 'FLORIGENE' for several years in this School, and we have found it excellent in keeping down dust, which is now never to be seen anywhere. I believe the health of this School has been better since. The air is certainly more pleasant to breathe when movements are going on; there is also a great saving of labour in cleaning."

(Repeat orders since received.)

Numerous other Testimonials can be produced.

Send for particulars, Medical Reports, &c., to

THE  
EDUCATIONAL TIMES.

A REVIEW OF IDEAS AND METHODS.

156

(Founded 1847.)

April 1919.

IMPORTANT EDUCATIONAL BOOKS

Second large Edition in the Press.

**THE PLAY WAY.**

An Essay in Educational Method.

By H. CALDWELL COOK, M.A.

Demy 8vo, Illustrated from Photographs. 8s. 6d. net.

"The book is of the first rank, and we feel that our duty at the moment is to secure that it should be singled out for close study by all who are prepared to revise their methods when fresh light is presented."—*Journal of Education*.

**THE PEOPLE OF ENGLAND.**

A Social History for Schools.

By STANLEY LEATHES, C.B., M.A.

Vol. I. **THE PEOPLE IN THE MAKING.**

From the Earliest Times to the Invention of Printing.

Vol. II. **THE PEOPLE IN ADVENTURE.**

To the French Revolution.

Each volume 320 pp., with over 100 Illustrations. 3s. 6d. net.

"We hope that Mr. Leathes's work, besides delighting the child with its unfailling fertility of interest, may stimulate the teacher to make such methods his own. . . . The pictorial illustrations are many and well chosen."—*Times*.

HEINEMANN'S SCIENCE MANUALS.

**INTRODUCTORY ELECTRICITY AND MAGNETISM.**

By CARL W. HANSEL, B.Sc.

Over 300 Illustrations and Diagrams. Crown 8vo. 2s. 6d. net.

A complete first course in electricity and magnetism based upon actual experiment, and embracing the recent changes and recommendations of the Board of Education's new syllabus.

**A FIRST-YEAR COURSE IN GENERAL SCIENCE.**

A Combined Text-book and Note-book.

By E. A. GARDINER, M.A., F.C.S.

3s. 6d. net.

This book presents an experimental course of general elementary science, and is an attempt to save time for the boy and labour for the teacher. It is divided into three sections:—I, Simple measurements. II, Some Common Apparatus and Instruments. III, Properties of Water and Air.

**EXPERIMENTAL DOMESTIC SCIENCE.**

By R. H. JONES, M.Sc., F.C.S.

With over 80 Illustrations and Diagrams. Crown 8vo.

2s. 6d. net.

This book provides a suggested course for Domestic Science Schools and Girls' Schools generally, based upon the view that Science can be directly and adequately taught in the kitchen. The chief scientific principles in their application to domestic subjects are made clear by drawing upon everyday experience, and by the aid of kitchen utensils and commodities.

**EXPERIMENTAL MENSURATION.**

An Elementary Text-book of Inductive Geometry.

By H. S. REDGROVE, B.Sc. (Lond.), F.C.S. 2s. 6d. net.

The special feature of this book is the combination instead of the usual separation of Elementary Geometry, Trigonometry, and Mensuration. It is suitable for first and second-year students of Technical Schools.

NOTE.—Mr. Heinemann will be glad to hear from teachers who have manuscripts on educational matters which they desire to publish.

The Only Authorised Books on the Montessori Method.

**THE MONTESSORI METHOD.**

By Dr. MARIA MONTESSORI.

Illustrated. 8s. 6d. net.

In this book Dr. Montessori gives a clear explanation of her method and the principles upon which it is based.

**DR. MONTESSORI'S OWN HANDBOOK.**

A Manual for Teachers and Parents.

3s. 6d. net.

As a supplement to her larger book on the Method, Dr. Montessori has produced this explanatory manual, which is invaluable for all teachers.

A New Montessori Book.

**THE ADVANCED MONTESSORI METHOD.**

By Dr. MARIA MONTESSORI.

Vol. I. **SPONTANEOUS ACTIVITY IN EDUCATION.**

8s. 6d. net.

Vol. II. **THE MONTESSORI MATERIAL FOR CHILDREN UP TO ELEVEN YEARS.** 12s. 6d.

net.

"A contribution to scientific pedagogy such as we have not had since the institution of the kindergarten eighty years ago."—*School Guardian*.

**A COMMON-SENSE ALGEBRA.**

By ASA BURNISTON, L.C.P. (Hons.).

1s. 6d. net. With Answers, 2s. net.

Suitable for use in the Upper Classes of Elementary Schools, in Evening Schools, and in the Lower Forms of Secondary and Technical Schools. An extremely useful and enlightened introductory algebra.

**ELEMENTARY BUSINESS TRAINING.**

By V. H. ALLEMANDY.

Crown 8vo. 3s. net.

This book is intended for use in the Upper Classes of Elementary Schools and in Commercial and Evening Classes.

**THE BRITISH ISLES.**

By A. B. ARCHER, M.A.

Illustrated. 2s. 6d. net.

This is the first book in a new series, forming a Secondary School course in Geography, and is suitable for the Lower Middle Forms.

**AVENTURES ET MERVEILLES.**

A Simple French Reader for Junior Forms.

By C. V. CALVERT, B.A.

Crown 8vo. 300 pp. Illustrated. 2s. 6d. net.

**FRENCH TRANSLATION AND COMPOSITION.**

By H. J. CHAYTOR, M.A., and E. RENAULT, B.A.

Crown 8vo. 2s. net.

**SCIENCE AND EDUCATION.**

Edited, with an Introduction, by Sir RAY LANKESTER.

1s. 6d. net.

This volume contains seven lectures which were delivered by Whewell, Faraday, Latham, Daubeny, Tyndall, Paget, and Hodgson before the Royal Institution in 1854.

LONDON: WILLIAM HEINEMANN, 20-21 Bedford St., W.C.2.

## THE TEACHERS REGISTRATION COUNCIL.

Representative of the Teaching Profession.  
Constituted by Order in Council  
29th Feb., 1912.

The Council maintains an Official Register of Teachers who have been accepted for admission under the Conditions of Registration.

The Register is open to qualified teachers in every branch, and until the end of 1920 experience under approved conditions is the sole qualification required. After that date the conditions will become more stringent.

Particulars and Forms of Application may be obtained from

The SECRETARY,  
Teachers Registration Council,  
47 Bedford Square,  
London, W.C.1.

## THE COLLEGE OF PRECEPTORS.

Incorporated by Royal Charter.

BLOOMSBURY SQUARE, LONDON, W.C.1.

### MEMBERSHIP.

Membership of the College is open, under certain conditions, to persons engaged in education.

Particulars concerning the privileges of membership may be obtained from the Secretary.

### MEMBERS' DINNER.

In commemoration of the seventieth year of the Incorporation of the College by Royal Charter, a Dinner for Members and their friends will take place at the Connaught Rooms, Great Queen Street, W.C., on Friday, the 20th of June.

### DIPLOMA EXAMINATIONS.

The Regulations for 1920 will be ready for issue in June. Special provision will be made for the admission of teachers of Music, of Art, of Commercial subjects, and of other special branches.

## THIS ISSUE CONTAINS:

Essays on

Simple Laboratories,

Some Foreign Masters,

and

Peace Celebrations.

With a SUPPLEMENT on

The Annual Conference

of the

National Union of Teachers.

## THE ASSOCIATED BOARD OF THE R.A.M. AND R.C.M.

FOR LOCAL EXAMINATIONS IN MUSIC.

Patron: HIS MAJESTY THE KING.

**LOCAL CENTRE EXAMINATIONS (Syllabus A)**  
Examinations in Theory held in March and November at all Centres. In Practical Subjects in March-April at all Centres, and in the London District and certain Provincial Centres in November-December also. Entries for the November-December Examinations close Wednesday, October 15th, 1919.

**SCHOOL EXAMINATIONS (Syllabus B).**  
Held throughout the British Isles three times a year, viz., October-November, March-April, and June-July. Entries for the October-November Examinations close Wednesday, October 8th, 1919.

Specimen Theory Papers set in past years (Local Centre or School) can be obtained on application. Price 6d. per set, per year, post free.

The Board offers annually SIX EXHIBITIONS, tenable at the R.A.M. or R.C.M. for two or three years.

Syllabuses A and B, entry forms and any further information will be sent post free on application to—

JAMES MUIR, Secretary,  
14 & 15 Bedford Square, London, W.C.1.

Telegrams: "Associa, London."

## THE INCORPORATED SOCIETY OF MUSICIANS.

Founded 1882. Incorporated 1892.

### OBJECTS OF THE SOCIETY.

The objects for which the Society is established are the promotion of whatever may tend to the elevation of the status, and the improvement of the qualifications, of all Members of the Musical Profession, or may aid the musical education of the people.

### ADVANTAGES OF MEMBERSHIP.

A Benevolent Fund for members, the Regulations for which have purposely been made as wide as possible in order to meet the many and very varying contingencies which arise from time to time.

An Orphan Fund for the children of musicians, which is open to the dependents of all musicians, whether their parents were members of the Society or not.

Legal advice on all professional matters: Income Tax Claims; Copyright; The Recovery of Fees, &c.

Registers open to members of "Vacant Appointments" and "Engagements," and for the transfer from member to member of pupils moving to new districts.

### LOCAL EXAMINATIONS IN MUSIC.

The examinations of the Society, established in 1884, are carefully arranged in a systematic series of Progressive Grades, embracing a complete course of musical study, and constitute a most valuable guide for Teachers in recording the progress of their pupils.

Full particulars may be obtained upon application to the General Secretary, 19 Berners Street, W.1.

## UNIVERSITY CORRESPONDENCE COLLEGE

(Founded in 1887).

### PRINCIPAL:

WILLIAM BRIGGS, LL.D., D.C.L.,  
M.A., B.Sc., F.C.S., F.R.A.S.

## LONDON UNIVERSITY DEGREES.

(Graduates of British Universities and holders of certain Diplomas can register as matriculated students of London University without passing the Matriculation Examination.)

### A SHORT GUIDE

to London University Examinations, giving full Particulars of Courses and Fees, post free to PRIVATE STUDENTS from—

THE SECRETARY,

No. 15 BURLINGTON HOUSE, CAMBRIDGE.

# NORMAL

**53 VICTORIA STREET, WESTMINSTER, S.W.1.**

Telephones Victoria 4163 and 5942.

**CONVEYANCING DEPARTMENT.**

This Department is now under the direction of **Mr. F. C. NEEDS, B.A.**, whose experience, advice, and assistance are unreservedly placed at the disposal of **Purchasers** free of charge.

**TRANSFERS and PARTNERSHIPS arranged by correspondence or interview.**

**INSPECTIONS and VALUATIONS undertaken.**

An **unusual opportunity** offers itself to a young energetic lady of good social position, with educational qualifications, to acquire a **partnership** in one of the best **Finishing Schools** near London. Sound investment, but monetary consideration of secondary importance.

**FOR SALE (inter alia).**

- In Home Counties.**—A Partner (married) required in a high-class Boys' Preparatory School of about 60 Boarders. The Premises are Vendor's Freehold and contain Private Chapel, Swimming Bath, Gymnasium, and stand in about 15 acres of grounds. The School is full and the price asked for the half-share of the goodwill, school furniture, plant, and apparatus, £3,000.
  - Cheshire.**—High-class Girls', unopposed, and situated in a wealthy and hunting centre. 8 weekly Boarders, and 12 Day, all at high fees. Receipts about £1,000. Excellent premises. Expenses small. A lady of good social position and education would find this a unique School and investment. Goodwill £400.
  - On the Borders of the Peak District.**—Flourishing Girls' and Boys' Preparatory of 80 pupils, of whom a few are Boarders. Receipts £1,350 last year. Profits over £600. Splendid investment for two ladies, or for a married gentleman whose wife could assist with the girls. Goodwill and all School furniture, &c., 700 guineas.
  - South Coast.**—Flourishing Girls' School. 13 Boarders, 40 Day pupils. Receipts over £1,200. Expenses £800. Goodwill only £100. House and School furniture at valuation. Freehold premises £750. Mortgage arranged.
- Ladies of education and good experience, with capital of from £2,000 to £3,000. Excellent investment in a high-class Ladies' School, situate in good premises and grounds on the South Coast.

## SCHOLASTIC APPOINTMENTS

University Men and Women seeking scholastic appointments should apply to

### **Truman & Knightley** —SCHOLASTIC AGENTS—LTD—

who introduce ASSISTANT MASTERS AND MISTRESSES to the majority of the leading Public and Private Schools at home and abroad.

*Through this Agency, well educated gentlemen with Higher Local and other good Certificates, interested in children and in teaching, can find congenial work in good high-class Private Schools, where the hours are not excessive, conditions pleasant, and the holidays are long. Salaries range from £50 to £100 or more per annum, with board and residence, according to age, qualifications, and experience. There are also many vacancies for Student and Junior Mistresses at salaries of from £30 to £50 per annum with board and residence.*

There is a separate department for

**LADY MATRONS and HOUSEKEEPERS**

for schools.

No charge for registration.

::

Moderate commission.

#### SCHOOL TRANSFER DEPARTMENT.

Ladies and Gentlemen seeking Partnerships in, or to take over schools of their own, should communicate personally with Mr. TRUMAN, who undertakes all negotiations connected with the Transfer of Schools, and who is in a position to offer assistance and sound advice to purchasers, to whom no charge is made.

**Offices: 158-162 OXFORD ST., LONDON, W.1**

Telephone: MUSEUM 1136.

# PATON'S LIST of SCHOOLS and TUTORS

**An Aid to Parents in the Selection of Schools.**

22nd ANNUAL EDITION NOW PREPARING.

EVERY YEAR THOUSANDS OF PARENTS  
:: :: CONSULT THIS BOOK. :: ::

"I am sending you the order for the twenty-first annual issue of your great book; and may the second period on which it has entered be of as much use and help in the educational world as the first."

"Please insert my pages as usual. I believe I get more pupils from that than from any other source."

"I enclose a request to have my notice renewed. I would not for anything leave it off now."

"You will possibly be glad to hear that a lady named \_\_\_\_\_ is sending her boy to me. In this case, she tells me, the name of the school was obtained from your List, and so, I believe, no further commission is due from me."

"When I first came here I spent over £50 in six months' advertising in the leading papers—result, **one** boy. Then I came under your agency—result, a **steady stream** of boarders every term, more than filling up the vacancies caused by boys leaving. I have already had to open another dormitory, and am on the point of 'venturing' on another boarding house."

"I find it most useful to my patients when seeking information about sending their boys and girls away, and have kept a copy in my waiting-room for some years."

"Two years ago you sent me a pupil named \_\_\_\_\_. Through her parents I have had **four** good pupils this year from four different places, and through two of these

I have **five** more coming this term: that is ten pupils from paying **one** commission."

"I have much pleasure in renewing the advertisement in your excellent Guide, and should like to take the opportunity to express to you my best thanks for the invaluable help of your agency."

"I enclose order form, duly signed. . . I am more than grateful for the excellent service your Agency does my school."

"I am returning the advertisement at once with a little addition. . . We have this term **four** pupils introduced by you, and I am much obliged to you for your help. It makes all the difference in these difficult days whether one has a full school or not."

**Specimen Copy and full particulars sent free of charge to  
Head Masters and Head Mistresses.**

**J. & J. PATON, Educational Agents,**

## NOTES AND COMMENTS.

### English in Schools.

AFTER science and modern languages, we are to have a Committee on English. Sir Henry Newbolt and his colleagues are charged to inquire into the position occupied by English (language and literature) in our educational system. They are to advise how its study may best be promoted in schools of all types, and are to have regard to the demands of a liberal education, the needs of business, the professions and public services, and the relation of English to other studies. Truly this is a wide field to explore, and the task will probably make extensive demands upon the energies of Sir Henry Newbolt and his fellow knight, Sir Arthur Quiller Couch, not to mention such authorities as Mr. J. H. Fowler, of Clifton, or Prof. Boas. An excellent opportunity is afforded for a major campaign between the philologists and the scribes, and for minor encounters between the grammarians and those who pine for "free expression." We shall probably be told that far too little time is given to the study of the mother tongue, and it is very likely that we shall be afforded little or no clue as to what the study really involves. At the outset of its labours the Committee might do worse than ponder over the well known passage in Milton's "Tractate," where he condemns the practice of forcing the empty wits of children to compose themes, verses, and orations, which are the acts of ripest judgment. . . . "They are not matters to be wrung from poor striplings like blood from the nose."

### Formalism.

THERE is a dangerous tendency in Departmental and other Committees to state their views in a form which is too precise and rigid. One of our educational newspapers has lately been revelling in a correspondence on the teaching of grammar and uttering solemn warnings on the decay of syntax. Yet even if grammar were taught most perfectly and the rules of syntax observed religiously, we might fail completely to achieve success in the literary art. An Oxford professor, who ought to have known better, once observed that the whole art of writing consisted in having something to say, combined with the ability to say it clearly. This naive attempt to place "Bradshaw's Railway Guide" in the forefront of our English classics recalls the foolish and misleading injunction, "Be good, and you will be beautiful." Young students of the literary art should begin by perceiving that there are different ways of saying the same thing, that the purpose of saying anything is to convey ideas, that this involves the use of conventional arrangements of words and some regard for accepted rules of grammar and syntax. Beyond this they should be encouraged to develop their own style, studying models if they choose, as Stevenson did when he "played the sedulous ape to Hazlitt," but always with the purpose of mastering the permanent principles rather than the current rules of expression.

**“Themes, Verses, and Orations.”**

SOME teachers seem to fail completely in their understanding of the purpose of English studies. Topics prescribed for essays are sometimes beyond any possible or desirable range of the schoolboy mind. Instead of asking the pupil to produce an essay on some subject with which he is familiar, the master will ride his own hobby and invite juvenile treatises on controversial topics in history or literature. Some years ago it was seriously proposed that candidates for matriculation in one of our provincial Universities should be asked to write an essay on Wordsworth's "Ode on the Early Intimations of Immortality." Fortunately it was realized that the philosophical disquisitions of youths of sixteen or thereabouts would probably have little value. We have broken away from the old fashion of demanding essays on such subjects as "A Stitch in Time saves Nine," but we are slow to perceive that the beginner finds the best practice in simple efforts at concise description, with frequent exercises in simple verse forms. The latter are often enjoyed by young people, possibly because verse came before prose as a form of literary expression and therefore makes a special appeal to the primitive mind of youth. Certainly we have found that boys will make a far more satisfactory attempt to write "The Reflections of a Scarecrow" in thirty lines of heroic couplets than they will to write thirty lines of prose on "The Character of Malvolio."

\*   \*   \*   \*

**The Army as a School.**

In a leading article recently the *Times* newspaper developed a remarkable argument in favour of universal military service. After commending the new scheme of Army education, which was described at first hand in our last issue, the writer goes on to say that we shall not go back to the small professional Army of pre-war days. The new Army will have a professional nucleus, but we shall no longer believe in keeping a small standing Army to train a large reserve. Instead, we must have in the reserve "the intelligence and muscle of the whole nation." The War has shown that we no longer want human machines as soldiers, and that the greater part of successful fighting is a transference of civilian virtues to another setting. Thus runs the argument, and one would suppose the right conclusion to be that a scheme of education which fostered civilian virtues to the greatest possible extent would afford the best preparation for war. The writer, however, draws a different conclusion—namely, that the right sort of Army may be a great popular University. Hence the larger the Army the better, since we ought not to limit opportunities for education. It is difficult to gather what this means. Is it proposed to place the new Army under the control of the Board of Education, or to hand our schools over to the Army Council? Are we to have a nation which possesses an Army or an Army which possesses the nation? If the Army is to be the supreme school of civic virtues, surely all our girls and young women must enrol at once.

**Doctors and Schools.**

PROBABLY there is little immediate risk of our schools being placed under the Army Council, but another Department of State is doing its best to capture them. This is the new Ministry of Health, the organization which is being shaped in the Committee room of the House of Commons. Despite the vigorous protests of Mr. Fisher, the Committee have decided that all the powers now exercised by the Board of Education in regard to the health of school children shall be handed over to the new Ministry. It will be remembered that the Board's powers under the Education Act were considerably extended so as to include continuation schools, secondary schools, and privately conducted schools. The doctors will now come in under the supervision of Sir Robert Morant, who will thus resume an important part of his former activities in connexion with education. We may be certain that the new medical service for schools will lack nothing of vigour, but there is a manifest danger of undue interference with the proper business of the teachers. The doctors have the knack of seeming confident and accurate in diagnosis. They speak as oracles concerning our bodily condition and needs, few daring to ignore their opinions. If and when they have the final voice in all that concerns the physical wellbeing of our school children, we may expect that the Board of Education and the teachers will find themselves compelled to assert with some vigour their rightful claims in the schools.

\*   \*   \*   \*

**Conferences and Opinions.**

OUR Supplement this month contains reports of the annual gathering of the National Union of Teachers. Taking with these the press notes of the Conference as it progressed from day to day during Easter week, we gather the impression that many of the rank and file of the members are in a truculent mood, and disposed to move more rapidly than their appointed Executive. In ordinary trade union circles this kind of thing is ascribed to want of "discipline," but such an indictment would surely not apply to teachers! The present position seems to us to be due to the fact that the members of the Union have many desires, but no co-ordinated policy. The Executive, faint yet pursuing, tries to construe the expressed wishes of its constituents in terms of a policy which shall be at once progressive and practicable. It is a difficult task, especially when in an important decision, such as the one on equal pay for men and women, it is found that only one-half of the members take the trouble to vote. As it is, the Executive is technically bound to press forward a claim which has been made formally by only one-third of the Union. The discussion on Whitley Councils was even more significant, for an alteration in the official policy was suggested and approved, so that, instead of promoting a central committee representing teachers and employing authorities, in association with the Board of Education, the Executive is

instructed to press for the establishment of teaching as a "self-governing profession," with full partnership in the administration of education.

\* \* \* \*

### Teachers as "Bolshevists."

THE opponents of the desire for full partnership in administration were quick to describe the proposal as "sheer Bolshevism." The assiduous labours of a certain section of our daily press have resulted in associating Bolshevism with every sort of wanton crime, and we should be slow to think that there are many potential criminals in the N.U.T. The advocates of a self-governing profession probably aim at nothing more than a recognition of their right to take part in framing the policy which they are later to carry out. It is becoming understood that teachers ought to be self-governing to the extent, at least, of having a share in deciding who shall be regarded as fully qualified to teach. A further need is that the individual teachers should feel that they have some share in educational policy beyond that of servants obeying orders. In every industry there is a growing desire on the part of the workers to gain a share in management. This is not primarily due to a desire for wealth. It is the outcome of a human need, for nobody can feel true happiness in work which is not in some measure the expression of his own personality. The factory system kills individuality in work, and the worst evil of bureaucratic control in education is that it treats schools as factories and our educational system as a commercial undertaking.

---

### AN IRISH SONG.

---

*Tune: "The Groves of Blarney."*

LEAVE me, leave me alone,  
As the night gathers fast,  
In the gloom and the silence,  
To dream of the past.

To you, and to many,  
The present is bright;  
But the dreams of the past  
Are my only delight.

Death has taken away from me  
Her I loved best,  
And the wild ocean rolls  
Between me and the rest.

No more, save in dreams,  
I my lost one may see,  
There is nothing but memory  
Left unto me.

T. H. BROWN.

### SIMPLE LABORATORIES.

By HERBERT MCKAY.

THERE has been a great extension of science teaching in recent years and a great improvement in teaching methods. It is now generally recognized that every school should have a laboratory, where pupils can experiment for themselves. Teachers and school authorities are faced with the problem of providing these laboratories. Does this mean the erection of a special building, the provision of elaborate benches, and expensive apparatus? If so, the idea will have to be abandoned by practically all elementary schools and a great number of secondary schools, especially those privately conducted.

A laboratory is simply a place where individual pupils can carry out experiments, and the less there is to distract attention from the matter in hand the better. The idea that elaborate furniture and apparatus is necessary has grown out of a confusion between laboratories used for teaching purposes and laboratories used for advanced research work. A little reflection will show that the requirements of the two are quite different.

*For teaching purposes an elaborate laboratory is not merely unnecessary—it may be a hindrance to good work.*

Any classroom may be turned into a simple laboratory, but it is well to choose one which is well lighted and well ventilated. Certainly no pupil should be allowed to perform experiments in a dark corner. The benches should be arranged so that they are all well lighted.

A laboratory may be arranged to accommodate twenty-five pupils, but twenty, or even a less number, is more satisfactory. The simplest form of bench is a flat table. For pupils from twelve to sixteen years of age the tables should be 2 ft. 8 in. high. This height allows pupils to work with comfort. Wide tables, with pupils working at both sides, are more economical of space than narrower tables with pupils at one side only, but the latter have the advantage that all the pupils face the teacher. The size of the classroom and the number of pupils to be accommodated will decide which form of table is to be used.

Pupils usually work in pairs, and at least three feet should be allowed for each pair. Three narrow tables, each 12 ft. long, will provide places for twenty-four pupils. These tables should be 2 ft. 6 in. wide, and they should be placed 3 ft. from each other, to allow room for the teacher to pass without disturbing pupils at work. It will be seen that the tables occupy a floor space of 12 ft. by 13 ft. 6 in. To the latter length must be added space for the pupils working at the table at the back. The 12 ft. length cannot with any comfort be reduced, but 15 in. might be saved in the other length by reducing each of the widths by 3 in.

Twenty-four pupils might also be accommodated at two wide tables, each 9 ft. long and at least 4 ft. wide. The space between these tables should be not much less than 5 ft., to allow the teacher to pass between two rows of pupils. These two tables occupy a floor space 9 ft. by 13 ft., but to the latter dimension must be added space for the pupils at the front and at the back.

Notice also that a single-width table 12 ft. long would accommodate sixteen pupils.

The tables should be solidly constructed, so that they are quite firm. The tops may be of deal, and they should be rubbed occasionally with oil or melted paraffin.

About an inch in from the edge of the table, and running right round, a semi-circular groove should be made to catch spilt mercury and other liquids.

A rail should run across each table, about 3 ft. above it and 15 in. in. On wide tables there should be two rails. Half-inch iron bars, supported by wooden standards, are convenient—there may be four standards for each rail. These rails are to hang pulleys and other apparatus on.

A chair or a stool should be provided for each pupil.

A supply of gas is necessary. A pipe may be run under each table. Where wide tables are used there may be a two-way connexion for each four pupils—two pupils at each side of the table. In a 12 ft. table there would be four such connexions, or these may be reduced to two four-way connexions, one at a quarter of the length from each end of the table. For narrow tables two two-way connexions are suitable.

There should also be a supply of water. Sinks and water taps may be placed at the ends of the tables, or if more convenient they may be placed in corners of the room. In any case two are enough, and they should be easily accessible.

Balances and scales may be placed on a narrow bench along one of the walls. This bench should be solidly constructed, like the tables. At least two balances are desirable, and a pair of scales for large rough weighings. The balances might be placed at the ends of the working benches.

At the end of the laboratory, and parallel with the working benches, a demonstration table may be placed. This may be 3 ft. high, at least 6 ft. long, and 2 ft. 6 in. wide. There should be a supply of gas and water. Behind the demonstration table a large blackboard may be fixed.

Cupboards should be provided for storing notebooks and apparatus. The cupboards for the apparatus should be glazed.

A draught chamber is not necessary, but it is a useful adjunct to a laboratory. The chamber itself is easily constructed. It may be 2 ft. wide by 1 ft. 6 in. deep and 2 ft. 6 in. high. The front should be a glass frame which can be raised or lowered. If it is counter-balanced like a window frame it will be easier to move, but this is not necessary. The top should slope up in every direction toward the outlet.

The outlet may be a galvanized iron pipe carried up to a chimney or to the top of the building. At a convenient spot in the pipe a gas connexion should be fitted. A gas jet is to be lighted when the draught chamber is in use, so that obnoxious fumes may be carried off.

It has not been said whether the simple laboratory described is to be used as a chemical or a physical laboratory, because no distinction is necessary at this stage. Elementary experiments can be carried out equally well whether they are chemical or physical.

The supply of apparatus provides another problem, but one that is not difficult to solve. The apparatus may be as simple as the laboratory. There are great educational advantages in simplicity. Attention is

not distracted from the essential points in the experiments themselves. Making apparatus encourages the habit of self-reliance and helps to make pupils ingenious.

Certain things must be provided. Each two pupils should have a Bunsen burner, with rubber tubing to connect it to the gas supply, a tripod stand, and wire gauze, a retort stand with three rings and a clamp, a supply of  $\frac{3}{4}$  in. and  $\frac{1}{2}$  in. test tubes, several 4 oz. and 8 oz. flasks, several gas jars, a supply of glass tubing in 2 ft. lengths from 3-16 to  $\frac{1}{4}$  in., rubber corks with two holes to fit the flasks, a supply of corks, two bar magnets and a small pivoted test magnet, a funnel, a blowpipe, and a trough.

In addition there should be thermometers reading well above 100° C., some barometer tubes, several lamp chimneys, slips of mirror 1 in. by 3 in., convex and plano-convex lenses of about 4 in. and 10 in. focal length, rectangular blocks of glass, triangular prisms, and rods of glass, vulcanite, and sealing wax.

The general stock should contain a supply of hydrochloric, sulphuric, and nitric acids, with small bottles for use by pupils. There should also be supplies of fine sand, salt, saltpetre, potassium chlorate, manganese dioxide, calcium chloride, sulphur, phosphorus, magnesium ribbon, granulated zinc, copper wire and copper turnings, iron filings, liquid ammonia, litmus, charcoal, and marble chips.

Other things may be added, but the above lists contain practically all that is required for an elementary course in chemistry and physics.

It may be noticed that many things are omitted from the lists of apparatus which are usually included. The omissions are intentional, because most apparatus serves its purpose better if made by the pupil. Much apparatus may be made in the classroom or the laboratory or in the woodwork class.

Small jars serve the same purposes as more expensive beakers. Substances may be heated or burnt on tin lids. A graduated jar may be made by pasting a strip of paper on a gas jar, pouring into the jar weighed amounts of water, and marking the surface-level each time. Graduating the jar is a useful exercise in itself. These are given as examples of what may be done. It is a fact that most of the expensive apparatus often provided can be imitated successfully at little or no cost, or can be replaced by inexpensive apparatus.

\* \* \* \* \*

One other point may be noted. Experiments with light are so attractive that a dark room should be arranged if possible. The room may be quite small, it should have a south window, and it should be used on bright sunny days. The room may be darkened by pinning over the windows sheets formed by pasting one sheet of brown paper over another. In a convenient spot a small circular hole should be cut to admit a beam of sunlight. This beam may be reflected, refracted, analysed by a prism, brought to a focus, and projected on a screen. The room may also be used as a photometric room.

*The Magic Horseshair.* By James A. Wightman.  
(2s. 6d. net. Fisher Unwin.)

The story is good, concerning, as it does, the adventures of Paddy Dolan and a kindly leprechaun. The drawings are deplorable, and ought not to appear in a book intended for children.

## SOME FOREIGN MASTERS.

By W. C. B.

It is, or it used to be, an established custom to speak disparagingly—even derisively—of the foreigner who undertakes to teach his own language in English schools. The foreign master in a school story, such as "Vice Versa," is apt to be taken as a representative of his class; we regard him as a type, and justify our opinion by our experience.

Yet perhaps we pride ourselves too much on the vividness of our recollections and impute our failure to learn French and German to the inefficiency of our teachers, when the blame rests largely on ourselves. If we recall what we were in our schooldays, we shall perhaps begin to suspect that our manners may have had something to do with our slow progress. Past generations of public-school boys regarded the foreign master chiefly as a butt for ridicule, and treated him as if he were entitled only to a minimum of respect.

It may be that in describing our school experiences we have often given snapshots of our instructors and have passed them off as portraits, in perfect good faith, but with an unintentional disregard for facts. Recollection easily brings up deficiencies; and reflection is needed to discover merits. There were merits more numerous and more splendid than at the time we were able to discern.

We condemn the ways in which we were taught, the ways which seemed to keep us from being on speaking terms with French and German—the old method of unlimited grammar and little else. Children of the present generation, we are led to believe, learn to speak these languages as soon as they begin to study them. The "direct" method is the vogue to-day, and this is guaranteed to mean "directly." The old method was slow, perhaps stodgy. But was it really stupid, and did it, as we hear so often, prove an utter failure?

I speak from later experience as well as from earlier recollection. I was taught in the old-fashioned way, and certainly, while I was at school, I was not taught to speak the languages I studied. But some years afterwards I discovered I had learnt more than I had realized. When I began to travel on the Continent, I found that the silliest falsehood ever uttered was the well known saying, "English will carry you anywhere." It wouldn't, because it was as unknown as Chinese. I had to fall back upon the French and German that my much-despised masters had taught me—and it came back and came out. Thanks to their now obsolete methods I had received a thorough grounding in grammar and syntax, and, by applying confidence and common sense to these, I was able wherever I went to make myself understood and even to carry on lengthy conversations. My masters were not so hopelessly inefficient, after all. Their teaching, because it was solid, survived.

Of those masters I wish to speak with gratitude and respect. They deserve more commendation than they ever received in their working days.

One of these masters was in his day eminent even among the writers of French grammars by his work in adapting famous French school books for the needs of English pupils. They were the books of the time, and if they have been superseded they have

only suffered the fate of many other inventions that have marked an era in the history of human thought.

This master was certainly not the typical Frenchman of a school story. There was a commanding air about him which ensured at least outward respect. His tall figure and his dignified deportment suggested Mr. Turveydrop, but there the likeness ceased; the admirer and admired of the Prince Regent assumed airs to which he had no inherent right, the French master displayed graces that were the natural expression of a graceful character. If we sometimes succeeded in deluding him by our cunning, we never attempted to defy his authority; we never dreamt of taking liberties with him. He was full of good humour, and delighted in telling us amusing stories; there was a certain degree of solemnity in his way of telling them which increased our gaiety. But he never failed to make us feel that he was essentially serious, and that in our dealings with him it was not safe to overstep the mark. He was perhaps rather too lenient, and we should have made more progress if he had made greater demands upon us, but we were conscious of a reserve of righteous wrath ready to be poured forth if occasion required. His intellectual gifts were of a high order, and his mind was a storehouse of learning. He was a Hebrew scholar, and was well read in "The Ancient Fathers," whose opinions he always cited when giving us a weekly Scripture lesson. He did not confine his activities to his classroom, but, in addition to a conscientious carrying out of the duties of his post, he threw his energies into many departments of school life, and for a long period was President of the Rowing Club. His great desire was to die in harness; he could never have resigned himself to resignation. His wish was granted, and his death, after a short illness, deprived the school of one who loved it and lived for it. His colleagues lost a loyal friend and a wise counsellor.

A superficial view of his successor would be at once unjust and untrue. He was perhaps more fitted to write books for others to use in teaching French than for the teaching of French himself. Of his books there can be only one opinion: they must, if used according to his directions, infallibly result in a sound knowledge of French and produce in the pupils a real interest in the study of that language. As it was, his coming marked the beginning of a new era, and for a time at least more interest was taken and more progress made than had been known for years. This is no disparagement of his predecessor, though the new master was certainly the better teacher of the two, but it merely illustrates the fact that a change of instructors sometimes produces fresh interest in the instructed.

The great feature in this master was his thoroughness. He was systematic, without being a slave to a system. His industry was unwearied, though much of his work must have been wearisome. I shall always associate him with piles of exercises, each carefully and neatly corrected. It was impossible for him to do anything in a slipshod manner; his solid work was the natural outcome of his solid worth. If only we had caught his spirit and had responded to his ceaseless efforts, we should have learnt both to read French intelligently and to speak it correctly and fluently. But for the most part we failed to respond, and we cannot blame our teacher

if he did not produce in us a knowledge that we declined to acquire.

If this master was deficient in discipline it arose from the whole nature of the man, and was almost a virtue. He had a mind far above the idea of punishment, and he tried to act as if his pupils were above the need of it. Punishment seemed to distress and disgust him. His ideal was

By winning words to conquer willing hearts,  
And make persuasion do the work of fear.

But most of his pupils needed more than the words of remonstrance, which as a rule were all that met even the most outrageous conduct. Neither their indolence nor insolence could betray him into temper or unseemly language, or make him relax his efforts or lessen his interest in their welfare. He had a forgiving nature and quickly forgot any action—or inaction—once he had said or done whatever he thought it required. And to those pupils who took an interest in their work he was always ready to give every help in his power. If it must, in justice to him, be said “of whom his pupils (for the most part) were not worthy,” it is doubtless true that many of them—perhaps even some of the most graceless—realize now after many years that, in despite of themselves, so thorough was the teaching, they learnt even when they were refusing to be taught.

Of my two German masters I can only say that the one point of resemblance between them was that both their names began with the same letter. In all other respects (including the respect with which we treated them) they were entirely unlike. The second one needs only a passing allusion; he came to us with a great reputation, but he had the misfortune to succeed a master who had established himself in our hearts. He took his predecessor's place, but he could not fill it. Herr — imperiously demanded that we should speak German; Dr. —, without making any such demand, made it possible for us to do it in the future by giving us a solid and scientific foundation in the present. I can speak of him only with admiration and affection. He was conspicuous as he walked through the school for his vigorous stride, and this stride was the sign and expression of a correspondingly vigorous mind. His energy was amazing, for by working by night as well as by day he contrived to teach at two great public schools. He came to us at night, but we never suffered through having him after he had been teaching elsewhere during the day. He was always as fresh and alert as if his day's work were only beginning. He spared neither pains nor brains in teaching us, and thoroughness was the mark of all he did. He was convinced that no language could be learnt without beginning by a systematic study of the grammar, and he acted throughout on this conviction. But he was no “dry-as-dust” professor; he made everything interesting and spiced his teaching with fun; he also had a power of explaining which helped us over many a difficulty. If he had a defect it was that his kindly nature led him to give us more help than was good for us. Perhaps he was happy in dying before the Great War, before even there were signs or thoughts of it, for he loved our nation and gave the best years of his life to serving it well. The remembrance of such men as Dr. — may make us hope that the more bitter remembrances of the War may some day pass away.

## CAN THESE BONES LIVE?

By DAVID SOMERVELL.

### III.

#### SCHOOLMASTERS.

LAST month I undertook that the present article should be devoted to the teaching of English Literature, but since then I have been reading “Joan and Peter” in a borrowed copy, and before I part with the book I should like to say my say—or a fraction of it—upon the problem that troubles the book from cover to cover, and is finally left unsolved. The nature of the problem is precisely indicated by my title and sub-title.

Every schoolmaster should read “Joan and Peter”: we may pray for an early cheap edition as a national benefit. Mr. Wells has nothing really new to say about education, but he says the old things so well and so comprehensively as to renew them in our minds. Mr. Wells is a great writer, because he presents better than any one else the reasonable discontents of the ordinary intelligent public.

As the reader probably knows, Joan and Peter are two orphans who come into the charge of one Oswald Sydenham. Oswald is an excellent man—he is, in fact, our old friend Mr. Wells disguised as a V.C.—whose career of pioneering in Central Africa is cut short in the nineties by tropical fever. Wealthy and well connected, he comes home with no obvious future in life beyond the care of his wards. All his frustrated energies go into the discharge of this task. He becomes an educational fanatic.

So the quest for a live schoolmaster begins. What is a live schoolmaster? One who, having figured out for himself the type of *élite* required to govern and guide the English people and the British Empire so that they play a part worthy of their immense responsibilities in the modern world, proceeds to devise and execute an educational system that will produce such an *élite*.

The quest ends in failure. Oswald learns much by the way, of course. Chiefly, he learns how terribly the best-intentioned schoolmasters are conditioned by the circumstances of the society they are trying to improve upon. After a straight talk with Mr. MacKinder, the best specimen of the profession he met, “Oswald realized for the first time the eternal tragedy of the teacher—that sower of unseen harvests, that reaper of thistles and wind, that serf of custom, that subjugated rebel, that feeble, persistent antagonist of the triumphant things that rule him.” Later, he virtually despairs: “Perhaps the problem of making the teacher of youth an inspiring figure is an insoluble one. . . . They seemed to be for the most part little-spirited, gossiping men. They had also an effect of being underpaid; they had been caught early by the machinery of prize and scholarship, bred ‘in the menagerie’; they were men who knew nothing of the world outside, nothing of effort and adventure.”

Now there is one curious point about all this which supplies the clue to the whole business. Mr. Wells may see the point, but if he does it is part of his humour to refuse to stress it, and leave to one reader in ten the satisfaction of finding it out for himself. As such a method would not be in character with Mr. Wells as I conceive him, I prefer to suppose that he more or less missed the point himself.

When Oswald's African career had been concluded, he was very much at a loose end, and volubly complained of the fact; indeed, it is difficult to conceive how so strenuously active-minded a man passed his time when Joan and Peter were away at school. He is an educational fanatic. *Why on earth did he not become a schoolmaster?* Of course, he lacked the formal academic qualifications, but, even so, any school would have jumped at him—an aristocrat, a V.C., a man of wide reading and general acquirements. Or he could have started a school of his own. Seemingly the idea never entered his head. Again, when at the end of the book he relinquishes his guardianship, and charts for Joan and Peter their final sailing directions, it never occurs to him to suggest that they would find their highest usefulness in the profession whose lack of men of character and talent he has diagnosed as the fundamental weakness of the world. Or, take Mr. Mackinder: he only resolved to be a schoolmaster when he realized that "his slender and delicate physique debarred him from most active occupations."

There is one character in the book, indeed, who would from the highest motives have become a schoolmaster had he not been killed in the War—Wilmington, a good fellow, though humourless and unmagnetic. He writes: "Man is a sedentary animal, and the schoolmaster exists to prevent his sitting down comfortably. This human weakness for just living can only be corrected in the schools. When the War is over I shall try to be a schoolmaster. I shall hate it most of the time."

There you have the whole situation in a nutshell: the live people won't become schoolmasters because, quite apart from financial considerations, they feel it is hopeless; the dead majority will smother them. They observe the tragedies of the isolated Mackinders, and pass by on the other side. But the only hope is that the live people should come into the profession in sufficient numbers to shift the balance of power. That does not need an arithmetical majority. One live man cannot beat a hundred dead ones, but ten or fifteen live men could. All revolutions have been made by resolute minorities.

Then there is the other motive that deters all but a few Wilmingtons: "I should hate it most of the time." That is an optical illusion. The people who hate it are just the people who ought not to be there, people who have drifted into the profession and stuck there, because it is easier to get in than to get out.

I was told the other day that a head master of an important school had described "Joan and Peter" as a "perfectly disgusting book." He well might.

THE Incorporated London Academy of Music proposes an interesting innovation by offering to conduct Inspection Examinations in place of the usual Syllabus Examination. In these new examinations the subject will not be prescribed by the Academy, but will be submitted by the schools. The Academy will not undertake to examine schools which offer an unsuitable syllabus. The syllabus must be sent in at least three weeks before the date proposed for the examination, names of pieces to be played and songs to be sung being given, together with details of work in theory. Credit will also be given for pieces studied independently by the pupil. If the syllabus is approved the Council of the Academy will send a representative to examine the pupils; or the examination may be held at the Academy, or at one of its Branches. Certificates will be awarded to individuals who pass the examination, and where classes are examined a report will be given.

## CHRONICLE OF EDUCATION.

- 18-25 April.—Annual Conference of the National Union of Teachers at Cheltenham. President, Mr. W. P. Folland; Vice-President, Miss J. F. Wood.
- 26 April.—Meeting of the Irish National Teachers' Congress at University College, Dublin (Mr. J. T. Nunan, President). Defeat of proposal to demand equal rates of pay for "untrained" and "trained" teachers.
- 28 April.—Meeting of Associated Mistresses of Horticultural Colleges and Schools at Swanley.
- 28 April.—Opening of term at Oxford. Great increase in the number of undergraduates, including 150 American students, who will be resident for the summer term.
- 30 April.—Conference at the Central Hall, Westminster, on "The Neglect of Science." Addresses by Lord Leverhulme, Sir Philip Magnus, and Dr. H. B. Gray.
- 1 May.—Announcement of Treasury approval of new regulations for Clerkships (Class 1) in the Home Civil Service. Sixty-five subjects may be chosen from, instead of thirty-eight, as formerly.
- 1 May.—Address by the President of the Board of Education at a meeting of the Sunday School Union. Mr. Fisher urged that Sunday-school teachers should influence their pupils in favour of choosing a teacher's career.
- 3 May.—Conference of the London Teachers' Association (President, Mr. A. Tasker). Resolutions carried in favour of "equal pay" and demanding a minimum salary of £200 a year for all certificated teachers in the London service.

### Ex-Service Students and the Universities. Scheme of Government Assistance.

That part of the Government scheme of financial assistance for the education and training of ex-Service men which relates to higher education at public educational institutions in England and Wales is being administered by the Board of Education. Grants can be made by the Board to assist properly qualified students to take (amongst others) full-time University degree or diploma courses, some post-graduate courses, full-time refresher courses, and courses of higher commercial or technical education at polytechnics or technical institutes. An intending applicant should, in the first place, communicate with the Head of the educational institution at which he wishes to take his course, from whom he may receive a form of application (O.13). If he needs advice as to the best institution for him to approach, he should consult the Chief Education Officer of the Local Education Authority of the area in which he resides. If he has any difficulty in finding an institution which has accommodation available for him, he should communicate with the Service Students Bureau, Board of Education, Whitehall, London, S.W.1. Applicants who desire to attend Universities in the British oversea dominions should communicate with the Secretary, Imperial Education Committee (W.O., S.D.8), Adastral House, Victoria Embankment.

### *Relations between China and Japan during the last Twenty-five Years.* (Allen & Unwin.)

This indictment of Japanese policy in China is an effective presentment of the case from a Chinese point of view. It ignores, however, the weakness of Chinese administration, and the resulting disorder which has continually invited, and sometimes necessitated, foreign intervention. The pamphlet does not, therefore, supply the material for an impartial verdict.

## PERSONAL NOTES.

**Sir John Pentland Mahaffy.**  
**By a Member of Trinity College, Dublin.**

By the death of Sir John Pentland Mahaffy, Trinity College, Dublin, has lost a great Provost, and the world a picturesque and attractive personality, who was one of the most versatile and richly gifted of the men of our time.

Mahaffy, both physically and intellectually, was cast in a large mould, and his genius and character presented so many aspects that it is difficult even to attempt to appraise them. His mind was vigorous and active, uniting originality and intellectual boldness with a remarkable faculty for rapidly assimilating knowledge. He had a faculty of intuition that carried him direct to the pith and marrow of the most intricate problems of scholarship. He was thrifty of time and his industry was untiring. He was a pioneer in many branches of learning, in any one of which his achievement would have been sufficient to win a lesser man a European reputation, and outside of the restricted field of scholarship his attainments and accomplishments were of extraordinary range and amplitude. He had inexhaustible vitality, which found an outlet in innumerable contacts with the life of his time. He filled many rôles, and all with distinction.

In his published work, comprising some thirty volumes, Mahaffy ranged eagerly and confidently through ancient and modern history, philosophy, literature and art, or trifled with such lighter themes as the decay of modern preaching and the art of conversation. Of his occasional contributions to journalism, the most memorable are perhaps the graceful tributes to the memory of distinguished colleagues which appeared from time to time in the *Athenaeum*.

Style, in the purist's sense of the word, Mahaffy did not possess, but he possessed it almost to excess in the spirit of Buffon's definition—"le style c'est l'homme." All he wrote bore the stamp of his robust individuality, and, in spite of his indifference to style in the narrower sense, he had in high degree the gift of vivid historical portraiture and of so visualizing the past that it becomes as real to us, and as full of warmth and colour and movement, as the life we live and see around us.

Mahaffy's individuality deserted him only in the pulpit, and he himself was modest in his estimate of his powers in the classroom. His lectures were pitched in a conversational key and, indeed, resembled nothing so much as the even conversation of a travelled and cultivated man of the world. They were entertaining and often piquant. His prelections were of little service for examination purposes, but Mahaffy would never have consented to spoon-feed his students. His *métier* was to stimulate, to advise, and direct. He was quick to recognize evidence of independent thought or original investigation in the work of an undergraduate.

Mahaffy's conversation had the charm to be expected of a robust and imposing, but intensely human, personality of great vigour of intellect and immense learning. It suggested omniscience, but was without a trace of pedantry. It took, indeed, a subtle flavouring from a spice of whimsy, if not eccentricity, in the man, an effect accentuated by a slight lisp that suggested, but was not, a mannerism. He was an excellent raconteur, and his reputation as a wit rivalled in the nineties that of the famous Father Healy. His *nois* had always point, and were often pregnant with witty implication. His more caustic sallies were repeated in Dublin with *schadenfreude*. Many must have winced under the strokes of his irony, yet he probably never said a spiteful or ill-natured thing. His nature was essentially large, and his judgments of men were often generous and never tainted by jealousy or littleness.

In spite of the magnitude of his researches and of the multiplicity of his activities inside and outside the College, Mahaffy indulged to the full the lighter interests and the graces of life and seemed to enjoy unlimited leisure. He was at all times accessible, and hardly gave the impression of being a busy man.

Mahaffy was an ideal head of the College and, which is not the same thing, a great Provost. He had all the qualities of an ideal head, as scholarship and the prestige of scholarship, administrative ability, the *savoir faire* of the experienced man of the world and social gifts. But he was a great Provost, as the phrase goes in Ireland—as it is applied, for instance, to Mahaffy's predecessor, Dr. Salmon—because, over and above academic or social qualifications, he had the qualities of a statesman, and was indeed in his own way a great patriot statesman in all that pertained to the relations of Trinity College with the larger aspects of the Irish problem.

Essentially Irish in his intellectual endowment and in temperament, Mahaffy was Irish also in his critical detachment from party. As a confessed aristocrat, he was openly contemptuous of democracy, and as a cosmopolitan he was impatient of the provincial note in Irish nationalism. He was wantonly provocative in his attitude to popular causes, and never tired of deerring the cultural pretensions of Celtic Ireland or of denying on historical evidences the very existence of a distinctive Irish nation. Yet Mahaffy, at the Irish Convention, which held its sittings in the Regent's house in Trinity College, voted for Irish self-government and himself advocated a confederation of provinces on the model of the Swiss Confederacy. And, when the Home Rule Bill was under consideration and the University of Dublin was being offered special and privileged treatment, Mahaffy "rejected as sacrilege every suggestion that Trinity College, in some vain hope of security or profit, should separate itself from the heart of the whole of Ireland."

So, temperamentally conservative and devoted to the traditions and ideals of Trinity College, Mahaffy was an ardent supporter of reform, and in his brief provostship did much to broaden and liberalize the government of the College and to develop it as a centre of humanistic culture. Mahaffy's love of Trinity was a passion. He has told its history in "The Book of Trinity College," "The Particular Book of Trinity College," and "An Epoch in Irish History." His last publication was a valuable monograph on the College plate, and a history of the College buildings engaged the last months of his long and full and fruitful life.

**Mr. P. A. Barnett.**

It is rumoured that Mr. Barnett is to succeed Sir William H. Hadow at Adastral House as the Director of British Army Education at home and abroad. Mr. Barnett's name is mentioned also in connexion with another body, to whom a task of even greater complexity and difficulty is to be assigned.

**Prof. Frederick Soddy.**

The newly established Second Chair of Chemistry at Oxford will have for its first occupant Prof. Soddy, now Professor of Chemistry at Aberdeen. With Sir Ernest Rutherford, now of the Cavendish Laboratory, Cambridge, he conducted some of early researches into the phenomena of radioactivity.

**Mr. A. E. Zimmern.**

The Wilson Chair of International Politics at Aberystwyth, recently founded by Major David Wilson and his sisters as a war memorial, is to be filled by Mr. A. E. Zimmern, the well-known scholar and writer.

**Sir Richard Arman Gregory.**

We offer congratulations to Prof. Gregory on the honour of knighthood. It is rumoured that this has been conferred in recognition of his services in connexion with the War, and particularly as Chairman of the British Scientific Products Exhibition. This is ample justification, doubtless, but we should have preferred to award it for his valuable book, "Discovery, or the Spirit and Service of Science."

## EDUCATION ABROAD.

### America—a Central Department.

During the past few years there has been a growing body of opinion among educationists in the United States in favour of a Central Department or Ministry of Education. The plan was strongly supported at the Conference of the National Education Association, held at Pittsburg in 1918, when Prof. Strayer, of Columbia University, gave an important address outlining the proposals. It is now announced that the reconstruction programme for the next Congress includes a measure for establishing a Federal Department of Education under a Cabinet Minister. The Bill will provide also for an appropriation of twenty millions of pounds for educational work, with a hundred thousand for administration. This proposed development is highly important as marking the beginning of an effort to provide a national system of education in the United States. Hitherto each State has been autonomous, and the traditional attitude of the separate States towards any attempt to place them under one federal law has always made it impossible to speak in any general terms of the system of education. Each State has its own system, and some have a very inadequate one, especially in regard to compulsory attendance and the proper limitation of child labour. The proposed federal scheme, if carried, will set up a national minimum.

### The New Hungary and Education.

The Berne correspondent of the *Times* reports that the schools in Budapest opened on April 11, and that the Soviet Government is preparing a revised scheme of education "in accordance with the new spirit and aspirations of the world proletariat." Apparently this grandiloquent phrase means that the teachers are to begin by explaining the ordinances of the new Government. This task accomplished, they are to teach history and citizenship according to the doctrines of Karl Marx, avoiding "the capitalist doctrines of social economics." Ethics will take the place of religious instruction. The teaching of jurisprudence to advanced students will be abolished, on the ground that the system of laws under the Communists is wholly different from that of the capitalists.

### English Studies in Italy.

An interesting pamphlet has been written by Dr. Ernesto Grillo, of the Department of Italian Studies, University of Glasgow, and published by the *Unione Italiana*, Sauciehall Street, Glasgow. It is intended to show what is being done to promote the study of English in Italy, and contains particulars supplied by the Ministries of Education and Industry, Commerce, and Labour, who said, in the letter accompanying the information: "We are most anxious to see the teaching of Italian adopted in Britain in the same manner in which the teaching of English has been largely adopted in Italy." Dr. Grillo tells us that the study of English has never been so popular in Italy as now. Lately a young Italian, noticing in the Via Tornabuoni at Florence that nearly all the shops displayed the sign "English spoken," mischievously placed over a barber's shop the legend "Italian spoken here." In every national education institute English departments have now been organized wherein English is efficiently—and often compulsorily—taught, both in day and evening classes. Teachers of English enjoy the same privileges as other teachers.

### *Law Reform in China.* (Allen & Unwin.)

A good summary of what has been attempted in the way of altering Chinese laws in recent years. Unfortunately, the author omits any indication of the extent to which the new legislation is actually in force.

## SCHOOLS, COLLEGES, AND UNIVERSITIES.

### Christ's Hospital—New Head Master.

At a special meeting of the Council of Almoners of Christ's Hospital, Mr. William Hamilton Fyfe, M.A., Fellow, Tutor, and Principal of the Postmasters, Merton College, Oxford, was elected Head Master of the boys' school at Horsbarn, in succession to the Rev. Dr. Upecott, who has resigned. Mr. Fyfe, who is forty years of age, has held a commission in the Army since January 1915, and has now the rank of major in charge of an office at Oxford concerned with the civil training and resettlement of ex-officers. He was educated at Fettes College, Edinburgh, and Merton, and took a First Class in Honour Moderations and in Literae Humaniores. For two years he was a master at Radley before returning to Merton as Fellow, Tutor, and Principal of the Postmasters.

### Cambridge—New Chair of Engineering.

Associated with the Bertram and Cecil Hopkinson Memorial Trust Fund, Mrs. John Hopkinson offers £2,000 towards the endowment of another Chair connected with the School of Engineering, in order to carry on the work so brilliantly developed by her son, Colonel Hopkinson, Professor of Mechanism, who lost his life whilst flying last August. The professorship will be called the Hopkinson Chair of Thermodynamics. Other sums offered are £1,000 by Mr. George A. Wills, £500 by Mr. Neville Wills, and £250 by Mr. Stanley Wills.

### Eton War Memorial—A Suggestion.

It is reported in the press that Eton has a memorial fund of £150,000, collected and promised. The object originally proposed was to help Old Etonians, especially in sending their sons to Eton. The fund will be more than enough for this purpose, and the interesting suggestion is made that an entirely new school shall be founded, where the sons of N.C.O.'s and men who fell in the War shall be taught on public-school lines, in an institution modelled on Eton and designed to foster corporate life, public spirit, and school patriotism.

### King's College, London.

An effort is being made to raise funds for establishing and endowing a Chair of Ecclesiastical Music at King's College. It is proposed to collect £12,000 and to pay a professor at least £600 a year. The Treasurer of the Fund is Viscount Hambleden, 3 Grosvenor Place, London, S.W.1.

### Gresham's School, Holt.

Mr. J. R. Eccles, Second Master of the School, has been promoted to the position of Head Master, in succession to the late Mr. G. W. S. Howson.

### Generous Gift to Cambridge.

It is announced that various companies interested in petroleum and its products have combined to give £210,000 to Cambridge University for the purpose of developing the Department of Chemistry. With this large sum the University should be able to assume a leading position among the scientific schools of Europe.

## BLUE BOOK SUMMARY.

### Draft Provisional Code.

In a pamphlet dated April 16, 1919, the Board have issued a Draft Provisional Code of Regulations for Public Elementary Schools. This is the first time since 1912 that the code has been reprinted as a whole, the necessary amendments having been made in the form of minutes issued separately at different dates. Substantial alterations are now needed in order to bring the sections which deal with grants into line with the financial clauses of the Education Act and with the Regulations for the Substantive Grant for Elementary Education.

Accordingly the whole Code has been reprinted, the various minutes still in force have been incorporated, and the Articles dealing with grants have been revised. In connexion with the Substantive Grant, henceforth the only grant payable in respect of elementary education, two additional conditions have been included. The first refers to the performance of the Local Education Authority's duties under the Education Acts, and the second repeats the conditions under which the Supplementary Grant was payable in 1917-18 and 1918-19.

The Substantive Grant is a single consolidated grant, payable annually to Local Education Authorities in respect of elementary education in their area. The grant is conditional upon the Board being satisfied that the Authority have performed their duties under the Education Acts, and have complied with the regulations, including the supply of information and as required by the Board. The Board will also consider the provision made by the Authority for Elementary Education in view of local needs and circumstances, and also in relation to the development of a satisfactory national system, including the establishment of the teaching service of the country on a sound basis. Such matters as central schools, practical instruction, and the prescribed minimum salary for teachers are mentioned.

### Grant Regulations.

In a White Paper (Cmd. 129) the Board's rules for the payment of grant are set forth. The grant, save in the special case of a highly rated area, will not exceed two-thirds of the net expenditure nor be less than one-half. The formula for reckoning the grant is: Thirty-six shillings for each unit of average attendance in public elementary schools maintained by the Authority (not including "special" schools) with the following additions:—Three-fifths of the Authority's expenditure on the salaries of teachers in the schools concerned, one-half of the net expenditure on special services, and one-fifth of the remaining net expenditure on elementary education; less the product of a sevenpenny rate upon assessable value in the area.

### A New Syllabus in Hygiene.

The Board have issued a revised Syllabus in Hygiene for Training Colleges. It falls into eight sections: Conditions of Health in Childhood, the Senses and their Training, the Practice of Hygiene, Common Ailments of Children, Special Groups of Children, Welfare of Infants, the School Medical Service, the School Building and Surroundings. The course thus outlined is very comprehensive, and the matters in the detailed syllabus will demand prolonged and careful study. To mention only two points: the students are to know the statutory powers and duties relating to abnormal children and also to the work of the school medical service. These are in addition to a knowledge of early signs and symptoms of ill-health in children, of principles and methods of sanitation, physical training, school planning and equipment, and many other topics, not forgetting, of course, the composition of air and the relative values of different foods.

## ASSOCIATION NEWS.

### The Teachers Council.

The total number of applications received up to and including Monday, May 12, is 27,147. Of these, about one-half are from teachers in public elementary schools. The Council has under consideration the position of teachers in recognized schools who are outside the scope of the present Superannuation scheme. It is also taking steps to draw up a list of examinations which will be accepted as a qualification for admission to the Register. The Council has been invited to appoint a representative on the Board of Electors for the post of Director of the Training of Teachers in the University of Oxford.

The Chairman of the Council, Dr. Michael Sadler, has now returned from India, and will attend the meetings in May.

### The College of Preceptors.

At the meeting of the Council, on May 10, officers for the ensuing year were appointed as follows:—President, Sir Philip Magnus; Vice-Presidents, Prof. John Adams, Mr. R. F. Charles, Mr. J. F. P. Rawlinson; Dean, Mr. W. G. Rushbrooke; Treasurer, Dr. G. Armitage-Smith. Mr. A. Millar-Inglis was appointed the representative of the College on the Joint Pensions Committee. Eight new members were elected, and the diploma of Associate was granted to Mr. J. Lloyd, Mr. J. M. S. Pobe, Mr. H. Spurr, and Mr. E. C. Wright. The Council approved the recommendations of the Examination Committee for the modification of the Diploma Examination Regulations for 1920, requested the Future Policy Committee to frame a scheme for the training of teachers of commercial subjects, and authorized the House Committee to arrange for a series of evening meetings of members during the coming winter session.

### The Selborne Society.

Interesting rambles are announced in the new programme of the Society's Ramble Section (Avenue Chambers, W.C.1). "Great British Industries" is the title of a new series, and visits are being arranged to the studios of the Broadwest Films, where the actual production of a film play will be seen and explained. The Imperial College of Science and Technology, the Egyptology Section at University College, and a Surprise Ramble are in the syllabus, the guides including Sir Alfred Keogh, G.C.V.O., G.C.B., LL.D., and Prof. Flinders Petrie, D.C.L., F.R.S.

### British Science Guild.

The British Science Guild has issued an important memorandum, urging the formation of (1) a Departmental Committee to inquire into the provision for University and Higher Technical Education in this country; (2) a Consultative Committee, consisting mainly of representatives of industry, to advise the Board of Education on matters affecting the relationship of Science and Industry to Education.

In support of the former proposal, the Guild recalls the fact that last year it issued a Report on Industrial Research and the Supply of Trained Scientific Workers, showing that the number of full-time students of science of University standard here compared badly with that in Germany or America, as did also the State grants and incomes of our Universities. The Guild urges that a systematic national survey of educational provision and requirements is now necessary. The Guild is in favour of establishing Local Authorities for areas much greater than the existing county or county boroughs, and it suggests the formation of ten Provincial Councils.

The Consultative Committee is advocated on the ground that the existing Committee "consists mainly of representatives of elementary, secondary, and 'literary' education."

# SUPPLEMENT.

## THE ANNUAL CONFERENCE OF THE NATIONAL UNION OF TEACHERS.

By OUR SPECIAL CORRESPONDENT.

THE Cheltenham Conference of the National Union of Teachers was in several respects a remarkable gathering. It was the first great assembly of teachers since the signing of the Armistice, many of the men present had served in H.M. Forces for several years, and the spirit of revolt from pre-war conditions was rife amongst the delegates. If these facts are remembered there need be no surprise at some of the decisions arrived at. Unfortunately, however, these questionable decisions remain.

The delegates, nearly two thousand in number, were warmly welcomed by the Mayor, the Lord-Lieutenant of the County, the Bishop of Gloucester, Miss Faithfull, and other representatives of the district. It has sometimes been said of delegates to the Annual Conference of the N.U.T. that pleasure is their first object and business their second. No one can speak thus of delegates to the Cheltenham Conference. From the first session to the seventh the attendance was remarkable, and the interest taken in the proceedings has created a record. Gathered from every part of England and Wales and representative of the interests of almost every type of primary school, and in not a few cases of the municipal secondary schools also, this great annual gathering of teachers is an audience well worth addressing. So thought Mr. Fisher, who had announced his intention of speaking to the teachers, and so he still thinks, although he was at the last moment prevented from being present. In his letter to the Conference he writes of the "deprivation" he has suffered in not being able to fulfil his engagement and of his intention to seek some other opportunity of speaking his mind.

It is needless to do more than mention the intense disappointment experienced by every delegate when it became known that the Minister of Education could not attend, nor need I add how much this disappointment was shared by the large number of representatives of Local Education Authorities present. Of course, it is impossible to know what Mr. Fisher had in his mind to say to teachers, but remembering his enthusiasm for education and his great desire for a free course for the epoch-making Education Act of 1918, I shall not be far wrong if I imagine him as intending to pour oil on the waters of unrest in the world of teaching. He might, for instance, have counselled the teachers not to be too precipitous in the matter of strikes. Also, he might have advised the representatives of Local Education Authorities to recognize his great desire for the better payment of the men and women engaged in teaching. In any case, I am quite sure he would have done a great service to education.

### Important Decisions.

There were several important and far-reaching decisions arrived at. For instance, it was decided that, in all future scales of salaries, women shall be paid at the same rate as men—i.e. there shall be one scale, equally applicable to women and men. This decision was made as the result of a plebiscite of the

whole of the members of the Union, the voting being 35,004 in favour and 15,039 against. It is a pity so few recorded their votes. About 50 per cent. did not trouble themselves in the matter. It is difficult to understand their attitude considering the effect on the future of the profession involved in this important change of policy.

Another of the decisions is, frankly, astonishing. The Executive of the Union had tabled a resolution on the "Supply of Teachers," and included in it was a recommendation for establishing Whitley Committees. To this an amendment was moved asking that the teaching profession shall be placed "on a self-governing basis, with *full partnership in administration.*" The mover of this remarkable amendment quoted Prof. Adams as having said: "When we have prayed for those who are under the King and over us there is no one left to pray for except ourselves." No doubt Prof. Adams will be surprised that his words should have been used to bolster up a claim for "full partnership in administration." After a heated debate, during which the issue was described as "syndicalism or otherwise," the amendment was carried by a very large majority. I do not envy the Executive of the Union its task in endeavouring to secure the end in view. That teachers in conference should adopt a resolution which would, if acted on, cut away the very foundations of representative government, is a sufficiently serious sign of the times to be disconcerting. It is possible the members who voted thus did not appreciate the full significance of their vote. Indeed, I think this must be the case, for otherwise surely the Conference would not have adopted almost immediately afterwards a resolution urging Local Education Authorities to establish Whitley Committees! The Executive has, therefore, two mandates. It is free to choose which it will regard as binding, and can be trusted not to urge the impossible.

The third decision of far-reaching effect is that which now includes the uncertificated teacher as eligible for membership of the Union. Hitherto only those teachers who hold the certificate of the Board of Education or a higher qualification for ordinary teaching have been eligible for membership, but now all—excepting the supplementary teacher—may become members. From a professional standpoint this is a distinct set-back. The Board of Education must be chuckling at the success of its past action in respect of the uncertificated teacher. What, however, will the Registration Council say? At present the uncertificated teacher employed in a primary school is not eligible for registration. It is to be hoped the Council will not follow the N.U.T. by making him (and her) eligible. The argument which proved to be most convincing to the representatives was that the help of the uncertificated teacher was always needed where a "strike" was in progress. Surely teachers are not looking forward to a long series of "strikes"! Another argument which told was that the trade unions accept all engaged in the craft as members. Yes, but a does a skilled and qualified craftsman allow an unskilled man to do skilled work? The uncertifi-

cated teacher is employed on the same work as the certificated—a very serious difference.

### General.

Apart from the above decisions, many debates of real educational interest took place. Among these were the debates on nursery schools and the teaching of domestic subjects. The Conference decided that nursery schools should form an "integral part of the infant school" and that it should not be compulsory on pupils to teachers to give instruction in domestic subjects. The resolution asking for free secondary and University education was on sound lines. It is a hardy annual, and some day the goal of the Union in this direction may be achieved. That day, though, is apparently not near.

Having regard to the resolutions adopted and the whole spirit animating the Conference, it must be agreed the Union is very much alive—never more so. Membership has increased and a new spirit is abroad. Past Conferences have struck a note almost amounting to despair, but the Cheltenham Conference was alive and full of hope for the future. Its members were fired with enthusiasm for progress. When this fact is appreciated, those who, like me, criticize some of the decisions will, with me, recognize the dawn of a new day and look for a distinct improvement in the prospects of the profession. The Cheltenham Conference was a distinct success.

### CRITICAL NOTES.

#### BY AN UNOFFICIAL VISITOR.

I AM not at all sure that Cheltenham is a really suitable place for a Conference of the National Union of Teachers. Its well-bred air of rather faded distinction had a chilling effect on the exuberance of a certain type of delegate; and, startling as one or two of the Conference decisions were, one cannot help thinking that there would have been many other exceptional happenings had the atmosphere been more bracing.

It is a mistake, however, to think that the Conference hall was the real centre of the Conference. It almost proved itself to be so, once or twice, it is true, but for the greater part of the week the heart of the N.U.T. world was enshrined in the Queen's Hotel. There the members of the Executive were quartered (and also, it may be worth while to chronicle, the special correspondent of the *Morning Post*), and there doubtless were important measures informally debated, to be afterwards commended to the delegates. There, too, one may be safe in conjecturing, the wickedness of certain of the delegates, as revealed below, was dwelt upon with both sorrow and anger.

To understand your N.U.T., it is necessary to grasp the full significance of the isolation of this score or so of men and women in the Queen's Hotel and the cordon of convention and etiquette that divided them from the 1,800 delegates who crowded every other part of the town. The Executive controls the N.U.T. to a greater degree than its name would indicate, and the Executive is a body to which election is difficult and whose personnel in the ordinary way changes remarkably little. What the Executive says generally "goes."

Now the Cheltenham Conference was interesting in that what the Executive said did not always "go" with that smoothness, and that sense of the inevitable, that custom decrees. There was, for instance, the amendment which demanded "full partnership in administration," and which was carried in direct defiance of the Executive's wishes. That body had most carefully drafted the original resolution. It was, one felt, most unfeeling and ungrateful of the delegates so readily to respond to a suggestion to turn it inside out. It was obvious that the dignity of the Executive was thereby outraged, and that the delegates had distinctly lowered themselves in the opinion of the ladies and gentlemen who sat on the platform.

And this leads one to the observation that the palmy days of the Executive, when a comparatively tame Conference accepted their fiat unquestioningly, are over. There are two reasons for this. One is that there is now no outstanding figure among their members—no popular Macnamara to bewilder the delegates by juggling with words and—as the writer has more than once witnessed—to persuade them against their better judgment: no Richard Waddington, no Marshall Jackman. The other reason is that there is a considerable section of elementary school teachers who are resolved to force the hand of the Executive at all costs. Their hand was forced in the dispute at Rhondda, where the local teachers would be content with nothing less than the full Union scale, which had hitherto been unattainable—a kind of carrot dangled in front of a donkey's nose as an incentive to progress rather than as a prospective reward. The Executive are being driven from their *laissez faire* attitude into one more vigorous. One gathers that they do not altogether like it.

The announcement of the result of the referendum on Equal Pay gave a bad quarter of an hour to many people. Some of the delegates—so light-hearted did they appear to be—could have had no conception of the vista of unpleasant possibilities it opens up. The more thoughtful of men know full well what it means, and the portentous National Association of Men Teachers will probably be an actuality by the time these lines appear in print, and, moreover, will shortly perhaps have an organ of its own.

What is the poor Executive member to do in such circumstances? He can only say nice things to the men and carry out the mandate of the women.

These grave or amusing—the choice is left to the reader—considerations were not visible on the surface of the Conference. Conference is the occasion of a pleasant holiday for most of the delegates. They enter the Conference hall in a holiday mood, and have been known to laugh at the feeblest of witticisms. A really able speaker can charm them away, like the proverbial Pied Piper, from the pathway laid down by their local associations.

The writer here offers a suggestion—a serious one, however trifling in appearance. Let the Executive take their courage in both hands, and next year, instead of holding the Conference at Brighton, shepherd the delegates away from the frivolities of towns and persuade them to come to sober decisions in the bracing surroundings of a camp under canvas. Then there will be little possibility of the teaching of cookery being made optional by resolution on the grounds that the inclusion of the subject in the school

curriculum is a trick of the "employing class" to gain cheap labour.

Able men and women on the Executive heightened their prestige as able men and women always will. Mr. Bently has a stock of sound common sense that serves him in good stead. Mr. Crook, whom he handsomely beat in the contest for the Treasurership, has a ready tongue and no mean ability. Mr. Powell is rapidly making his way to the forefront of Union politics. Mr. Steer added little to an already considerable reputation. Miss Conway, Miss Wood (the new Vice-President), and Miss Broome are really gifted women who would make their way in any assembly.

The most outstanding figure on the platform was that of the popular General Secretary, Sir James Yoxall, and there is no mistaking the genuine affection with which he was regarded by the delegates. Probably he is the only person with a *locus standi* in the Conference who could have persuaded it to agree, against its instinctive inclinations, with almost any resolution.

But Conference is a curious, unwieldy sort of assembly. And its size varies from session to session, almost from hour to hour. There is no roll-call, and delegates drift in and drift out in the most inconsequential way. Late risers find that important resolutions have been passed while they dallied at the breakfast table, and a jaunt into the country often takes the more irresponsible delegates miles away from the jaded atmosphere of the Conference hall. Is it any wonder that unbalanced decisions are occasionally made?

I venture to make a second suggestion. The Executive should insist on a register of attendances being kept and the total attendances of each delegate being published in the *Schoolmaster*.

Mr. Fisher's absence caused great disappointment, and one felt sorry for the Directors of Education who had made the journey to Cheltenham in the expectation of hearing him, and who were consoling themselves by making a perfunctory round of the Publishers' Exhibition.

And perhaps one felt a little sorry for the delegates in whose hearts a real passion for education burns, and to whom some of the proceedings of the Cheltenham Conference were a source of disillusionment. A really representative Conference, in addition to reflecting the widespread unrest, would surely have also reflected in a still greater degree the glowing possibilities that the Education Act unfolds.

There is small prospect that things will be better at next year's Brighton Conference. The sex wrangle will then be near or at a crisis. The uncertificated teacher, who has already proved his possession of a voice, will be represented. But, says one of the delegates who cast the 30,000 votes against his admission to the Union, he will not be there in person, because he will not be strong enough in the local associations to secure direct representation at the Conference.

So there it is. One must resign oneself to the advent of at least two more sectional associations, which will work openly and secretly against other bodies of the same kind within the National Union of Teachers. It is the greatest tribute one can pay to the strength of that organization that it continues to survive the disintegrating influences which seem to grow with every year of its life.

## PEACE CELEBRATIONS. A SCHOOL COMPETITION.

AT the Blydon Secondary School, County Durham (Head Master, Mr. R. N. Wilson, B.A., B.Sc.), the pupils recently had a competition for the best essays on "Peace Celebrations." Prizes were offered by *The Educational Times*. We have pleasure in appending the winning essays, prefaced by a memorandum on the Competition kindly furnished by the Head Master.

### Notes on the Essays.

By R. Wilson, B.A., B.Sc.

The essays submitted numbered 350. After a dozen or so had been read it became evident that some ideas as to the means of celebrating peace were common to the majority of the papers, and that it would be interesting, after eliminating this highest common factor, to place on record separately the several views of individual writers.

The ways of celebrating peace which were common to the majority of the papers were:

- (a) Service of Thanksgiving was first and foremost.
- (b) Soldiers and sailors to receive special and preferential consideration, especially those blinded, wounded, or maimed.
- (c) "Something substantial" must be done for the bereaved, e.g. sums of money, cottage homes, &c.
- (d) Public "teas" and general rejoicings.
- (e) A general holiday for all workers—schoolboys to receive at least a fortnight's, says one. "The Sovereigns of Europe, who still retain their crowns, should grant a month's holiday as a thanksgiving!"—"let it be such a holiday as will live in a boy's memory for ever!"

(f) Most advocate bonfires and the display of fireworks to be given some time during the celebrations; but only two suggested that the Kaiser's effigy should be publicly burnt—he is too contemptible now even for schoolboy recognition.

(g) Several writers groping blindly after liberty suggest the abolition of "Dora" in her various guises. One small girl, forsooth, would have the "public houses" open all day. (Echo whispers that her father is in the brewing trade.) Let Ration Books be publicly burnt, and let the Food Controller release plenty of food for everybody and at pre-War prices. "After four years of War bread and margarine let every girl have iced cakes and pre-War dainties to her heart's content for one day at least." "As liberty consists of doing what you like without detriment to your neighbour," says another, "let every one enjoy the pursuit of his own hobby that day; even let those kind gentlemen who have their enjoyment in public speaking have their turn without molestation; but Members of Parliament and Mr. Lloyd George might be given a holiday." "Let Railway Companies' charge be a penny per mile for passengers again; but let all our Colonial soldiers travel free so that they may see our cathedrals before they return home."

Individual writers propose many and various means for the celebration of peace wherein are reflected the various phases of the child mind. Some would celebrate the event by the giving of souvenirs, by the holding of carnivals and pageants, by the distribution of smokes to old people, and by erection of hospitals, libraries, and monuments. It was a very small girl

who thought that she ought to be allowed "to stay up" as long as she liked on Peace Night. Another would finish the day with a "Peace Ball" in the school hall, at the end of which each scholar would receive a photo of the head master and staff! For those not attending a secondary school, let the theatres and picture palaces be free!

Another would have a new peal of bells for the Church, to be rung the first time on Peace Day, to call all the people to church to hear the reading of the village roll of honour.

"Let us have no vain Roman Triumph," says another, "but rather a modern and civilized form of celebration, wherein even we may show some little act of kindness to the enemy prisoners living in our land."

Another boy—not of too studious habits, it must be confessed—would have all "1919 examinations" cancelled by "Royal Proclamation."

"Let the day on which peace is signed be henceforth a 'bank holiday,' and annually on this day let those sailors and soldiers who have been maimed, wounded, or blinded in the War be each year suitably entertained and honoured. Let us, in our gratitude and rejoicings, think of the vacant chairs, and see that the soldiers' orphans lack no necessities."

"Let our celebrations be merry, but of short duration, and then let us get on with 'reconstruction,' not forgetting to add more entrance scholarships to the secondary school."

"Let no strong drink be either made nor sold within twelve months after the signing of peace, but let everybody be made to do something for the common good—each for each, and all for all."

### First Prize Essay.

By William Stephenson (Form VI).

"The Hero as Divinity, the Hero as Prophet, are productions of old ages," said Carlyle in one of his essays, but the Hero as whole nations of people, a Hero-Spirit of bewildering self-sacrifice, a depth of sense of justice and of courage, is the Allies—a composite Hero creation of our own times. Under all the terrible emergencies of war and world-bewilderments, and now under the most complex feelings of victory, we certainly have the right to ask in what ways and with what means is it most appropriate to celebrate the victorious end of the war.

Nature's laws are eternal; her small still voice, speaking from the inmost heart of us all, bids us celebrate the end in a manner in accordance with the wishes of our hearts, and with our individual feelings. Before any attempts at solutions of this problem, it must be emphasized that we cannot have unity in the ways of celebration—at least not at present; that we cannot and should not hope to have some fixed programme of ceremony or duty—with lord mayors and other functionaries exhibited here and there, with forms of celebration to be followed by all, soldier and sailor; widow, mother, and sweet-hearts whose loved ones have given freely of life; rich and poor alike. We must have unlimited freedom to do justice to this Peace Day—let everyone be free at least for one day, to give himself or herself up to the delights, remembrances, and sorrows that war has brought—and that victory only intensifies. The portal to the realization of the infinite good that may be obtained in this way will be readily opened if we try to visualize this Peace Day in a sort of prophetic panorama that will perhaps materialize when this Great Day comes.

It is Peace Day—and it has crystallized itself in a magnificent manner, for it is a day in harmony with the spirits of the victorious people who are celebrating the end of war. Totally

careless of doing work—no longer wishing to do work, not in the least conscious that it had or has any work to do, that teeming company of men, women and children are giving themselves up to enjoyment. In the morning there had been a gorgeous display of arms—a parade of thousands of returned soldiers and sailors, with tanks, guns, and objects of curiosity, each with a remembrance of some brave deed or dastardly act. Military and civil bands were playing, banners were flying from every building (the manufacture of these flags giving some employment to out-of-work soldiers and sailors and munition people), addresses were given by leading men, the people had cheered loud and long and sung songs—all, all of peace and victory.

Everyone was free for this one day. There were open-air dances on the green to the music of the bands, and happy contented parties of pleasure seekers did everything to make the day a memorable one—one which they would never forget. There were some who made themselves happy in seeing to the happiness of others. Entertainments were given, always with the returned soldier and sailor in the foreground. Incessant happiness! An inevitable feeling amongst these people. It is one way of celebrating peace and victory.

On that same day let us see others. Floods of light were streaming upon the lofty halls of big houses—country seats and town mansions. Music was pealing loud and harmonious above the ringing of wine-cups, the clatter of a banquet and the merry din of voices. Massive plate glittered on the tables; silks, satins and jewels shone and sparkled around it. All that luxury could lavish, all that refinement could require enhanced the splendour of the feast—and the feasters served themselves. Everything had been prepared beforehand. No servants were attending at this sumptuous feast. Everyone was free for this one day—everyone was celebrating a famous victory.

Oh, it is frightful when a whole nation, as our Fore-fathers used to say, "have forgotten God." Some people thought of these words in conjunction with their thoughts on victory. They meant to celebrate peace as our Scriptures would have us. For this successful end of battle, convulsions and confusions, they spent the whole Peace Day in thanks-giving. Some of them imagined that all worship of God is a scenic phantasmagoria of wax-candles, organ-blasts, and chants—the beautiful wax-light phantasmagoria was certainly very imposing—and even there the feeling of happiness pervaded the whole. Who knows but that the worshippers had greater enjoyment than all the merry-makers and feasters?

Poor woman! Poor mother! . . . The day of universal peace does not dawn happily or brightly on some. To some it brings a sadness—an unbearable, intensified longing for their loved ones who died to defeat the enemy. These people had determined to live and forget! Vain desires! To see others' loved ones returning flushed with victory; to feel the slight and soon-forgotten sympathy from neighbours; to see others being made happy—a happiness that their loved ones might have enjoyed . . . no, not that! any torture! any cruel injustice! anything but that!

It is a day of sorrow and darkness for them—a day which they never will forget.

It is Peace Day in the slums of our great cities—the cities of victorious nations! Heaven's blessedness is not here surely! Hell's cursedness rather! Oh, much enslaved world—these people are not even slaves with thee! The joys of the earth that are precious never visit these people—these poor children especially. Food and raiment, a social hearth, souls to love and who love them are forbidden them! Only death and misery and extreme sorrow are here.

How can they even enjoy a little of the fruits of victory when they are themselves starved and hungry, ill and most barely clothed? Nothing has been done by those merry-makers and feasters, those men rich with the plunders of war, and those men of religion, to help them! Unstained by wasteful deformities, by wasted tears or heart's-blood of men—they have forgotten the existence of the poor. The enormous, all conquering, flame-crowned host has forgotten that there are some mortals who require the wealth that they are spending on enjoyment for the bare necessities of life!

Must this be so? It will of a surety be a real, too real, picture of life on Peace Day, unless something is done at once. What a tremendous responsibility before God and men rests somewhere! Spinners, ploughers, builders, miners, seamen, soldiers, statesmen, poets, and kings—shall we see this and look on well pleased with ourselves?

There is a remedy. These poor of the slums can be brought up as high as a birth of heaven, and, to my mind, it would be an act of immeasurable mercy and heavenly thanksgiving if this should be done. Let God's justice, let nobleness and manly gratitude, let pity testify themselves in a transmission of life to this entirely broken population, this illuminated Chaos, which is the nucleus of your own eternal Chaos if you heed not.

What a future you should then have! What an everlasting memorial to Peace and Victory!

### Second Prize Essay.

By Hugh G. Soulsby (Form V b.)

The day on which the final peace is signed between the hostile Powers will be marked as a day of national rejoicing and festivity. War-worn and tired people will feel as if a great load has been lifted from their shoulders, and doubtless will give expression to their pent-up feelings in many ways. But when the day of rejoicing is finished, and they come to reflect, they will see that the day's doings, though pleasant at the time, were but fiery display, and a demand will arise for something more lasting, more substantial, as a sign of the nation's gratitude to God for its deliverance from the horrors of war.

The temporary celebrations will need to be as spectacular as possible. In every town and city on the morning of the great day a procession should march through the streets, headed by the mayor and his councillors. We may well quote the scene from Lord Macaulay's "Spanish Armada":

The stout old sheriff comes;  
Behind him march the halberdiers; before him sound the drums;  
And haughtily the trumpets peal, and gaily dance the bells.

Following the troops should be school-children, dressed to represent all the nations of the earth, a symbol of the League of Nations, and bringing up the rear should be big guns, tanks, and trophies of war. Flags should fly, drums beat, and guns roar, while overhead aeroplanes should perform their most daring feats. The procession should end at the cathedral or parish church, where a solemn service of thanksgiving should be held. The afternoon should be spent in games and sports in the public park. The art galleries—displaying war pictures and a war museum—should be open all day, free of charge. In the evening kinemas should be free, while overhead, illuminated airships should fly in the formation of the word "peace." A great firework display should be held in the park, while the country from John-o'-Groats to Land's End should be one blaze of bonfires. A week's holiday for the schools is taken for granted, while the anniversary of the day should be a national bank holiday.

The old people who are too weak to take part in a procession deserve special treatment. They could be conveyed in vehicles to the scene of excitement, and there have comforts peculiar to their needs.

But England should have more than temporary celebrations. The honour of the country should demand that the men who defended her in her dark days of peril—who kept the Hun from our gates, and finally sent him back beyond the Rhine—should be given congenial work and the necessary leisure, and be able to keep themselves in comfort.

There are some who will never come back, and whose last resting-place is marked by a little wooden cross. What can be done for them? Nothing. But their children can receive a good primary- and secondary-school education, so that they may grow to be well educated citizens, capable of directing and controlling the State in which they are to live in the "piping times of peace."

Thus would the celebration of this great event assume a form appropriate not only to the passing mood of the people, but also to the desire to build upon the ruins of war a healthier and happier national life.

## SUBJECTS AND METHODS.

### SUMMER SCHOOLS IN 1919.

THE end of active warfare has brought with it the possibility of a revival of Vacation Courses, or Summer Schools. During this year there will be many meetings arranged for teachers and students. For the information of those who desire to spend a part of their summer holiday in study and discussion amid pleasant surroundings, the following particulars have been prepared. Full details of the arrangements may be obtained on application to the Secretary or other responsible official. The range of choice is extremely wide, and in several cases students may receive grants to aid them in meeting the expenses of the courses.

#### 1. St. Andrews Provincial Committee for the Training of Teachers.

This body has arranged a Summer School for Teachers, with classes in child training (Montessori and Froebelian), story telling, music, games, rhythmic movements, and other modern features of school work. Full particulars and dates from the Director of Studies, James Malloch, 77 North Street, St. Andrews.

#### 2. Barry Summer School.

Organized by the Glamorgan County Council; Director, Mr. A. Sutcliffe. The subjects include educational hand-work, art, nature study, hygiene and physical training, practical geography, gardening, needlework, and dressmaking. A novel feature of the course is a Camp for Women, where students may live under canvas and save money. Dates, July 28 to August 23. Prospectus and application forms from the Chief Education Official, County Hall, Cardiff.

#### 3. The Board of Education.

The Board are arranging a number of short courses of instruction for teachers in secondary schools named on their list of efficient schools or in training colleges recognized under their regulations. Teachers who wish to attend should obtain Form 6 U. from their Principal and send it, duly completed, to the Board of Education before June 1. Those who fulfil the conditions and are selected to attend a course will be allowed third-class return fare and a maintenance grant of £1 a week. The courses so far provided, with places and probable dates, are shown below:—

*English* (women only): Cambridge, Aug. 13-26.

*English*: Oxford, Aug. 1-11.

*History* (men only): Eton, Aug. 25-Sept. 3.

*Geography*: Northern Centre, to be arranged Aug. 19-Sept. 1.

*Geography*: Southern Centre, Aug. 7-20.

*Scripture*: Cambridge, Aug. 5-16.

*French* (women only): London, Bedford College, Aug. 21-Sept. 3.

*French*: Northern Centre, a fortnight in August.

*Latin*: Ilkley, Aug. 11-27.

*Mathematics*: London, Aug. 14-27.

*Mathematics*: Dudley, Aug. 21-Sept. 3.

*Botany*: Manchester, Aug. 21-Sept. 3.

*Physics* (men only): Aug. 21-Sept. 3.

*Chemistry*: Cheltenham, Aug. 21-Sept. 3.

*Music*: London, Aug. 14-27.

In addition to arranging these special courses for secondary-school teachers, the Board will provide maintenance grants and travelling allowances to teachers—up to the number of 300—who desire to attend courses in Physical Training at Scarborough or Barry. Applications should be made on Form 121 M. Preference is given to young teachers from public elementary schools and to men who have served in the Army. Forms may be obtained from the Local Authorities, and should be returned not later than May 20.

**4. Caen.**

The *Institut Pédagogique International* has arranged a holiday course in French at Caen, in Normandy, from July 3 to August 30. Particulars may be obtained from Prof. E. Lebonnois, 16 Avenue de Greully, Caen.

**5. Civic and Moral Education League and Eugenics Education Society.**

A summer school of Civics and Eugenics will be held at Cambridge from August 2 to 16. Inquiries should be addressed to The Summer School Secretary, 11 Lincoln's Inn Fields, London, W.C.2.

**6. Dalcroze Eurhythmics.**

A school will be held at Oxford from August 4 to 16. Classes in music and rhythmic exercises will be held. Apply to The Dalcroze School of Eurhythmics, 23 Store Street, London, W.C.1.

**7. Educational Handwork Association.**

This body has arranged courses as formerly at Scarborough, Falmouth, and St. Anne's-on-Sea, from July 28 to August 23. Handwork subjects are taken at all three centres, but physical training at Scarborough only. Selected teachers may obtain a Government grant enabling them to attend at Scarborough for physical training. Apply, for Scarborough, to Mr. J. Tipping, 35 Lower Rushton Road, Bradford; for Falmouth, to Mr. C. Scaman, 38 Victoria Park Avenue, Cardiff; for St. Anne's, to Prof. J. A. Green, The University, Sheffield. These courses are deservedly popular, and very valuable to teachers of handwork and allied subjects. Hostel accommodation is provided, and early application is necessary.

**8. English Folk Dance Society.**

A summer school of Folk Song and Dance is to be held at Stratford-on-Avon from July 26 to August 23. Apply for particulars to The Secretary, English Folk Dance Society, 73 Avenue Chambers, Vernon Place, London, W.C.1.

**9. Froebel Society and Junior Schools Association.**

The Summer School will be held at Westfield College, Hampstead, under the direction of Miss James. In addition to classes in handwork, which are designed to equip students for the new diploma in handwork of the National Froebel Union, there will be lectures and discussions on the general topic of "Reality and Life in Education." Apply, before June 1, to Miss James, 10 Park Mansions, Battersea Park, London, S.W.11.

**10. Grenoble.**

The University of Grenoble offers holiday classes in French from July 1 to October 31. Address: Comité de Patronage des Etudiants Etrangers, Grenoble, France.

**11. Italian School at Girton.**

The Modern Language Association, acting with the authority of Girton College, Cambridge, has arranged an excellent programme of classes in Italian, open to men and women. The total cost of board, lodging, and tuition from July 28 to August 16 is £8. 8s. Apply at once to Miss K. T. Butler, Girton College, Cambridge.

**12. Oxford Summer Meeting.**

The Delegacy for the Extension of Teaching has organized a meeting from Friday, August 1, to Thursday, August 14. The main subject of study will be "The British Commonwealth: Its Historical Evolution, its Literary Inspiration, and its Problems—Political, Economic, Social, and Spiritual." Lord Milner is expected to give the opening address, and among the lecturers will be Lord Sinha, Lord Askwith, Dr. Addison, and Mr. J. H. Whitley. Apply to the Secretary, Extension Delegacy, Oxford.

**13. Speech Training.**

The Summer School of Speech Training will be held at Stratford-on-Avon from August 1 to August 16. Apply to Miss Fogerty, Central School of Speech Training, Royal Albert Hall, South Kensington, S.W.7.

**14. The Teachers' Guild.**

Courses in French and Spanish will be held at Oxford from August 13 to August 29. Apply to the General Secretary, Teachers' Guild, 9 Brunswick Square, London, W.C.1.

**15. Uplands Summer Meeting.**

The Uplands Association will hold a meeting for parents and teachers at the County House, Werneth Low, Hyde, Cheshire, from Wednesday, July 30, to Saturday, August 16. The gathering will be held on the farm recently acquired for the Association, and the work will be mainly in the open air. Children may attend with their parents, and special classes are provided for them. Apply, before June 21, to the Secretary, 21 Broadlands Road, Highgate, London, N.6.

**16. West Riding Education Committee.**

At Bingley Training College a special course for teachers in the West Riding will be held from August 6 to August 22. Information may be obtained from the Secretary, West Riding Education Committee, Wakefield.

**17. Woodbrooke Summer School.**

After an interval of two years, the Summer School in History, arranged by Mr. F. S. Marvin, is to be held from August 1 to August 11 at Woodbrooke Settlement, Selly Oak, Birmingham. The list of lecturers includes the names of Mr. F. S. Marvin, Prof. J. A. Smith, Mr. A. E. Zimmern, and Mr. C. P. Gooch. We understand that the list of students is being filled rapidly, and it is necessary to make early application, sending a booking fee of 5s., to Mr. Edwin Gilbert, 54 Woodbrooke Road, Bournville, Birmingham. The total fee for lectures, board, and lodging is 2½ guineas.

**Musical Education.**

The dictum of Mr. Bernard Shaw that "He who can, does; he who cannot, teaches," was quoted by Prof. John Adams, M.A., LL.D., when delivering the opening lecture of the second term of the Training School for Music Teachers at the Morley Hall on May 6, entitled "The Making of a Teacher." Dr. Adams confessed that he felt there was some truth in this, and why not? for with training they may be able to help others to do that which they themselves cannot, but in the musical world probably the reverse has been truer, and those who would, have presumed therefore that they could, teach.

It is now being realized more and more deeply that teaching is itself an art. Prof. Adams's description of an artist was "that he was one who never fumbled," and he said that the object of training teachers was that they might be able to carry through their work with certainty, for training would place at their disposal all those general principles which were universally recognized by educationists; it was not intended to lay down fixed rules as to how they were to teach. "Sympathy," the lecturer insisted, was the first essential of a teacher: he must not merely know his subject nor even be able to impart knowledge only; he must see his subject from the point of view of his pupil, into whose age, circumstances, and conditions he should always put himself.

The Chairman (Mr. Stewart Macpherson, F.R.A.M.), himself one of the lecturers at the school, emphasized the advantages contingent upon the association together of the artist and the educationist.

The home of the school is 19 Berners Street, W.1.

# THE COLLEGE OF PRECEPTORS.

## PRIVATE SCHOOLS AND THE NEW ACTS.

### IMPORTANT.

THE operation of the Education Act, 1918, and the School Teachers Superannuation Act must profoundly affect the future position of Private Schools; and, although its full effect cannot yet be foreseen, it is imperative that Private Schools should take steps to adjust themselves to new conditions.

The College of Preceptors, which by the terms of its Royal Charter is charged among other things with the duty of promoting the welfare of Private Schools, offers itself as a centre for common action on behalf of such Schools. With this object it invites non-State-aided Schools to affiliate themselves to the College.

As a condition of affiliation it will be necessary for the Schools to satisfy the College as to the character and standard of the education given, and for this purpose they will be requested to submit the School Records, and

perhaps to undergo inspection by the College unless they have been recently inspected by a competent authority.

The College hopes to render service to the affiliated Schools by offering to the public and to the Education Authorities a satisfactory guarantee of efficiency, by endeavouring to secure the recognition of such Schools as part of the provision for national education, and by furnishing to the Schools information and advice. The College will also press the claim of teachers in non-State-aided Schools to share in the benefits of the School Teachers Superannuation Act, or, alternatively, will promote an endeavour to arrange an independent Pensions Scheme for such Teachers.

Schools desiring to be affiliated to the College may obtain forms of application from the Secretary. The fee payable to the College for affiliation is £3. 3s. a year.

## The "ARETHUSA" TRAINING SHIP

and Shaftesbury Homes at Bisley,  
Twickenham, Sudbury, Ealing, &c.

## NEED HELP

2,600 Boys sent into the Royal Navy.

More than 6,500 have entered Merchant Service.

Old Boys from the Society's Country Homes are serving  
in 120 British and Colonial Regiments.

Special help is wanted for the War Emergency Fund.

Prospectus on application to THE DALCROZE SCHOOL OF EURHYTHMICS, Limited, 23 Store Street, London, W.C. 1.

# GLAMORGAN COUNTY COUNCIL.

## SUMMER SCHOOL AT BARRY, 1919.

Director: Mr. A. SUTCLIFFE.

The FOURTEENTH SUMMER SCHOOL for Educational Handwork, Art, Nature Study, Hygiene, and Physical Training for Men and Women, Plain Needlework, Art Needlework, Dressmaking, Practical Geography, Gardening, Welsh, Bookbinding, &c., will be held at the County School for Boys and the County School for Girls, Barry, from July 28th to August 23rd, 1919.

A special class in Pedagogy of Handwork and Practical Drawing will also be arranged.

Barry is an ideal centre for a Holiday Course. It is situated on the Bristol Channel about 8 miles from Cardiff, and is the natural centre of a charming neighbourhood. There are excellent facilities for Cricket, Tennis, Boating, Cycling, Golf, &c.

A Camp for Women will be established in the grounds of the Training College, Barry, which is adjacent to the County Schools.

Accommodation for a limited number of women students will be provided at the College Hostel.

Prospectus, together with application forms, may be obtained from the

CHIEF EDUCATION OFFICIAL, COUNTY HALL, CARDIFF.

# WOODBROOKE HISTORY SCHOOL.

Revised Dates:

Saturday, August 2—Tuesday, August 12.

After a lapse of two years, the Summer History School arranged by F. S. MARVIN (Staff Inspector, Board of Education) is to be revived at Woodbrooke, near Birmingham.

This year's subject is

## "RECENT DEVELOPMENTS OF EUROPEAN THOUGHT."

The School will assemble on Saturday, August 2, and continue for 10 days.

Students will be housed in the three adjoining Settlements of Woodbrooke, Kingsmead, and West Hill. Separate bedrooms. The meals will be taken in common, and ample accommodation is made for Lawn Tennis each afternoon and for music each evening.

The charge, an *entirely inclusive* one, will be 2½ guineas. Booking fee of 5s. should be sent at once, as the School is limited to 120 students and is already nearly full.

All applications should be made to—

EDWIN GILBERT,  
54 Woodbrooke Road,  
Bournville.

The **Lecturers** will be—Prof. BRAGG (Imperial College of Science), A. CLUTTON BROCK, C. DELISLE BURNS, Dr. A. J. CARLYLE (Oxford), G. P. GOOCH, J. W. HEADLAM-MORLEY, Prof. C. H. HERFORD (Manchester University), Baron FRIEDRICH VON HÜGEL, F. S. MARVIN, Prof. SHERRINGTON (Oxford), Prof. J. A. SMITH (Oxford), Miss STAWELL (Newnham College, Cambridge), Prof. A. E. TAYLOR (St. Andrews), ERNEST WALKER (Oxford), and A. E. ZIMMERN.

# FROEBEL SOCIETY AND JUNIOR SCHOOLS ASSOCIATION.

## A SUMMER SCHOOL

will be held from July 31—August 16 at Westfield College, University of London. One Course will consist of lectures, accounts of experiments, and discussions bearing on "Reality and Life in Education." Other Courses will be on Handwork—for guidance in preparation for the new Diploma of Handwork of the National Froebel Union—Gardening, Eurhythmics, Music (including Sight Singing, Ear Training, &c.).

This year a few grants towards expenses will be given by the Council of the Froebel Society. Applications should be made before June 1st.

Further particulars may be obtained from Miss James, 10 Park Mansions, Battersea Park, S.W. 11.

# Cambridge University Press

## LITERARY SECTION.

## BOOKS AND THE MAN.

**A Schoolmaster's Odyssey.**

MR. F. G. TRAYES left England some twenty years ago to enter the Siamese Education Department. In the summer of 1917 he had completed his period of service, the latter part of the time having been spent in carrying out the duties of Principal of a training college in Bangkok. He returned from this work and received the cordial thanks of the Siamese Government for his services. With his wife he set out to return home, hoping to renew former friendships and, above all, looking forward to a speedy family reunion. They left Bangkok on September 8, and at Singapore joined the Japanese mail steamer "Hitachi Maru." Colombo was reached without incident, and on September 24 the boat sailed for Cape Town. Two days later, when she was 500 miles out, the German raider "Wolf" captured the "Hitachi Maru" with the greatest ease, the officers and crew apparently being quite unprepared for such a contingency. Thereafter Mr. and Mrs. Trayes, with their unfortunate fellow-passengers, spent five months as prisoners on board the "Wolf" as one of her prizes, finding relief ultimately when the "Igotz Mendi" was wrecked off the coast of Denmark on February 24, 1918. The story of their painful voyaging is told with great skill and restraint in a volume issued by Messrs. Headley Bros. at 3s. 6d. net. It bears the simple title "Five Months on a German Raider," and, in something under two hundred pages, affords glimpses of indescribable suffering, great fortitude, much cheerfulness, and, in fairness be it said, unexpected consideration on the part of the enemy captors. We are told how German ship's officers gave up their quarters to women prisoners, and we gather that, although food ran very short, the captives were able to obtain a share of what was available.

The real and most wearing cruelty was in keeping these unfortunates at sea in overcrowded ships, dosing them with lies from time to time in the shape of promises of an early landing at some neutral port. Meanwhile the prisoners could not communicate with their friends, the neutral ports were diminishing in number, and every day increased the chances of meeting a British cruiser—a contingency which would have meant that the English prisoners would have been fired upon by their own countrymen, or that their ship would have been sunk by the Germans to avoid capture. With these alternatives constantly before them, the unhappy travellers were carried by unfrequented routes through the Indian Ocean, round the Cape of Good Hope, northwards in mid-Atlantic to the east of Iceland, and thence eastwards towards Kiel, a port which was never reached, since their boat ran ashore at Skagen, with the happy result that the prisoners were released and their captors interned as belligerents—a dramatic turning of the tables.

The record is profoundly interesting, and should be read even by those who have had a surfeit of "war books"; for this is no ordinary "war book," but a fine story of quiet fortitude, justifying one's faith in human nature.

SILAS BIRCH.

## REVIEWS AND NOTICES.

**Education.**

*Recreation for Teachers.* By Henry S. Curtis.  
(8s. 6d. net. Macmillan.)

Apologizing for the publication of such a book in what is practically war time, Dr. Curtis tells us that "the play movement has been officially promoted in Germany for the last twenty-five years as a war measure"—a striking enough statement, but one that the text of the book really justifies. This time, however, Dr. Curtis turns from the pupils, whose interests he has advocated in his previous books, to the teachers, and makes out an excellent case for the development of the recreative side of their lives. He anticipates the natural objection of school superintendents that "teachers are in school to teach their pupils and not to be entertained," and makes the very effective retort that unless teachers do their work with zest it is not well done. He has made inquiries in various parts of the United States about the way in which teachers spend their leisure time, and is disappointed at the results. The popular recreations are what he calls passive—such as reading, resting, the theatre, and the "movies." What he wants is energetic out-of-door work. Walking is given very frequently as a form of recreation by teachers who have answered his *questionnaire*, but Dr. Curtis finds that in many cases this means little more than walking to and from school, which he rightly declines to recognize as recreation at all. He is a vigorous opponent of convention, and does his best to startle his readers into energetic protest against the present limitations imposed upon women in the way of dress and other matters.

The book is not well arranged, and is full of repetitions. Dr. Curtis acknowledges the repetitions, but claims that they are unavoidable. A little more care in arrangement would, however, have put matters right. The book conveys the impression of being a rather careless gathering together of contributions to various magazines or papers. Its attraction consists in the vigour with which points are made, and the extraordinarily interesting facts with which its generalizations are supported. It does give one a jar to read that "from one and a quarter to one and a half million children in the United States are taught by tubercular teachers." More pleasant is the surprising statement—repeated three or four times in the text—that the automobile "is much our cheapest mode of transportation." The up-to-dateness of the text is proved by the inclusion of the aeroplane as a means of recreative travel, though our author warns us that it will probably be a decade at least before this mode of locomotion comes within the reach of the teachers' purse. For Dr. Curtis takes a very practical view of his subject, and correlates his suggestions with the possibilities of the case. This is why it cannot be said to be irrelevant when he draws up a comparative table of the wages of teachers and artisans. His tables must make teachers long to be carpenters or machinists, or even moulders, though these last seem poorly paid. But when it comes to bricklayers, plasterers, and, above all, plumbers, the poor teacher can only regret the existence of the Tenth Commandment. But still more does the iron enter the soul of the teacher when he runs down the comparative tables of wages of teachers, policemen, and firemen. In many cases the teacher receives little more than half of what is given to his fellow public servants, while at Tampa, in Florida, the policeman gets considerably more than double what the teacher receives. It has to be remembered, however, that the question of sex enters here, and we are not quite sure that Dr. Curtis has been quite fair in his way of making the comparison. In any case, those who are out for equal pay for equal work have here something worth attending to.

It is seldom that Dr. Curtis is dogmatic, so it is interesting to find him categorically settling the question of the best

(Continued on page 184.)

game for teachers. This he uncompromisingly states to be tennis. But no votary of other games can feel aggrieved—except perhaps the lovers of golf, whose game is barred as “generally too expensive both in time and money for teachers”—for our author has a remarkably open mind, and gives his readers the widest possible choice. Only they *must* go into the open air if they are to please him. Still, even here he is open to conviction, for he has a great deal to say about the Teachers’ Clubhouse, and those London teachers who have been talking of such a house in the capital would do well to read what he has to say on this subject.

The book strongly reflects the author’s personality, and sometimes we wish he had let himself go a little more than he has done. On page 231, for example, there is an admirable suggestiveness about an account of a personal experience that would bear expansion. Altogether a stimulating book.

J. A.

*A Record of Opportunity.* (Published by the Appointments Department of the Ministry of Labour, Hotel Windsor, Victoria Street, S.W.1.)

This book of 408 pages is got up in an exceedingly unattractive way. But for all that it is a book, and as such is evidence of the advance Government departments have made in their mode of presenting their reports. How much better this is than the old-fashioned foolscap publications, with their unhygienically long lines of print stretching across a hopelessly broad page! We welcome this “Record” as a great advance on the broadsheet of hateful memory.

The purpose of the volume is to provide information and advice for the benefit of all who are returning to ordinary life after a period of war service of whatever kind. Its full title is “A Record of Opportunity as to Careers and Training.” It contains four chapters, the first two being introductory and quite short. Chapter III describes the present position of educational facilities in the district directorates under which the United Kingdom is grouped by the Appointments Department. Chapter IV, after a short general introduction, deals in a summary manner with the prospects and practice of a number of typical professions. The book is of undoubted importance, both as indicating the desire of the Department to provide opportunities and as supplying really valuable and reliable information about how to use these opportunities. The difficulties in the preparation of such a volume are enormous, and we must not expect the impossible. The work is as up to date as could be expected from a harassed public department. It is true that it is not very encouraging to read on the title-page that it is revised only up to November 1918, but, on the other hand, on the outside paper cover, we read that the book is only “Interim Issue.” It appears, therefore, that the Department intend to keep it up to date and to reissue it at intervals. In the meantime the introduction informs us that certain circulars are being issued, and those who are directly interested in these circulars are recommended to keep in touch with the Windsor Hotel in order not to miss any new developments that may take place.

The fourth chapter contains matter not quite so liable to change from month to month, and that may therefore be regarded as of more permanent value. We have naturally given special attention to the section dealing with education, and we find that it gives a very satisfactory statement of the present condition of affairs and supplies what must be admitted to be useful information and wise advice. Judging the rest of the book by this section, of which we feel capable of forming a just opinion, we feel entitled to recommend the volume as a valuable means of guiding our young men returning to civil life.

A.

*Minima.* By J. D. B. H. (2s. 6d. net. Skeffington.)

This little volume will be of great service to those who are engaged in preparing young people for confirmation. It sets forth, in a most admirable way, the fundamentals of the Christian faith, suggests some excellent illustrations, and is marked by a wise freedom from any appeals to abstract authority. The various chapters may be expanded into very serviceable lessons for children at any age.

## English.

*Selections from James Boswell’s Life of Samuel Johnson.* Chosen and edited by R. W. Chapman, M.A. (3s. 6d. net. Clarendon Press.)

This book will form a useful companion and sequel to “The Story of Dr. Johnson” (S. C. Roberts), recently published by the Cambridge Press and reviewed in these columns. Both books are apparently intended for younger students, and of the two books we think we prefer the method of Mr. Roberts as being more genuinely attractive, for those who have so far escaped the lure of Johnson and Boswell. Mr. Chapman’s method is simple and unpretentious—some two hundred extracts arranged in chronological order and giving in comprehensive range the sweep of Johnson’s “Life.” Most of the selections are too well known to need comment. The headings are good, and the compiler has worked carefully and methodically. The editor appends a few notes, whose chief merit is their brevity and terseness. Most of these have appeared before, but occasionally the editor’s own personality peeps out in brisk epigrammatic phrase.

On the sound principle that good wine needs no bush, we think the compiler might have omitted his own preface. It is seemingly written in Macedonia (Mr. Chapman is printed as R.G.A.), and it is this distant environment which has perhaps caused lapses into such palpable journalese as “rising generation,” “tender age,” “crepuscular regions,” “gratuitously absurd,” and others; while the implied attack on Macaulay is unnecessary and perhaps unwarranted, even from such a valiant champion of Johnson as the editor appears to be.

*College Composition.* By Charles Sears Baldwin, A.M., Ph.D. (6s. net. Longmans.)

This book enables us to form some idea of the important place achieved by English composition in the curricula of American higher education and of the systematic treatment the subject receives in their colleges. From this point of view alone it merits the attention of all English teachers. The scheme of the treatise follows the classic division of rhetoric and poetic, and treats of (a) The Composition of Ideas, (b) The Composition of Images. Under these two main headings, Prof. Baldwin includes a wealth of sound information and advice, leavened always by ripe and varied experience and nowhere disfigured by a too pretentious “culture.” The author speaks simply and directly, and yet easily and attractively.

“Ideas” are treated systematically under sub-headings of Information, Discussion, and Persuasion, and the earlier pages are a valuable guide to older students in the judicious selection and collection of facts, in note-making and note-taking. The Technic of Composition is arranged, as usual, under Unity, Coherence, and Emphasis, and it is here perhaps that we may trace a common tendency in American English teaching to place “form” before “matter,” a tendency which, if developed, may easily defeat the teacher’s primary object. The advice on “revision” of words, sentences, and paragraphs, with which this section closes, is, however, some of the most valuable in the book.

Under Images, the author discusses fully both description and narration. Numerous illustrative extracts are given; and working rules, rather than general principles, are deduced. The treatment of Descriptive Predicates is sound. All writers—notably book reviewers—are familiar with the difficulty of choosing the right descriptive adjective. The treatment of the “Short Story” shows that America appreciates a literary form still somewhat neglected in this country.

But Prof. Baldwin is, we know, a professor of rhetoric, and this fact is clear in his book, for we find, among other good things, a good exposition of the logical technic of argument; a sweeping survey of logical method, both inductive and deductive; and a full account of the rules and principles of speech-making and debating. All this is excellent, but—to English teachers—somewhat unusual in an English

(Continued on page 186.)

# PITMAN'S READING BOOKS.

BEAUTIFULLY ILLUSTRATED.

### The Triumph of Man.

Being an Account of the Work of Man in the Twentieth Century.

This book contains a simple account of wind, water, steam, and electricity and their applications; of iron and steel and their uses; of the construction and importance of canals, railways, and steamships; and of the way in which the increasing demands of the towns for food and water have been met. Over 130 illustrations, 2s. net.

### The True Patriot's Book. By ORME AGNUS.

The book contains a short sketch of English history, relative to our Constitution and Self-Government; an account of the Constitution and how it has reached its present form; the choosing of a Parliament and its work in Bills, Finance, and Administration; and a description of our methods of Local Government. 39 illustrations, 1s. 9d.

### The Story of a Coal Mine. By T. W. BERRY, F.C.S., Director of Education, Rhondda, Glamorgan.

In a recent circular the Board of Education drew attention to the desirability of introducing into the curriculum of schools in mining districts some elementary instruction in Mining. This Mining Reader aims at fulfilling these conditions in a readable manner. 72 illustrations, 1s. 6d.

## THE SELBORNE SERIES. Nature Study Readers.

### Fairyland Lane. By MARGARET CAMERON, L.L.A.

A Nature Story for young children. Six coloured and 130 black and white illustrations, 1s. 3d.

### Walks and Talks. By C. G. KIDDELL, B.A.

Lessons arranged on a seasonal plan. Eight coloured plates and many black and white illustrations, 1s. 8d.

### Wayside and Seaside. By the same Author.

Suitable for children from 10 to 12 years old. Eight coloured plates and many black and white illustrations, 1s. 8d.

### Glimpses and Gleanings. By the same Author.

Contains original work, extracts from standard authors, and poems, 2s.

### Britannia's Growth and Greatness. An Historical Geography of the British Empire. By A. J. BERRY, M.A.

There are unfolded before the eyes of the reader the various steps by which the desire to reach India by new routes caused the European nations to stumble across and appropriate America; the loss of the New England Colonies caused the development of the Continent in the Southern Seas; and the possession of India led to the control of a large portion of the shores of the Indian Ocean. 60 illustrations, 2s.

### Europa's Childhood and Growth. An Historical Geography of Europe. By A. J. BERRY, M.A.

This is written on an entirely original plan, and attempts to show how the main lines of European history and development have been dependent on geographical features and considerations. Over 100 illustrations, 2s.

### The Romance of our Colonies, or Planting the Flag beyond the Seas. By ROBERT HUDSON.

Twelve tales of stirring and romantic adventure, each woven round the dramatic events attending the critical period in the founding or annexation of one of our overseas dominions or possessions. 30 illustrations, 1s. 10d.

## "HOW GEOGRAPHY AFFECTS HISTORY."

By Sir H. H. JOHNSTON, G.C.M.G., &c.

"That son of mine . . . twelve years old . . . knows that Lisbon on the Tagus is the capital of Portugal . . . that furry things on the maps are mountains, and he can tell you the export of Burmah. But he doesn't know the least thing about *geography*—real geography. He couldn't tell you by looking at a map whether a bit of road ran uphill or down. He has no idea why London came to stand where it is, and he can't understand why the Huns had only two ways of retreat open to them from France. . . ."

"Well, why should he? We shouldn't if we hadn't been obliged to carry maps all round that silly war."

"BUT THOSE ARE THE THINGS THAT MATTER. . . . Learning names isn't any good. Geography is the study of the earth's surface— . . . it ought to be; and that is what I would make it in my school. . . . I would have the boys sent to me for a month every year. When they first came they would just learn physical geography. I would show them mountains, capes, peninsulas, and the rest. Then they would go to maps. . . . How many schoolmasters do you suppose ever dream of helping out their geography lessons with Ordnance maps of their own neighbourhood? And all that would lead up to the effect of physical geography on mankind. I would show them WHY cities were built, WHY nations grew powerful and declined and HOW POLITICAL GEOGRAPHY IS A CONSEQUENCE OF PHYSICAL GEOGRAPHY."—(From an article in the *Daily Chronicle*.)

### What the Teacher needs—

(a few items from an Index of many thousand References)

NAME.....

ADDRESS.....

T.N. 1919.

book. Similarly, we do not commonly find in our textbooks such a full treatment of Dramatic Movement as is here given. This chapter is a seductive invitation to every reader to write plays. We almost fear that Prof. Baldwin's University may become like Manchester, whose people, according to a recent novelist, are divisible into two halves—those who write plays and those who do not.

Hints on "assignments" and on the preparation of manuscript form useful appendices.

Altogether we have a valuable, almost masterly, book, in which English composition receives a noble, dignified, and yet practical, treatment. Yet we feel with this book, as with many such, that correct Literary Form, here so clearly set out, is but one aspect of the subject. Equally and vitally important is the Matter—the content of our work. Unless we have something to say, and say it with soul and individuality, the skeleton of our work stands out stark and empty, revealing all its joints. "Form" may perhaps be taught, and even mastered, but let us beware of disposing of a little knowledge in a pretentious and pedantic literary "form," for the better informed will see through us, even as Scrooge saw through Marley's ghost—even to the buttons on the back of his coat.

F. F. P.

*Composition and Literature.* By Eugene R. Musgrove, A.M. (6s. net. Longmans.)

Mr. Musgrove has produced an energetic but somewhat disappointing compendium. He attempts far too much. In less than five hundred pages (a large number of which are filled with questions and exercises) he rushes boldly and didactically through grammar, punctuation, spelling, syntax, sentence writing, paragraph writing, essay writing, letter writing, manuscript writing, speech-making, debating, style, poetry, the whole of English literature, and the whole of American literature. His innumerable paragraphs—staccato style—dogmatic definitions, and airy indifference to debatable points, leave an English reader rather breathless. Books of this nature may have a place in American high schools, for whom apparently the author writes, but we are doubtful of their real value.

The Composition section opens with a brief statement of the significance of unity, coherence, and emphasis; and this hardens our conviction that American compilers of books on English are obsessed with these principles, until they have become almost catchwords. Certainly in this book the author tires us with their endless reiteration. Apparently he sees in them ample and sufficient measures of English writing—measures to be applied with mechanical ease and automatic certainty. We may be pardoned if we add a more comprehensive criterion of the good in literature—namely sincerity, and what is vaguely termed style or individuality, but this the author dismisses airily in three pages.

A feature of the book is the inclusion of numerous illustrative extracts selected from "Pupils' Themes" (the compiler would enlighten us if he indicated the sex of his chosen pupils). We are not impressed by these. Models, if included, should be of the best. These selections are youthfully immature, frequently highly coloured, effusive and artificial, and sometimes impudent. Mr. Musgrove in printing them, "writes down" too much to a fancied level. The same criticism applies to the section on speech-making and debating. This (and indeed the whole book) is marred by an undue worship of orations and orators such as Lincoln and Burke; but when Mr. Musgrove occupies eight pages in reproducing a "pupils' debate" on "Should term examinations in high schools be abolished?" we feel that he has allowed the classroom to distort and weaken his purpose.

The author's treatment of English literature shows quaint American bias. He would appear to consider "Macbeth" as Shakespeare's masterpiece, for references and quotations are numberless; while, by the same standard, Burke and Stevenson are the chief English prose writers. He is not dismayed even by contemporary English literature, upon which (from 1883 to 1917) he pronounces judgment in three pages. We can only smile at the assurance which permits him (after having named Hardy and Mrs. Humphry Ward)

to add: "Other important writers are Hall Caine, Arnold Bennett, and Herbert G. Wells." Again, we learn that "representatives of the poetic drama are G. B. Shaw, John Galsworthy and Stephen Phillips." Only a little better is, "The best poetry to-day is being written by John Masefield and Alfred Noyes."

*Book Ways.* An Introduction to the Study of English Literature. By Edith Kimpton, M.A. (3s. net. Herbert Russell, Temple Chambers, E.C.4.)

Sketches and synopses of English literature are numerous enough to be wearying to a reviewer, but this is good of its kind. In three hundred pages the author is seldom dull. The book is written for beginners, and the many chapters are attractively headed. The treatment of Shakespeare is meagre. We doubt if even children are much interested in "Shakespeare's children." The boldest part of the book is the attempt to estimate (in nine pages) the literature of to-day. The result is what we might expect. The discussion is mainly of poets, and few present-day prose writers receive even cursory mention. Statements such as "the traditions of the older novelists live in the work of such writers as George Meredith and Thomas Hardy" can mean but little to beginners, and show the weakness of such summary books as these. The chapters follow the traditional grouping of English literature, and indicate a broad highway of general reading, with occasional pleasant byways. The book is chatty and cheerful—good enough perhaps to stand alone without the printed blessings of Prof. Adams and Mr. T. Watts-Dunton, which appear as a frontispiece.

*Prominent Points in the Life and Writings of Shakespeare.* Arranged in Four Tables. By William Poel. (2s. net. Longmans, for Manchester University Press.)

These valuable tables are reprinted from the "Bulletin of the John Rylands Library," and should be welcomed by all students of Shakespeare.

Sheet I deals with the Elizabethan period and Sheet II with the Jacobean period. Both are compactly arranged to show at a glance facts, traditions, contemporary events and allusions, unproved statements, and unknown details in Shakespeare's life.

Sheet III gives the playhouses—a chronology of the actual production in London of Shakespeare's plays. Sheet IV gives a tabular analysis of the structure of the plays themselves according to the 1623 folio.

The amount of valuable information crammed into these few pages is extraordinary, and is evidence of much patient research. Teachers and students alike would do well to include these on their Shakespeare shelf. They will find in them authentic information on difficult and debatable points.

*The Vineyard.* The Organ of the Peasant Arts Guild. Easter 1919. (1s. Allen & Unwin.)

The movement represented by this little periodical advocates mainly a revival of rural handicraft and village peasant industry. The idea or ideal is not new. The return to the Golden Age of the simple rural life, where man lives in idyllic environment, untouched by the foul breath of industrialism, has always had its advocates. To us, however, the ideal seems no nearer realization, nor do we think such a consummation possible or even desirable; for personal experience of both town and country life has not convinced us that Hodge, whether artisan or labourer, possesses any monopoly of either physical or moral virtues, and that his numerous shortcomings are not due always to contamination or contact with town life. Nor, economically, do we see any advantage.

"English Literature for Secondary Schools."—(1) *Sir Philip Sidney's Defence of Poesy.* Edited by Dorothy M. Macardle. (2) *Ruskin: The Crown of Wild Olive.* Edited by J. H. Fowler. (1s. 3d. net each. Macmillan.)

This series should be popular in schools. The present volumes maintain an excellent standard. From their titles it will be seen that they are intended solely for older

*Scotsman.*—"Both valuable and interesting."

Please send for prospectus to—

J. M. DENT & SONS, Ltd.,  
ALDINE HOUSE, BEDFORD ST., LONDON, W.C.2.

scholars, and they are listed as suitable for a fifth year. Each as usual contains sufficient work for one term, and is complete with brief introduction and notes. Of much greater use to both teacher and pupil are the Questions and Exercises, Subjects for Essays, and Helps to Further Study. The selection of the Apologia for Poesy for inclusion in this series is perhaps unexpected, but the editor ably defends its choice. We still feel, however, that its appeal is more to the adult than to the adolescent. We hope that the publishers of this attractive series will continually extend its range.

*Expression the Work of Life; and other Poems.*

By A. R. P. Hickley. (Colchester: Benham & Co.)

Mr. Hickley chiefly essays but one poetic form, the traditional ballad metre, and consequently must be taken in small doses if the reader would avoid somnolence. Yet on the whole we like the poet's attitude and outlook on life, which is always cheerful and not unduly pious. Much shrewd judgment is apparent in such lines as:

A moral hypochondriac,  
The slave of institutions,  
Subservient to his own designs  
Till freed by revolutions.

We have met some such people. The author hardly maintains a consistent level, and some of his work is of the calibre of verses used to fill odd corners of country newspapers. But he need not be discouraged. Perhaps he will give us some more poems and will attempt more varied rhythms.

## History.

*Little Aids to History.*

The Sinn Feiners fortunately did not burn down the buildings in which so many valuable Irish documents are stored, and of which S. F. H. Murray gives a helpful account in his "Short Guide to the Public Record Office, Dublin" (8d. net, S.P.C.K.). Mr. Charles Johnson describes the complete archivist in his "Care of Documents" (6d. net, S.P.C.K.), and includes the wise admonition: "He must not be afraid of dirt, nor must he allow any selfish interest to prevent him from communicating the contents of the documents in his charge to those who desire to make use of them."

In its next chapterettes, of the "Edina Junior Histories," by Miss A. L. Westlake and W. T. Franklin (1s. 4d. net each, Macmillan), pupils of the ages of thirteen to sixteen will find orderly guides, terse, but not too uninteresting, to episodes of English history, with correlated notes on Roman, Mohammedan, and other evolutions, and information on social life and art, &c. Book I covers B.C. 55-A.D. 1154, Book II 1154-1485.

Lord Buckmaster writes a note of commendation to "A Bibliography for Teachers of History," edited by Eileen Power (2s. net, Women's International League, 14 Bedford Row, W.C.1), in which some two hundred entries comprehend books on World History, English Social History, Overseas Dominions, Citizenship, &c. Some are learned "source-books," others are suitable for children. A very useful list. F. J. G.

"Men of Science Series"—*Joseph Priestley.* By D. H. Peacock. (2s. net. S.P.C.K.)

"In regard to poetry, he considered that any further addition to its volume was undesirable, because much of what was added would be bad, and there was already in existence more good poetry than most people had leisure to read." Such was Dr. Priestley's opinion at the period when he was conducting the justly famous Academy at Warrington. We forgive him for his cruel indifference to the poetry of the future in consideration of his many services to science and liberal thinking, which are here recorded by Mr. Peacock in an agreeable biography.

*Little Books of World History.*

(Each 9d. McDougall's Educational Co.)

The young readers for whom these booklets are prepared cannot complain of a lack of noise and colour. For example, here is the Spanish Fury at Antwerp pictured (we were going to say "featured") :—

In every quarter there were hideous cries from the Spaniards of "Saint James, Spain, blood, flesh, fire, sack!" The stream of battle poured along, and in front of the famous Exchange, where in peaceful times five thousand merchants met daily, there was a savage slaughter of the defenders. On the side of the city farthest removed from the castle the Governor tried to rally the Netherlands cavalry.

And there we must leave him. We shall have been amply descriptive if we say that all the "Little Books" back and hew their way in the same vigorous style through the topics of "The Wars of the Cross," "Turks in Europe," "Belgium and Holland," "Before the Great War" (i.e. the period 1814-1914), and "Four Dreamers of World Power" (Philip II, Louis XIV, Napoleon, William II). Future writers on such themes will perhaps devote a little more space to the story of industry and civil progress; indeed, they ought to do so, but we trust they will not be less lively. F. J. G.

*Reference History of England from the Norman Conquest to the Death of Edward VII.* By M. E. Hamilton Hunter and G. G. Ledsam. (6s. net. Andrew Melrose.)

Not pretending to be a "history," this manual is a useful dictionary of dates and people, closing with the year 1910. Hundreds of paragraphs, headed in thick type, and concisely but not dryly written, are crammed with information grouped under the usual periods, the last bearing the now antiquated title of "Hanoverian." There are heaps of thumb-nail sketches of "Celebrities," beginning with Aldred, Archbishop of York, and ending, rather oddly, with Bernard Shaw. He is, indeed, the last item in this handy book. F. J. G.

*The Shakespearian Stage.* Drawn by W. Noel Hills. (Mounted on rollers, 7s. 6d. net; unmounted, 5s. net. Oxford University Press.)

An accurate coloured drawing of the stage as it was in Shakespeare's day. In some respects this differs from the well-known print by John de Witt. Mr. Hills suggests that the stage boxes were somewhat further from the stage balcony than is shown in de Witt's drawing; and the pillars supporting the balcony are on the stage itself and not in the wings. Mr. Noel Hills's picture will be very useful in class work, and a leaflet is supplied giving excellent directions for the study and representation of Shakespeare's plays in schools. Senior pupils and teachers will find the short bibliography very valuable. R.

## Italian.

*A New Italian Grammar.* By E. Grillo, D.Lit. (6s. net. Blackie.)

As the War has revived our interest as a nation in the language and culture of Italy, it may be expected that Italian studies will in the near future regain in our educational curriculum a place as large—and, we may hope, as fruitful—as that they held and adorned in our Renaissance period.

Dr. Grillo has therefore chosen an opportune moment to present us with a new Italian grammar, which appears to us to be the most concise and lucid introduction to the principles of Italian accent and syntax that it has yet been hitherto our good fortune to peruse.

The grammar exhibits many novel features in method and arrangement which may justly claim to mark an advance on previous "methods," and should in practice lighten the task of the teacher and materially assist the learner in mastering the crucial difficulties of Italian. Thus idioms and syntactical rules are judiciously blended with the outlines of accent, while the exercises that exemplify the author's exposition of grammatical rules are brought together and occupy a distinct and separate section of the work. The exercises are admirably chosen and arranged, and, being graduated in difficulty and furnished with references to the grammatical outlines, are well adapted to lead the student imperceptibly from the rudiments of accent to the more abstruse subtleties and elegancies of advanced composition.

Some misprints and occasional defects in minor details, inevitable in such a work, will, we trust, be corrected in subsequent editions. C.

(Continued on page 190.)

# RETIRE ON FULL PAY

**U**NDER the revised scheme of Pensions for Teachers you will be entitled to roughly half-pay when you retire. Excellent as such a scheme is, the prospect of having your salary halved is not an attractive one, for you will have more leisure and more time and opportunity in which to enjoy those things which for so long have been denied you. If you were to retire on full pay you would be able to travel, to live in much better circumstances than half-pay would permit, and it would obviate that "eking out" existence that is the lot of so many.

**I**NDEED there is no need for you to look forward to restricted income on retirement, for by adopting the Century Superannuation Scheme you can easily secure for yourself full salary, and at a cost which will not be an inconvenience whilst you are in school. For instance, supposing you are 25, for a quarterly sum of just about £5 you can secure an additional £104 annually at the age of 60, or if then preferred a lump sum of £1,269 8s. will be paid in lieu of the Income. No medical examination is necessary under this scheme. Probably you already put aside more than such a sum out of your increased salary, so that by adopting this plan you are investing your money to excellent advantage, and without the slightest risk or fear of depreciation. The funds of the Century Insurance Co., Ltd., allied with Friends' Provident Institution, founded 1832, together exceed £5,000,000, and there is no better office in the world.

**Y**OU may think there is the possibility of your not wishing to continue the payments after a few years. The Century recognize this contingency, and in such cases and in the event of death are able to return on the average more than the amount paid in premiums. You are thus secured in any case. If you are interested, kindly fill in and return us the inquiry form at the foot, or a copy of it will do, in order to secure these benefits at age 60. A scheme to meet your requirements will then be submitted.

The Manager,  
Century Superannuation Department,  
90 Cannon Street, London, E.C.4.

## SUPERANNUATION INQUIRY FORM.

TO THE MANAGER,  
CENTURY SUPERANNUATION DEPT.,  
90 CANNON STREET, LONDON, E.C.4.

Please send me details of the Educational Superannuation Scheme. I was born on the.....of.....  
18.....and am inclined to invest about £.....  
(yearly, termly, quarterly) in order to secure an Income or Alternative Cash Sum at age.....

Name (in full) .....

Address .....

*N.B.—The above Plan may, if desired, be adapted so as to include full protection for your dependants in event of your death. Please state clearly if this is desired.*

By Special  Appointment.

To their Majesties the King and Queen and H.M. Queen Alexandra.

IN  
WHOLE and HALF CAKES, WHOLE, HALF, and  
QUARTER PANS,  
and WHOLE, HALF, and LARGE TUBES.

QUARTER PANS of Winsor and Newton's Artists' Water Colours are of the same outside dimensions as the Half Pans. They may, therefore, be used in Winsor and Newton's range of Half Pan Japanned Boxes.

The advantages of habituating the Student at the outset of his career to the use of the BEST materials are so obvious that no attention need be drawn to them.

Messrs. Winsor and Newton's Artists' Water Colours are necessarily more expensive than those usually manufactured for School use, but as, owing to their superior strength, a small quantity yields approximately the same amount of colour surface as the larger pans of Water Colours generally sold for Students' use, the expense in both cases is much the same.

The special attention of Teachers and the public is, therefore, invited to these Quarter Pans of Colour, which, costing practically the same, provide the Student with a superior article.

Full detailed catalogue may be obtained from any of the leading Artists' Colourmen throughout the Country, or from 39 Rathbone Place, London, W.1. Established nearly a Century.

## TUITION BY POST.

Practical Training in

**SHORTHAND,**  
**BOOK-KEEPING AND ACCOUNTANCY,**  
**COMMERCIAL PRACTICE, BANKING,**  
**ADVERTISING, COMMERCIAL LAW.**

Pitman's Postal Courses are admirably adapted for teachers who are unable to take advantage of the ordinary facilities for receiving oral instruction, but desire to qualify in commercial subjects. Each lesson is a full exposition of that part of the subject covered. One course, or any group, may be commenced at any time, and from any stage of present knowledge.

Write for details, stating the subjects in which you are interested.

*Pitman's School*

180 SOUTHAMPTON ROW, LONDON, W.C.1.  
Seven London Branch Schools, and at Bristol and Leeds.

**Chemistry.**

*Coal and its Scientific Uses.* By William A. Bone.  
(21s. net. Longmans.)

Although coal is of fundamental importance to this country, since it is the most important factor in its industries, there is not a very extensive scientific literature on the subject; moreover, such literature as does exist is, to a great extent, scattered in technical journals and reports of various committees and departments.

The present monograph, by such a well known fuel expert as Prof. Bone, forms a very welcome and opportune addition to the literature. An exposition, which can only be described as masterly, is given of the subject, the whole domain being reviewed in a most lucid and interesting manner.

After an introductory chapter on the importance of coal to the nation and Empire and a chapter on the origin of coal, seven chapters are devoted to a study of the chemical composition of coal. These seven chapters are especially worth serious study, not only for the valuable information therein collected, but also because of the author's critical review and comments on the results hitherto obtained. These results are often so contradictory that the non-specialist on the subject is apt to become very confused, but under the guidance of Prof. Bone a clear way is taken through the maze of bewildering facts.

After a chapter on the combustion of coal, follows one dealing with the principles governing combustion and heat transmission to boilers, in which the importance of chemical control is especially emphasized. It is pointed out that only too often these matters are left solely in the hands of engineers, who are certainly not usually well qualified to carry out or supervise chemical analyses or operations.

Chapters on domestic heating and the smoke nuisance follow, and if only the general public could be induced to read them and profit by them, there would soon be a different atmosphere in our large towns. Also, there would be an end to the sale of the quack remedies which are so often advertised for diminishing the rate of consumption of coal.

Five chapters are devoted to carbonization and gasification of coal, and then follow two chapters dealing with fuel economy in the manufacture of iron and steel and in the blast furnace. When all is so good, it is difficult to single out any chapters particularly worthy of mention, but these two should be of especial value to manufacturers and chemists in the industry with which they deal.

A chapter follows on power production from coal; and the last chapter is devoted to surface combustion, being a reprint, with certain addenda, of a discourse by the author before the Royal Institution in February 1914.

The subject dealt with by the author is an extremely intricate one, much of the knowledge at hand being empirical, but the way in which Prof. Bone has treated it cannot be praised too highly. Not only is order brought out of chaos, where it exists, but the way to new advances is pointed out, not only to the manufacturer, but also to the research chemist and engineer.

S. T. P.

*Edible Oils and Fats.* By C. A. Mitchell.  
(6s. 6d. net. Longmans.)

The monograph follows the stereotyped mode of treatment of oils and fats in presenting accounts of their chemical composition and physical properties, brief descriptions of some of the most recent modes for their extraction from natural sources, and a summarized statement of the analytical and physical operations in vogue for their examination.

More detailed treatment is then given of the important edible oils and fats, including the chemical and physical constants by which they are identified.

While these seven short chapters, containing a comprehensive survey of the ground they are intended to cover, furnish a valuable compendium to the specialist in edible oils and fats, it is in succeeding chapters that this mono-

graph establishes the strongest claims to individuality. The manner in which synthetic chemistry has within recent years been applied to the aid of food production is there briefly, but very lucidly, outlined.

A complete bibliography forms a fitting conclusion to a monograph the text of which does not aim at completeness of detail, but simply towards directing the reader to all facts relevant to the subject, and placing at his disposal references which easily enable a more exhaustive account to be obtained as desired.

The style of this monograph is well fitted for the purpose the author set out to attain: incisive, clear, and to the point, enabling a very complete summary to be condensed within the space of 123 pages. Occasionally the condensation may have gone too far; for example, on page 11, reference is made to the melting point of mixtures of fatty acids; and on page 37 it is stated that "the melting point of mixtures of two solid fatty acids affords an approximate estimation of the composition of the mixture." It should be pointed out in this connexion that the two different mixtures may have the same melting point, so that further examination is necessary before even the approximate composition can be ascertained.

S. T. P.

*Colour in Relation to Chemical Constitution.* By E. R. Watson, M.A. Cantab., D.Sc. Lond. (12s. 6d. net. Longmans.)

The timely production and authorship of this important volume guarantees its success. Never before in the history of chemistry has the interest of British chemists and students been so keenly aroused by coloured substances, their production, and the theories advanced to account for their colour. Furthermore, the author of this, the only monograph on the subject in the English language, has already achieved great distinction in connexion with the facts and theories discussed therein. It is not therefore to be wondered at that he has succeeded in making attractive reading of a subject bristling with technicalities.

The book is to some extent based on a course of lectures delivered in the University of Leeds in May 1917, and the picturesque illustrations which are to be found in the text are no doubt the result of this.

In an important introductory chapter are set out the early theories in regard to the relationship between the colour and the chemical constitution of organic colouring matters. These theories, whilst inadequate to explain fully this relationship, are still of enormous importance on account of their practical application. They are even to this day the working rules by which the colour chemist is chiefly guided in his search for new colouring matters, and more especially of dye stuffs, of any required shade.

In the chapters that follow these theories are discussed in detail, and the extent to which they are in agreement with the observed facts is made clear. It is shown how unsatisfactory it is to trust to eye observation alone in attempting to find out the cause of colour. Visible colour is due to absorption bands in the visible part of the spectrum, and it is more satisfactory to study the absorption bands themselves rather than one of the effects of their presence—viz. the physiological sensation of colour. The method of doing this is explained, and many plates, showing the absorption curves of typical organic substances, are reproduced.

Modern theories of colour are fully discussed in the later parts of the book, and the author calls attention to facts which seem to indicate that the colours of inorganic and of organic substances are due to the same cause.

The book contains a most valuable and comprehensive bibliography, arranged under appropriate heads. It is thus at once a volume of first reference and a guide to the only appeal which is, of course, to the original papers themselves. It is a volume which should be accessible to every student and in the possession of every advanced worker and dye chemist.

## THE FRIENDS' PROVIDENT INSTITUTION

for Mutual Life Assurance

(Head Office: Bradford, Yorks)

The Institution having made a special study of Educational requirements, offers advantageous Policies for men and women, which include

**POLICIES COMBINING LIFE ASSURANCE  
AND CAPITAL ON RETIREMENT**

**PENSION SCHEMES FOR SCHOOL STAFFS**

**POLICIES FOR PROVIDING FOR THE  
COST OF THE EDUCATION OF CHILDREN**

Write for particulars of any of these (giving date of birth), to:—

**THE LONDON MANAGER,  
FRIENDS' PROVIDENT INSTITUTION  
17 Gracechurch St., London, E.C. 3.**

**Hygiene.**

*A Health Reader for Girls.* By Agnes L. Stenhouse and E. Stenhouse, B.Sc. (Macmillan.)

If a hygienic way of life can be inculcated by a "Reader," this is a most useful book. It is suited to girls of from twelve to fourteen years of age and deals especially with such essentially feminine interests as the care of infants, the planning of meals, the principles of cookery, and the selection of clothing. The tone of the book is indicated by such sentences as "The greatest enemy of the human race is ill-health"; "It is more dangerous to be a baby in England than a soldier in France."

*A Manual of Personal Hygiene.* By G. D. Bussey. (Ginn.)

An educational Rip van Winkle has awakened and produced a book which reminds us of the old time Catechisms. It includes such things as vitamins and the cocaine habit, and is therefore up to date. Teachers will be able to judge of the quality of the pedagogics of the book by the following:—

Q. What per cent. of the human body is water?

A. Sixty-five per cent. of the human body is water.

Q. How can the cocaine habit be overcome?

A. The remedy is to make it impossible for the victim to obtain the drug.

Q. What is the foundation of hope?

A. Believe in yourself and in a beneficent Creator who has given you not only your existence, but a body provided with every means to resist disease: for in this belief lies your hope in this world and in the future.

We like the author's naive statement that the questions should be so selected and worded that the answers may be brief—to save the teacher's time in correcting! V.

(1) *Fifty Years not Old.* By Eustace Miles. (Presented to Customers at the E.M. Restaurant.) (2) *Economy of Energy.* By Eustace Miles. (5s. net. Sampson Low.)

If cranks are things that make revolutions, here is a crank indeed. The first of these books tells us that the author is not old at fifty, and the secret is that when he begins to feel tired or stale he has a rest or change, he welcomes new ideas, he collects notes, he enjoys his work, and—he laughs! Teachers, take note!

In the larger book the author has expended much energy in telling us how to conserve our own. Let those teachers who are looking forward to their State pension follow such advices as: "Be systematic, optimistic, initiative (*sic*), healthy, honest, and brave, develop a strong will, think and work, and you will have success and reach 100"—and they will be able to enjoy their pension for forty years.

H. V. D.

*The Science of Health and Home-making.*

By E. C. Abbott, M.A. (3s. 6d. net. G. Bell.)

In this book provision is made for a course of instruction suitable for the upper forms of girls' schools on health and home-making, based on scientific principles. The necessary chemistry, physics, and human physiology are introduced successfully. There are a few statements that need revision, notably in the sections dealing with food, germs, and the nutrition of green plants. At the end of every section practical exercises are given, and some problems are propounded. There are no diagrams or pictorial illustrations.

*Food Problems: To illustrate the meaning of Food Waste and what may be Accomplished by Economy and Intelligent Substitution.* By A. N. Farmer and Janet R. Huntington. (Ginn.)

This is a tract for the times, written for American children, to stimulate them to save food and so "win the war." It has become almost obsolete, but teachers may still inculcate in their pupils the necessity and desirability of economy of natural resources. The authors tackle the problems on up-to-date and rational lines.

**Zoology.**

*A Manual of Elementary Zoology.* By L. A. Borradaile, M.A. Second Edition. (16s. net. Joint Committee of Henry Frowde and Hodder & Stoughton.)

This is an excellent manual on traditional lines. Besides corrections, alterations, and smaller additions, the book in its present form contains three new chapters, including one upon some protozoa which are parasitic upon man, notably "Trypanosoma," and one upon "Cyclostomata" and "Reptilia."

While written primarily for students preparing for a preliminary medical or some familiar examination, it provides a comprehensive survey of the animal kingdom and a basis for a thorough training in elementary zoology. Like many manuals, it is liable to give the young student the impression that the subject is a closed, or completed, book. We would like the author to show that the subject is not closed and complete, that research is still proceeding, and, in fact, that even the student may make small investigations during his training. Thus we miss references to recent work in many branches and to investigations which are proceeding.

The appendixes on practical work seem rather too short for students working alone, while for students in a University laboratory they seem unnecessary.

The Table of Classification of the Animal Kingdom, occupying seven pages, should be read in association with Huxley's dictum, which is as valuable now as when he wrote it in 1877, that "the attempt to establish sharply defined large divisions of the animal kingdom is futile . . . each . . . shades off at its margins into some other group." A feature of the book is the large number (more than four hundred) of beautifully clear illustrations. We can confidently recommend the book to the student of the subject.

H. V. D.

**General.**

*Madame Constantia.* By Jefferson Carter. (6s. net. Longmans.)

This is a story of the American Revolution, wherein the hero, Sir Edward Craven, is captured by an American, one Captain Wilmer, who places him on parole. Constantia is Wilmer's daughter, and a pleasant love story centres round her relations with her father's prisoner. Colonel Marion, one of the great figures of the Revolution, is admirably drawn, and the book keeps closely to the records throughout. Indeed it purports to be an authentic record, written by Sir Edward Craven in later life, after he had married Constantia and carried her to England. A capital story for a school library.

*Old Junk.* By H. M. Tomlinson. (4s. 6d. net. Melrose.)

A volume of philosophical travel sketches, written in admirable prose. The title is misleading, suggesting, as it does, some discarded trifles, whereas the essays are full of shrewd observation and pointed comment. In a sketch entitled "The Call" there is a singularly moving description of a shopboy whose native genius is struggling to escape from its cramping surroundings. In lighter vein are "The Voyage of the Mona" and a discourse on Bed Books.

*Tales by Washington Irving.* Edited by Carl van Doren. (3s. 6d. net. Oxford University Press.)

A selection of stories taken from "The Sketch Book," "Bracebridge Hall," "Tales of a Traveller," and "The Alhambra." The editor supplies a useful Introduction, dealing with Irving's style and giving interesting information as to the source of the tales.

*Fairies and Chimneys.* By Rose Fyleman. (3s. 6d. net. Methuen.)

This little collection of pleasing verse has now reached a third edition. Somewhat in the vein of R. L. Stevenson, they are greatly enjoyed in the nursery.

### THREE ITEMS

comprise a remarkably efficient and satisfactory equipment of apparatus for Practical Mathematics and Mechanics, viz.,

## PUBLISHERS' ANNOUNCEMENTS.

THE Cambridge University Press will shortly publish "Stories from Spenser," by Miss Minna Steele Smith. The selections are taken from the first two books of "The Faerie Queene," with a few episodes from Books III and IV. Eight illustrations are included in the book.

ENGLISH IN SCHOOLS.—COMMITTEE TO PROMOTE ITS STUDY.—The President of the Board of Education has appointed a Departmental Committee to inquire into the position occupied by English (language and literature) in the educational system of England, and to advise how its study may best be promoted in schools of all types, including continuation schools, and in Universities and other institutions of higher education, regard being had to (1) the requirements of a liberal education; (2) the needs of business, the professions, and public services; and (3) the relation of English to other studies. The members of the Committee are: Sir Henry John Newbolt, D.Lit. (chairman), Mr. John Cann Bailey, Miss K. M. Baines, Mr. F. S. Boas, LL.D., Miss H. M. Davies, Miss D. Enright, Prof. C. H. Firth, LL.D., Litt.D., Mr. J. H. Fowler, Miss L. A. Lowe, Sir A. T. Quiller Couch, Litt.D., Mr. G. Sampson, Miss C. F. E. Spurgeon, D. Es. L., Dr. G. P. Williams, and Mr. J. Dover Wilson. Mr. J. E. Hales has been appointed Secretary, and all communications should be addressed to him at the Board of Education, Whitehall, London, S.W.1.

SOME BOOKS FOR USE IN  
"ADVANCED COURSES" IN ENGLISH

**A LITERARY MIDDLE ENGLISH READER.**

Edited by A. S. COOK. 554 pages. 8vo. Cloth. 10s. 6d. net.

This book contains selections from nearly 100 middle English classics; the romance, the tale, the chronicle history, the story of travel, the religious poem and didactic treatise, the illustration of life and manners, the translation, the lyric, and the drama being all represented. An introduction and a translation of difficult words at the foot of each page, enable the student to read the selections with facility and appreciation.

**SPECIMENS OF PRE-SHAKESPERIAN DRAMA.**

Edited by J. M. MANLY. Volume I. 655 pages. 7s. 6d. net. Volume II. 590 pages. 7s. 6d. net.

To those students who are making a study of the development of the English drama from the tenth century to the age of Elizabeth, these volumes will prove very useful. A complete list of the plays included in the volumes will be supplied on application.

**SHAKESPEARE: HIS LIFE, ART, AND CHARACTERS.**

With an Historical Sketch of the Origin and Growth of the Drama in England. By H. N. HUDSON, LL.D. 12mo. Cloth. 1,003 pages. (2 volumes.) 17s. 6d. net.

A contribution to Shakespearian criticism which will be of especial value to students.

**THE BEGINNINGS OF THE ENGLISH ROMANTIC MOVEMENT: A Study in Eighteenth Century Literature.**

By W. L. PHELPS. 12mo. Cloth. 192 pages. 6s. net.

This book is a study of the beginnings of English Romanticism between 1725 and 1765. It discusses with abundant references and illustrations the various causes that brought about the transitions of taste from Classicism to Romanticism—such as the Spenserian Revival, the influence of Milton's minor poetry, the love of mediæval life, the revival of ballad literature, &c. To students making a study of the development of English literature, the book will be especially useful.

**LOCI CRITICI: Passages Illustrative of Critical Theory and Practice from Aristotle Downwards.**

Edited with Notes by GEORGE SAINTSBURY. 439 pages. 8s. 6d. net.

A selection of passages from the works of Aristotle, Longinus, Horace, Boethius, Dante, a few Renaissance critics of the formative period and from English critics of the Elizabethan Age and onwards, chosen to illustrate the general drift of criticism in modern Europe.

**A BOOK OF ELIZABETHAN LYRICS.**

Selected and edited by F. C. SCHELLING. 327 pages. 12mo. Cloth. 4s. 6d. net.

An anthology of Elizabethan lyrical poetry containing selections from the works of individual authors, "novels," masques, plays, &c. The selections are given entire, and by preference in the earliest form in which they received the supervision of their authors. Where later versions have been preferred, authority for them is given in the notes. The Introduction includes an essay on the Elizabethan lyric and a consideration of the chief lyrical measures of the age from an organic as well as an historical point of view.

**THE BEST ELIZABETHAN PLAYS.**

Edited by W. R. THAYER. 12mo. Cloth. 611 pages. 6s. 6d. net.

The plays included in this volume are Marlowe's "Jew of Malta," Jonson's "The Alchemist," "Philaster" by Beaumont and Fletcher, "The Two Noble Kinsmen" by Fletcher and Shakespeare, and "The Duchess of Malfi" by Webster. The book contains a valuable explanatory preface, and notes at the foot of each page.

**THE SONNETS OF SHAKESPEARE.**

With an Introduction and Notes by the late H. C. BEECHING, M.A., D.Litt. 212 pages. 3s. 6d. net.

The text adopted in this edition of the sonnets is Malone's revision of the *editio princeps*, the Quarto of 1609. The Introduction and Notes are very full and complete.

**THE ENGLISH NOVEL BEFORE THE NINETEENTH CENTURY.**

Excerpts from Representative Types selected by A. B. HOPKINS and H. S. HUGHES. 794 pages. 10s. 6d. net.

The excerpts included in this volume are chronologically arranged and cover the centuries from Malory to Jane Austen. They have been selected to show the skill of the respective novelists in the handling of plot, scene, character, dialogue, and other technical elements; are comprehensive and offer the student an adequate introduction to the authors concerned. A bibliography of the novel arranged according to periods affords a guide to the necessary critical material.

**AN INTRODUCTION TO THE METHODS AND MATERIALS OF LITERARY CRITICISM.**

By C. M. GAYLEY and F. N. SCOTT. 12mo. Cloth. 587 pages. 7s. 6d. net.

This book discusses The Bases in Aesthetics and Poetics, thus providing a working basis for the critical study of literature as related to art. It includes a bibliography, with critical commentary on each important reference, and suggestions for special investigation.

Catalogue on application.

THE INCORPORATED SOCIETY  
OF MUSICIANS.

Founded 1882. Incorporated 1892.

## OBJECTS OF THE SOCIETY.

The objects for which the Society is established are the promotion of whatever may tend to the elevation of the status, and the improvement of the qualifications, of all Members of the Musical Profession, or may aid the musical education of the people.

## ADVANTAGE OF MEMBERSHIP.

A Benevolent Fund for Members, the Regulations for which have purposely been made as wide as possible in order to meet the many and very varying contingencies which arise from time to time.

An Orphan Fund for the children of musicians, which is open to the dependents of all musicians, whether their parents were members of the Society or not.

Legal advice on all professional matters: Income Tax Claims; Copyright; The Recovery of Fees, &amp;c.

Registers open to members of "Vacant Appointments" and "Engagements," and for the transfer from member to member of pupils moving to new districts.

## LOCAL EXAMINATIONS IN MUSIC.

The examinations of the Society, established in 1884, are carefully arranged in a systematic series of Progressive Grades, embracing a complete course of musical study, and constitute a most valuable guide for Teachers in recording the progress of their pupils.

Full particulars may be obtained upon application to the GENERAL SECRETARY, 19, BERNERS STREET, W. 1

H. J. PURKISS,

The King's School, Grantham.

University of St. Andrews.  
WALKER TRUST.

**PRIZES FOR ESSAYS**

The Walker Trustees invite essays on  
**SPIRITUAL REGENERATION**  
as the Basis of  
**World Reconstruction.**

Sympathising with the present aspirations after a better social and international order, and believing that the realisation of the highest ideals of humanity will depend essentially on an awakening to spiritual truths which will permeate and inspire all thought, the Trustees desire essayists to concentrate their attention primarily on the nature and the necessity of spiritual regeneration, and on the methods by which it may be attained.

The Trustees will welcome from those who do not care to compete for the prizes offered any essays or suggestions likely to prove helpful under this scheme.

In the event of any essayist showing exceptional understanding of the subject and desiring facilities for the furtherance of reconstructive work, the Trustees may, instead of, or in addition to, the prizes offered, provide such facilities as the funds available may allow.

The following prizes are offered for the most widely helpful essays:—

**I. STUDENTS' PRIZES.**—Four separate prizes of £25 each.

**II. WORKERS' PRIZES.**—Four separate prizes of £25 each.

**III. OPEN PRIZE OF £200.**—The Trustees may, at their discretion, make additional awards.

Copies of the notice relating to this Essay Scheme may be had upon application to the Secretary, The Walker Trust, Rothes, Markinch, Fife.

ANDREW BENNETT, Secretary.

The University, St. Andrews.  
JANUARY, 1919.

## PATON'S LIST OF SCHOOLS AND TUTORS.

**An Aid to Parents in the Selection of Schools.**

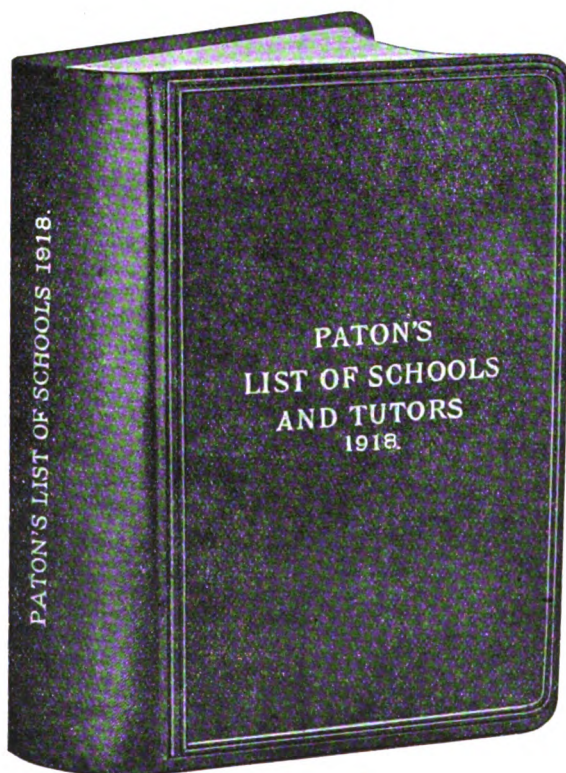

EVERY YEAR THOUSANDS OF PARENTS CONSULT THIS BOOK.

"When I first came here I spent over £50 in six months, advertising in the leading papers—result, one boy. Then I came under your Agency—result, a steady stream of boarders every term, more than filling up the vacancies caused by boys leaving. I have already had to open another dormitory, and am on the point of 'venturing' on another boarding house."

"Please insert my pages as usual. I believe I get more pupils from that than from any other source."

"I enclose a request to have my notice renewed. I would not for anything leave it off now."

"I find it most useful to my patients when seeking information about sending their boys and girls away, and have kept a copy in my waiting-room for some years."

"Two years ago you sent me a pupil named ——. Through her parents I have had four good pupils this year from four different places, and through two of these I have five more coming this term: that is ten pupils from paying one commission."

"I have much pleasure in renewing the advertisement in your excellent Guide, and should like to take the opportunity to express to you my best thanks for the invaluable help of your Agency."

"I enclose order form, duly signed. . . . I am more than grateful for the excellent service your Agency does my school."

## NOTES AND COMMENTS.

### Mr. Fisher for Washington.

At the moment of writing, the newspapers are announcing, with some degree of confidence, that the President of the Board of Education will be transferred to the British Embassy at Washington. The news, if it turns out to be true, will be received with mixed feelings. Everybody must recognise that the Washington Embassy is certain to be a most important centre during the critical years that are coming. The peace and well-being of the whole world demand that the English-speaking nations shall work together to translate into reality the ideals of international goodwill, the preservation of world peace, and the promotion of intellectual fellowship. To aid in this great task nobody is better fitted, by temperament and training, than Mr. Fisher. On another page of this issue will be found a record of the impressions left upon the mind of a distinguished American after an interview with him. It will be noted that the visitor was attracted especially by Mr. Fisher's directness and freedom from official stiffness. These qualities, added to his attainments as a scholar and the sane liberalism of his views, will make him a most acceptable ambassador in the best opinion of America. At the Board of Education his work has been by no means completed, but it is sufficiently advanced to justify the hope that a successor may be found who will carry it through. He must not be a political Minister, however, but an educationist.

### Delayed Pensions.

We hear of several instances in which teachers who are long past the age of sixty, and are still at work, are unable to obtain any satisfactory assurance that they will receive any pension under the new Superannuation Act. It is easy to see that there may be a technical difficulty in regard to a teacher who had passed the retiring age before the Act came into force. One possible interpretation of the measure might be that a human being can be a teacher only between certain ages, just as an insect can be a chrysalis only at a certain stage. The teacher's life history would run: child, youth, teacher, ex-teacher or angel, just as the life history of most insects runs through the stages of egg, grub, chrysalis, imago. Such a reading of an Act passed for the benefit of teachers would be more ingenious than reasonable, and we hope that the Treasury will raise no difficulty about paying superannuation to the relatively small number of teachers who have remained in the work beyond the recently determined pension age. The number of cases is so small and the rate of mortality among teachers over 65 years of age is so high that the public funds will not be seriously depleted if the pensions are paid forthwith. The policy of the Board of Education on pensions has been marked by liberality and freedom from needless fuss over trifles, and this encourages us to believe that the difficulty we have mentioned will be adjusted promptly and generously.

### Equal Pay.

The whole question of salaries is affected by the women's demand for equal pay. It is a demand which must be recognised as essentially just, although in meeting it we shall have to deal with the fact that our social arrangements have hitherto made the man's wages rest on what may be termed a family basis, while the woman's pay has been based on the idea of her individual needs. The discussion of this question has been hampered by the tendency of some of the women advocates of equal pay to import into their observations a note of sour hostility towards men as such. Provocative talk of this kind is having the result of leading the men to form associations in self-defence, and instead of being able to present a reasoned case with the support of all teachers the extremists will find themselves obliged to fight alone in the attempt to convince the public that their claim should be granted at once, even though it is not supported by the main body of teachers. The principle of equal pay could be granted at once in connexion with the establishment of a minimum national scale. All that is required is an arrangement by which extra pay is granted in respect of dependents. This method has the defect of being rigid and likely to place the married man with a family at a grave disadvantage when seeking a post in competition with the unencumbered bachelor. In any event, the number of men teachers is likely to diminish, and since extra pay for dependents is a thing of the remote future, it is probable that school authorities will be driven to solve the question by economising man power, using men less for class teaching and more for directive work.

### The Right to Headmasterships.

In a contemporary educational magazine we note a strongly worded protest against the appointment of Mr. W. H. Fyfe to the post of Head Master of Christ's Hospital. We are told that "it would not be difficult to cite recent examples of the harm done by the selection of men without experience of the life and work of a schoolmaster for the headship of important schools." Governors are told that "they should remember their responsibility to education," and the possible effect on young men of ability of the warning that they should not enter a profession in which the prizes often fall to outsiders. On reading these comments one would imagine that Mr. Fyfe had stepped to the headmaster's desk at Horsham straight from the deck of a man-of-war or from the floor of the Stock Exchange. The truth is that he comes from Merton College, Oxford, where he has been Fellow and Tutor since 1904, and sub-Warden since 1911. For two years before 1904 he was Sixth Form Master at Radley. His attainments as a scholar are beyond dispute, and it is a new doctrine that headmasterships are to be reserved strictly for assistant masters. They ought certainly to be reserved for teachers, but it is contrary to any idea of a united teaching profession to suggest that teachers are to work only along certain appointed grooves. Our contemporary says that physicians do not become great surgeons, or solicitors, judges. These analogies do not help us. It is always possible for a medical or surgical specialist to become a general practitioner or *vice versa*, and more than one solicitor has reached the judge's bench.

### A National Scale of Salaries.

Local Education Authorities are coming to the conclusion that the only way of escape from the difficulties of the salaries question is to have a national scale. The Conference of the Association of Education Committees has passed a resolution in this sense, and already some preliminary approaches towards uniformity have been made by agreement among the authorities of adjoining areas in several parts of the country. It is not easy to understand how a national scale can be worked in practice. Assume that a rate is prescribed for every teacher, regardless of locality, then it would seem certain that teachers would choose Bournemouth rather than the Black Country, or St. Annes rather than St. Helens. In the less desirable districts it would become necessary to offer extra payment, and the so-called national scale would be nothing more than a minimum scale, based on an extension of the principle already adopted by the Board of Education when it ordered last year that no certificated man teacher should be employed at less than £100 a year. It would be possible to carry this order further, and prescribe a minimum salary for each year of service in every grade of teaching with a minimum maximum to be attained after a stated number of years. This device would not give us a national scale, however, since it would leave the authorities free to bargain against each other in the region above the minimum. An approach to a solution of the problem might be found by grading towns and districts according to their character as residential places, the less desirable ones paying salaries above the prescribed minimum as a compensation for local disadvantages. This method would rule out any attempt to form "combines" of local authorities, such as our Primary School Correspondent rightly deprecates.

### Private Schools.

In another part of this issue will be found an article on private schools. Those who are responsible for such schools should be actively engaged in preparing for the consequences of the Education Act and the Teachers' Superannuation Act. It is mere folly to suppose that things will go on as before. These measures are bound to have a far-reaching effect on the private schools. That they will have a fatal effect we do not believe, and in common with all those who care for the best interests of English education, we desire to see a fair field for private enterprise as a check to the development of a universal state school system, with its many dangers, social, political, and educational. It is for the private school teachers to bestir themselves. They should act promptly and together. Unity of purpose is essential, and we commend to the notice of all owners of private schools the plan of affiliation which is being started by the College of Preceptors. The college aims at bringing together all private schools that are doing efficient work. By joint action the teachers in such schools can undoubtedly exert considerable influence on educational administration, especially in regard to the recognition of their schools as part of the national system of education. Applications for affiliation should be addressed to The Secretary, College of Preceptors, Bloomsbury Square, London, W.C. 1.

**" Schematonics."**

This is not the name of a new and powerful drug or explosive, but of a new art, propounded by the "School of Eutrophics." We are told that it aims at "the illustration of music by gesture in a manner never before attempted," the gesture corresponding with "the psychic effect of certain common harmonics ascertained from tables mapped out according to certain philosophical rules." This alluring description means that in practice the schematonicist represents a given note, such as F or D sharp, and the members of the selected team make pretty gestures, presumably appropriate to their allotted notes, so that the whole tone scheme of the music performed by a band and chorus is translated into movement. M. Jaques Dalcroze has accustomed us to the notion of translating musical rhythms into movement, but schematonics goes beyond eurhythmics almost as far as a string quartet goes beyond a triangle. The difference is that while eurhythmics does bring movement to the aid of musical perception, especially in the early stages, schematonics brings movement in at a point where movement conveys little. There is a tendency to exaggerate the interpretative value of movement and to try to accomplish by gesture things that are accomplished more readily and gracefully by other means. We daily expect to hear that some active damsel has been capering to and fro in the belief that she was giving a superb rendering of a sonnet by Keats. From that it will be an easy step to the young lady who will appear on the stage and flop expressively in various directions in order to tell us that her brother has been appointed a junior inspector of schools. Her dancing may be admirable, but her message could be conveyed so much better in words.

---

**NATURE STORIES.**
**The Adage.**

As everyone knows, the sun bet the wind a week's weather that he would make a traveller take off his cloak quicker than the wind could. Then the wind sprang at the man, and blustered and raved and roared, but the man pulled his cloak tighter about him.

When the wind had done, "Now for the gentle persuasion business," said the Sun. He poured his rays upon the traveller till the traveller felt uncomfortably hot.

"Cast not a clout e'er May be out," said the traveller to himself, "and it isn't the first of June till to-morrow."

"What about my week's weather?" asked the Wind triumphantly.

"Oh, take six weeks," said the Sun testily.

Which helps to explain things.

H. McK.

**THE FUTURE OF PRIVATE SCHOOLS.**

BY "SEMIRAMIS OF HAMMERSMITH."

It is now some years since a President of the Board of Education blandly told the House of Commons that he did not know how many private schools there were in England, or how many children attended them, or how many teachers worked in them, or indeed anything about them, save the fact that they existed. This very restricted display of knowledge in regard to an important factor in our national education was received with that stolid calm which has been engendered in our parliamentarians after a long experience of the splendid ignorance of Ministers. It is not unlikely that some members of the House of Commons thought it rather clever and decidedly plucky of the head of the Board of Education to ride off so gallantly on a candid confession of ignorance. It is extremely likely that none of them reflected that the confession related to the schools in which most of their own children were being educated. It is well known, of course, that our statesmen have hitherto shown very little personal faith in our State schools, preferring to send their sons and daughters to institutions which are not state-aided nor even named on the Board's "List of Efficient Secondary Schools."

This last consideration did not serve to prevent the same debonair President from indulging in a cheap gibe against private schools. A reputation for being a "jolly good fellow" has sometimes the disadvantage of making a man determined to be "jolly" even at the expense of good fellowship, and certainly the jest was hardly appropriate from one who had confessed to an abysmal ignorance of private schools. Unfortunately it was in harmony with the general attitude of our educational administrators towards private schools. They have refused to "recognise" them, not only in the official sense of merely ignoring their existence and pretending that they were not there, but also in the manner of the superior lady in the suburbs with a great uncle in the Army. Such high-born dames do not merely ignore their less fortunate neighbours: they sneer at them, administering not only the cut, which is meant to be painful, but the "sniff-cut," which is meant to be deadly.

The present position of secondary education in England makes it impossible to ignore the private schools. Everywhere the State secondary schools are full, and in the aggregate many thousands of children are vainly trying to obtain schooling beyond the primary stage. The State primary schools are also filled to the limit of their capacity, and are confronted moreover with the problem of finding teachers, yet the school attendance laws remain in force, and recent legislation has extended their scope by compelling the full time attendance of all children up to the age of fourteen or over. It is becoming evident that the State machinery for education must either be greatly extended or else break down under its new tasks. Immediate extension is hampered by the difficulty of providing new buildings, recruiting teachers, and dealing with the many questions relating to the new continuation schools.

The plain man would have supposed that under such circumstances great care would have been taken to preserve and encourage every kind of school that could

be regarded as efficient. Had his opinion been invited he would probably have urged that where private persons had launched capital and energy in providing schools their efforts should be recognised for at least as much as they were found to be worth when their work was duly assessed. In other words, he would have suggested that although privately conducted schools do not form part of the state system, they should nevertheless be accepted as part of the national system. If our plain man happened to be a political philosopher he would justify his opinion by reminding us that the nation is a bigger thing than the state, and he would have found examples in recent history of the mischief which ensues when a state system is placed on a pedestal and worshipped as an end in itself, or when official symmetry is mistaken for national well-being.

This attitude would be met by the record of recent legislative and administrative action, including the establishment of advanced courses in selected state secondary schools, the provision that children over 14 are to be exempt from attendance at new continuation schools only when they are shown to be under efficient instruction as defined in the last resort by the Board of Education. Last, and most important of all, would be the fact that while teachers working in state schools are thereby gaining credit for a pension at the age of 60, teachers in non-state schools are excluded from superannuation, however well qualified they may be and however useful to the community their work. The pension, in fact, reaches the teacher *via* the school, and for the young teacher ordinary prudence demands that he shall seek service in a state school and remain there as long as possible. This will affect the private schools in the gravest manner, since it will make it extremely difficult for them to secure teachers. Thus we see that the recent developments of the state system have the effect of imposing on the private schools a two-fold disability; pupils are discouraged from attending them, and teachers are penalised for serving in them. It should be noted, moreover, that these disabilities have been imposed before any enquiry has been made as to the number and efficiency of the schools affected. Official knowledge concerning them has not progressed beyond the ministerial ignorance already described. Apparently it is known that some private schools are not satisfactory. This is enough to bring all private schools under the ban. Your high-born dame does not discriminate. All the "lower orders" are idle and drunken, their wives thriftless, and their daughters difficult to train as parlour-maids. "Take my word for it, Sammy, the poor in a loomp is bad."

Now this temper of mind is unjust, and indeed foolish; unjust because of the manifest unfairness of condemning things and people of which we know little, and foolish because we cannot do without the objects of our condemnation. The private school is a fact; its work goes on and will go on; we cannot dispense with it for the sufficient reason that we have no state machinery to replace it. Under these circumstances what ought to be the future of the private school? In the first place the enquiry prescribed by the Education Act of 1918 ought to be carried out with all possible speed, accompanied or followed speedily by a sympathetic inspection; sympathetic, that is, as distinct from hostile—an inspection made on the assumption that the schools are in fact supplying a need. Some will be found to be

supplying it very inadequately, but it will be unwise to condemn them off-hand. A better course will be to give counsel and suggestions for improvement, always remembering that a small school may be quite good and that teachers may be efficient in practice although their technical qualifications are not very high. These points apply especially to private schools of the primary type, such as are concerned only with pupils under 12 or 13. Even in the state system there are many primary schools which have under fifty pupils, and in the state schools there are some fifty thousand teachers whose qualifications do not rank higher than a University matriculation examination. There ought to be a clear distinction made between private schools of different types. There are private nursery schools, private primary and preparatory schools, and private secondary schools. Each type ought to be efficient for its task, but it is not necessary to demand that every private school shall fulfil the requirements of a fully-equipped secondary school. It is fair to ask that every school shall have a due proportion of its staff well equipped for the work which the school attempts. On the other hand it is fair to offer to teachers working in private schools the same facilities for professional training as are offered to those working in state schools.

We must never forget that private schools are a fact. They exist in spite of official ignorance, and will continue to exist in spite of official neglect. Children attend them, and the public welfare demands that those children shall be taught by teachers who are encouraged by the feeling that they are performing a public service. The future of the private schools depends mainly on the extent to which those who teach in them are made a real part of the teaching service of the country. They should be placed on the same footing as other teachers in respect of opportunities for professional training, for exercising their craft under proper conditions, and for enjoying that measure of public recognition which is implied in an adequate pension. The right and just policy is to regard the national system of education as made up broadly of two elements, state schools and private schools, with perhaps an intermediate class of semi-private schools, such as are controlled directly by bodies of governors. As for the teachers, the conception of a united teaching profession demands that teachers working in private schools shall not be handicapped or penalised. They are ministering to a public demand which the state schools cannot satisfy, and it is grievously unfair to treat them as if they were "in the loomp" unworthy of recognition.

#### Examination for Art Teachers.

The Board of Education give notice that they will hold at approved centres on the 15th July next, at 10-30 a.m. to 1-30 p.m., an examination in the Principles of Teaching and School Management. The examination will be based upon the syllabus published in Appendix C to Rules 109, and will be open to persons who have satisfied the requirements of those rules. As regards paragraph 4 (a) of those rules, unless exempted under paragraph 4 (b), they must have already completed or be completing on or before the 31st July, 1919, an approved course of training in the Principles and Practice of Teaching at an Institution recognised by the Board for the purpose.

Applications to attend the examination must be sent through the Managers of the Institution on the prescribed form (792 T.) so as to reach the Secretary, Board of Education, South Kensington, London, S.W. 7, not later than the 21st June.

A fee of 3s. 6d. will be charged to each candidate for this examination, and must accompany the form of application.

## THE EDUCATION OF BRITISH DEMOCRACY.

### An American View of Mr. Fisher.

BY DR. ALEXANDER IRVINE.

Author of "My Lady of the Chimney Corner."

I SAW two men together in Mr. Fisher's office at Whitehall: The Right Honourable Herbert Fisher, M.P., the British Minister of Education, and Judge Henry Neil, the American Minister of Mothers' Pensions. The American was so astounded at what he heard that he utilised the time in making sure that he had heard aright. The men presented a strange contrast in manner, in physical make-up, and in personality. Mr. Fisher is rather tall, lithe, well-knit, and athletic. The Judge is rotund, heavy, and alert. Mr. Fisher is an Oxford man, but the man is more in evidence than the hall-mark of an institution. His English is plain. There are no secondary sounds, no frills, no affectation either in speech, or manner, or dress; a serious man, possessed of a purpose that works towards its objective as true as the movements of a piston rod. Mr. Fisher sat like a judge. The Judge sat like—well, like a Minister of Education or something.

"What do you mean by education?" asked Mr. Fisher. That was what we went there to find out, and the question was adroitly answered by repeating it.

"Education," repeated the Minister, "is not merely reading, writing, and arithmetic. It is these, but it is infinitely more. It is teaching people how to enjoy leisure." That startled the Judge. There was nothing new in it. I had heard it before, thundered from a soap-box by a proletarian street orator, but to hear it calmly spoken in Whitehall by a Minister of the Crown was something I had not hoped to hear in this incarnation. The Judge could hardly believe his ears, and had it repeated.

"The demand for more leisure becomes more pressing every year," Mr. Fisher continued, "and rightly so. Millions of people get very little out of life. The Greek word for school means leisure. The school, rightly conducted, should be a preparation not merely to earn a living but to get equipment for life in its fulness."

Whatever an American may think of higher education in England, he cannot have a very high opinion of its primary and preparatory stages. England is now struggling with the problem from which America emerged fifty years ago. But there is nothing in the vision of the American educationist higher than the ideal expressed by Mr. Fisher. It stands in strange contrast to the view of popular education held by Lord Salisbury, who tried to kill the Education Bill of 1870 by the declaration "Pass this Bill and you will make England a nation of infidels." A wide gulf yawns between Salisbury and Fisher. Mr. Fisher is an Oxford man who ably represents the new conscience in education. His Children's Charter may not go far enough, but as far as it goes it carries with it the support of the Church, the Lords and the Commons. Better to carry that array of support than to wreck it by going very far ahead of opinion.

"I can work twelve hours a day," he said, in enlarging on the topic, "but I like my work. If I were part of a machine I would probably feel that eight hours constituted a very hard day's work."

"What is the nature of the opposition to your Bill?" I asked.

Here Mr. Fisher was evidently reserved. "There is little specific opposition," he said, "but of course the cotton trades will be affected and will have to make readjustments."

If the cotton trade of England is anything like the cotton trade of the United States, the opposition will be "specific" enough. Gladstone believed in education very much as Dr. Johnson believed in democracy. He believed it was something to be struggled for, and deprecated any interference of the State in the struggle. Dr. Johnson thought democracy was a good thing for everybody except Americans. As a matter of fact, the long procession of Education Bills in England have received their death blow one after another from the hidden hand of business interests. But Mr. Fisher comes into the fight with a backing none of his predecessors possessed. He has the support of the Churches, the Lords, and the Commons; but greater than all these combined is the strong backing of the English people, and that is a factor no Government can afford to ignore.

"How about the feeding of hungry children?" Judge Neil asked.

"The present law is quite adequate for the present," he said; "Wealth has never in the history of England been so equally distributed. I was in a school of 500 scholars the other day, and of that number only 20 took advantage of the free lunch provided. The others preferred to go home, where they probably had a better one."

"Is there any charge made for these luncheons?"

"None whatever."

"I was in a school in Scotland not long ago," Judge Neil said, "and while the luncheon provided was supposed to be free, I noticed that the children were made to feel that they should pay for it—and in fact many of them did."

"You would not find that condition in England," Mr. Fisher replied.

"In the continuation schools, do you foresee any difficulty in carrying out the provisions of the new law? How, for instance, can you prevent employers from arranging night schools, which would involve children working both night and day?" Uncle Remus' recipe for rabbit pie occurred to me: "Fust you catch a nice fat rabbit." No such misgiving seems to be in the mind of the Minister, however, for he answered offhand:

"The Bill provides for 320 hours a year for children over fourteen. Those hours may occupy an hour a day, or a whole day in a week, but no school work will be permitted between 7 p.m. and 8 a.m."

"And it will be left to the local authorities whether they feed the children or not?"

"Yes, that is the situation; there has been very little difficulty in persuading the local authorities in these matters, and I contemplate none in the future."

In looking over the Children's Charter I found an attractive provision in Clause 20.

It provides for children who live at a distance, and who are hampered by exceptional circumstances. In order to give such children equal facilities with the others, the local authorities are empowered to provide board and lodging, either of a temporary or permanent character. This is but one of many features that distinguish the Bill from all its predecessors. It is more democratic, more comprehensive, more far-reaching. It provides

for national oversight, national direction, compulsory attendance, medical inspection, and physical training. It makes it slightly more worth while for teachers who not infrequently compare their salaries with the wages of school janitors. Some of the children who went from school to make shells get more money than the mistresses and masters of the schools they left.

The Bill is not overloaded. It leaves much to be desired. It is a democratic foundation for a national system of education. It hardly touches the curriculum at all. That will have to be dealt with. I know one of the largest schools in England which has not the slightest suggestion in its curriculum about English Literature, nor are any modern ideas of education tolerated there. The children are crammed and drilled to pass examination, without much regard to modern ideas, modern life, or individuality. The reputation of the staff is everything, the life of the children nothing. A teacher coming out of college full of enthusiasm for larger things is frozen into silence before he has been there long. If that is true of a large school in the London area, what must happen in thousands of smaller schools?

"Some opposition has been manifested by local authorities," Neil said. "Do you think it will grow?"

"The Bill naturally necessitates changes all round, but we have carefully considered them all in the light of efficiency. I don't think that local authorities will in any way retard the working of the Bill."

The changes necessitated by the Bill quite measurably affect local school committees. Every committee is an opportunity not only for service more or less useful, but also for social prominence or political power. To take education in any degree out of the hands of amateurs and put it in the hands of experts will invite opposition. In a school not far from London the teachers are in the habit of teaching the children how to make the correct curves in the conventional and reverential curtsy to a titled lady on the board when she visits the school. A new and democratic teacher refused to divert her class from its work for something she imagined England had outgrown. The lady reminded her that her class was the only one in the school that failed to pay "proper respect" when she entered. The teacher politely disputed the lady's right and stood her ground.

This sort of incident may be negligible, but it is a sidelight on the tenacity with which boards will cling to their little prerogatives.

As significant as the Bill itself is the fact that a man of such broad scope and clear vision is firmly seated in the chair of Education. How much Mr. Fisher has been in personal touch with democratic movements I do not know, but that his has not been "the passionate pursuit of passionless knowledge" is abundantly demonstrated in all he does. Whatever the future of the Bill may be, the friends of education may rest assured that the interests of the children of England and Wales are safe in his hands.

He is the embodiment of the new conscience, and of the many new and helpful things that have come out of the cataclysm, as compensation for colossal sacrifices, the Children's Charter and its author are certainly among the best.

"What do you think?" asked my companion, as we went out into the darkness of Parliament Street.

"I think," I replied, "that England is not as hard up for Prime Ministers as I thought she was before I went into that office."

## CAN THESE BONES LIVE?

By DAVID SOMERVELL.

### IV.—English Literature.

As regards this subject, probably the most important of all, achievement has fallen short of aim so hopelessly that we are in danger of forgetting what the aim was. The aim was, and indeed is, to cultivate the taste for abundant, enjoyable, and intelligent reading. I call this the most important of all educational undertakings because this 'English literature teaching' so-called is, or ought to be, the fashioning of an instrument whereby all branches of humane study will be naturally carried on when the vigilance of the school master is over and done with. For it is a great mistake to think of "English Literature" as limited to poetry, belles-lettres, and the more exquisite types of fiction. English literature is the great library of all good books on all subjects.

Now the cultivation of a taste is clearly not a matter for compulsion. We are trying to evoke the "will to read." If you take a class and set them down two hours a week to the detailed study of a classic two centuries old, full of suitable "difficulties," and furnished with even more suitable "notes," you may or may not be doing something sensible, but you are not evoking the will to read. The pastime of studying class-wise, under the eye and amidst the comments of the teacher, a "text with notes" bears no resemblance to the reading of books as ordinarily understood. It resembles nothing so much as the painful though wholesome discipline of deciphering a foreign language. It is in fact an exercise modelled thereon. The explanation of our so-called English literature teaching is that the subject is a new one and it was undertaken in the first instance by the classical masters, who fixed the type of teaching by the only standards familiar to them. Virgil was prepared and conned in minute sections with the aid of Sidgwick; so must Shakespeare be prepared and conned in only slighter larger sections, with the aid of Brown, Jones, and Robinson, or whoever, unknown to me, edit the "school editions" of his plays.

But this is to make English literature a purposeless oppression, easier to do, but for that very reason even less attractive than a foreign language. There is something to be said for the remark attributed to Mr. Balfour when, many years ago, an indignant person pointed out to him that English literature was entirely neglected in our schools. "Well, thank goodness," said Mr. Balfour, "that on that at least the schoolmaster has not yet laid his blighting hand?"

School is the natural and proper place for being taught languages and sciences, for listening to the master and answering his questions, for writing exercises and the like: it is not a natural place for reading, nor is reading naturally done by platoons, but individually. The only value of English literature teaching in school is in its bearing on English literature out of school. At present there seems to be no relation recognised between in school and out of school reading. The phenomena are best studied at a boarding school, because there the out of school arrangements are far more completely within the schoolmaster's control, and therefore within his responsibility.

Take the Libraries. There are two sorts of libraries : the School Library and the House Library. The School Library is often an excellent place within limits. It is apt to be a bit out of date and to represent the tastes and interests of a middle-aged man rather than a young man or a boy ; but still, it will contain a fair assortment of books. Yet it seems hardly ever used as an apparatus of teaching. No masters guide the boys about it ; many of them, to tell the truth, hardly ever enter it. Only the most senior boys are allowed to take books out to read in their houses in the long winter evenings. There is no Boys' Committee to discuss with the librarian the purchase of new books and to learn from him something of the fascination of watching for reviews and publishers' advertisements.

If the School Library is apt to be too high-browed, the House Libraries are mostly frankly Philistine. The tastes of an unregenerate democracy are mainly catered for. A clever boy will perhaps be made librarian : he will want to buy some Meredith, Hardy, Shaw, or perhaps Lowes Dickinson, Graham Wallas, or G. H. D. Cole. As likely as not the House-master will tell him that newspapers, Ian Hay, and Ethel Dell have used up all the money : also somebody has played the fool with the House piano, and that is always repaired out of the Library subs. " Besides," he'll add genially, " nobody in the House but you and Ross, and possibly Johnstone, wants books of that kind." Then he'll slip on his gown and hurry out to give an English Literature lesson.

Now, how are we to proceed ? We are to evoke a taste, and the only way to begin is to base ourselves on such taste as the boys have to begin with. The teaching unit is the form. All the boys in the form have probably different tastes. So they must all read different books. The best plan is to set apart about three periods a week in which the boys simply bring what books they please into school and read away at will. The arrangement is economically sound, and kills two birds with one stone, for that most important educational instrument, the weekly English essay, will only attain its full value when each boy's essay is given from five to twenty minutes' individual attention in a tête-à-tête between boy and master. Thus, during the three reading hours, each boy comes up in turn and has his essay corrected.

I said, let them read any book they please. A little tact, a little judicious scorn, will help to raise the level rapidly, if the boys respect the master. If they don't, of course, nothing is any good. Magazines should no doubt be taboo ; apart from that, the scheme will work much better on the voluntary basis than those who have not tried it could suppose. You will be surprised at the unexpected directions in which good taste shows itself. After all, one of the reasons why boys read mainly the lightest rubbish in their studies is that study life is so disturbed and disturbing. The cloistral calm of the class room with a master who neither talks nor sets a task will work wonders.

Once the scheme has got going, any capable master will develop it on his own lines.

What is the place of " class-work " in English literature teaching ? The golden rule is, only bring into the class room for purposes of reading aloud such works as gain by the procedure. The obvious resource is plays, ancient and modern, Shakespeare, Sheridan, Shaw, and Gilbert Murray's Euripides and the rest. They should be read in parts. The readers should stand up before the class,

observe entries and exits, and (within limits) stage directions. The master disappears to the back of the class room. The King sits at the master's desk ; the Queen sits beside him on the inverted waste-paper basket. The others stand. Possibly your room has a good hiding place for Polonius : mine had, and he used to sneeze or scrape the ground with his feet at the critical point in Act III, Scene I, and thus drive Hamlet from poetry to prose and worse. Choose the best readers for the big parts, and keep them at it. It is not favouritism : boys are not fools, and prefer listening to a good reader. And you can tell them—what is true—that the better the reading, the less time you will have to take up " explaining " between the scenes.

As for lyric poetry, you should read it aloud now and then yourself, unless one or two of your boys reads better than you do.

Repetition ? It is a vexed question. My own view is in favour of it ; but you should set very small amounts—a sonnet or its equivalent is enough for any middle form—and expect it to be known perfectly. Then it will not be a burden overnight nor a horror and a desecration the next morning.

## CHRONICLE OF EDUCATION.

- 15 May.—General Meeting of the British and Foreign School Society.
- 22 May.—Annual Meeting of the Parents' National Education Union. Address by Sir Frederic Kenyon on " The Use and Charm of Museums."
- 28 May.—Educational Conference at Harrod's Stores, Lord Leverhulme presiding. Formation of The Association for the Advancement of Education in Industry and Commerce.
- 29 May.—Address by Mr. Fisher to the above-mentioned Association. Defence of Works Schools, with a plea for broad-minded pioneer work in Continuation Education. They must not take a narrow view of Education. Teachers were required who could train young people in the discipline, duties, and responsibilities of citizens. He believed that a solution of the difficulties between capital and Labour would be found, not in wages alone, but in the improvement of the general atmosphere, due to a spread of knowledge among workers.
- 29 May.—Reception of Czecho-Slovak teachers at the London Day Training College.
- 30 May.—Meeting of the University of London Graduates' Association. Resolution of protest against any attempt to concentrate the University institutions in Bloomsbury.
- Annual Meeting of the Association of Assistant Mistresses at Sheffield, Miss C. L. Lawrie (Cheltenham) presiding.
- 7 June.—Meeting of British Esperanto Congress at Liverpool.
- 9 June.—Conference of Association of Teachers in Technical Institutions at Liverpool.
- 11 June.—Conference of National Association of Head Teachers at Birmingham.
- 13 June.—Conference of Association of Head Mistresses at Birmingham. Miss Reta Oldham, O.B.E., M.A., presiding.

## COMING EVENTS.

- 17 June.—Annual Meeting of the British Science Guild at Goldsmith's College, New Cross, Lord Sydenham presiding. Addresses by Major-General Seely, Sir Joseph J. Thomson, and Sir Robert Hadfield.
- 20 June.—Anniversary Dinner of the College of Preceptors at the Connaught Rooms, Great Queen Street, W.C.2, Sir Philip Magnus, Bart., M.P., President of the College, in the chair.

## SUBJECTS AND METHODS.

### Nursery Schools.

*A Paper read by Miss M. E. Williams (Head Mistress of the Moat Road Council Infants' School, Leicester) to the Leicester Head Teachers' Association.*

At no period in the world's history has the problem of Reconstruction so filled the minds of thinking people as the present. In drawing up his Bill, Mr. Fisher probably had in his mind the great and important part which the next generation will play in Reconstruction—political, social, and moral. To fit the children for the task which lies before them, their school career should not only be improved, it should be extended—at the end by the Continuation School, and at the beginning by the Nursery School.

It is suggested that Nursery Schools should be established for children from two to six years of age, and, although no definition is given it is quite clear that a Nursery School is not intended to be an Elementary School or a part of an Elementary School. Some people are inclined to think that "School" is an unfortunate name, for an ideal Nursery School should be like a home, and not in any way like a school, particularly as regards building and furniture. Some of those which have already been established go by the name of "Free Kindergartens" or "Child Gardens," but, as far as I have been able to discover, there are not at present more than a dozen or so in existence. Perhaps the one which is best known is the one started in Edinburgh by Miss Lilien Hardy in 1906. A full account of this is given in her book, "The Diary of a Free Kinder-Garten."

May I give a short account of a day's work in this free Kinder-Garten. First I might mention that the room taken was an old Mission Hall in a very poor part of the city. There was a piece of waste land outside the back door, but this was covered with all sorts of rubbish. With the help of a few young men this was cleared, and was very soon converted into a very real garden for these slum children, who, as Miss Hardy says, did not even know what grass was. After two years in the Mission Hall a house was taken in a street near by, and the work of the "Child Garden" was carried on there.

At 9-15 a.m. the children assemble. They scrape their shoes, hang up their hats, and a school pinafore is donned. Each child knows its own peg by the picture-postcard pasted above it. They next go to the bath-room for tooth-brushing, and after that they are examined by the District Nurse, who administers emulsion or chemical food when necessary, and inspects the children for symptoms of any infectious disease. During this time they are encouraged to talk about anything which interests them, and, when all are ready, they pass into the main room to sing "Good-morning" greetings.

Next comes "Home Lore," which consists of polishing the brass, giving fresh water to the flowers, feeding the canaries, doves and pigeons, dusting chairs, tidying dolls' cradles, etc. At 10 o'clock they assemble for prayers, and after the roll call all sit down for Nature Talk, Finger Plays, or Picture Books. The children are taught to use their hands in many ways, such as in clay-modelling or sewing, and the older ones learn to read and write when they wish to do so. At 10-15 they have various games and movements, with training in good physical habits.

The special helpers, or monitors, in the meantime spread the table-cloths, and each child is given a little plate and mug, and all sit down to eat their lunch which they brought from home. This affords an opportunity for training in good manners. After lunch, they have free play in the garden, then Kinder-Garten work, followed by dinner, which is provided at a penny a day. This is followed by more play, and when this is over the children all rest on low folding stretchers, each being provided with his own pillow and blanket—out of doors in summer and in a darkened room in winter.

At 3-15 the children are dismissed, but they re-assemble for play at 4-30, and are joined by the old scholars who have been to the Council School. Organised games and little dances hold sway for half the time, and then the children play spontaneously with toys or act simple dramas of their own devising till it is time to go home. In the families which have responded to the influence of the School, bed follows at once, and the day has been well occupied with a minimum of street life and under conditions which cannot fail to be for the betterment of the children.

In London free Kinder-Gartens have been worked on similar lines. Houses of three storeys with the usual basement—and

of course a garden—have been taken, and each accommodates from 40 to 50 children. Here we are still nearer to the home, for the children have the free run of the house. They are quite free to go down to the basement to interview the housekeeper, or up to the dormitories to fix up or put away the small cots in which they sleep every afternoon. In fact, they do this as a part of the day's routine, and are not helped any more than is absolutely necessary.

In Birmingham two free Kinder-Gartens have been in existence for some years. Each is quite small, having only about 20 pupils, who pay a small fee. A trained teacher is in charge, assisted by a young girl, and the work is carried on in a pleasant room with a garden attached.

In Manchester there are Day Nurseries in various districts, and I have heard that it is the intention of the Education Committee to develop the work, so that it is very probable that Nursery Schools will be started before long.

In Bradford they have done much for Infant Welfare, but there are no Nursery Schools at present. It is thought, however, that they will be established and that they will be attached to the Infant Schools. They have already hammocks in some of the babies' rooms, and the children sleep in these for two periods during the day.

It is evident that Nursery Schools are intended to be a link between Infant Welfare work and the Elementary School. When they are established, the attendance should be free and optional. At what age, then, should a child be admitted, and at what age should he pass on to the Elementary School? Miss Margaret Macmillan thinks that the Nursery School age begins at one and ends at seven. It is generally agreed, however, that up to the age of three a child needs not a teacher, but—failing the mother—a nurse, so perhaps the most suitable age for entering would be three.

Again, Miss Macmillan very strongly objects to the child leaving at five. The question is—At what age is a child ready, physically and mentally, for learning to read, to write, and to calculate? Of course it varies very much, but most experts have agreed that it is nearer to the sixth birthday than the fifth, and in some cases it is delayed till towards the seventh. If the children are retained in the Nursery School until they are between five and six, it means that, in time, the Infant Schools, as such, will cease to exist, and will become Junior Schools. It is almost certain, however, that, for the present, no changes will be made in some schools, and that they will continue to work on the same lines. It is in the slum districts that changes should be made first, and naturally they must be to some extent experimental.

Miss Macmillan feels that the ideal Nursery School should not be a strange house, but an annexe of preferably a garden opening on twenty or forty back yards. This might be possible in some districts, but we are concerned with what might be done in Leicester. One has only to pay a visit to one of the schools in any of the poor parts of the town to realise that something should be done for these small children. We know that much has been done for their happiness and comfort during the last few years, for the change in the methods in Infant Schools has been almost revolutionary, but the buildings and furniture remain very nearly the same.

Would it not be possible for three or four houses near the schools to be converted into one by means of doors of communication, and the backyards into a garden? The houses need not be altered if they were thoroughly cleaned, decorated, and provided with furniture suitable for young children—small chairs, tables, cupboards, and cots or hammocks. Or, failing this, are there larger houses standing empty which might be utilised? At one time these were to be seen not far away from some of the poor schools. It has also been suggested that it might be possible to secure a plot in one of the parks, have shelters erected, and start an open-air Nursery School for delicate children.

With these thoughts regarding buildings we will pass on to the staffing of a Nursery School. It is most important that the Head should be a trained and qualified teacher. She may, with her assistants, have charge of 40, 50, 70, or even more children, and, if they are to be happy together, free to develop physically, morally, and mentally, they must be in charge of an expert. The outlook of a Nursery School teacher must be that of an educationist. She must be equipped to deal with the physical care of the children with absolute success and efficiency, but, beyond that, she must know how to deal with the intellectual and spiritual life which is awake and calls for care and wisdom if it is to be fostered and develop fully. It is a healthy body and a healthy mind which constitute the perfect whole. A teacher may be, and often is, a nurse, but a nurse is seldom or

never a teacher ; so it would be quite sufficient if a nurse visited the school each day under the scheme of the School Medical Service, as, of course, the children would be under the supervision of the Medical Officer.

In addition to the head teacher there should be an assistant to every 30 children, with probationers or nurse-teachers to help. These probationers should have a real love for children, be at least seventeen years old, have a certificate of good health and a strong "sense of vocation." The head teacher would train them for a time, and there is little doubt that the Training Colleges will do their part in arranging a special course for Nursery School teachers. There are at present two colleges which are specialising in this work—Gipsy Hill and the Mather Kinder-Garten College.

For the sake of both children and teachers the connection between the Nursery School and the Elementary School should be maintained, and teachers should be able to pass from one to the other. The staff of the existing schools should be drawn upon to supply the need which is coming. There are some teachers now in the Infant Schools whose sympathies lie rather with instructional methods, and these would find their home, not in the Nursery School, but in the Junior School. To others, who wish to realise their own ideals and to foster the unfolding of the child's mind along the lines of its own interests and motives, the call of the Nursery School would come.

Now with regard to the work of the Nursery School. The most important thing is that there should be the right atmosphere, spiritual and moral. The early years of a child's life are the most impressionable, his memory is most tenacious, he is quick to imitate and is constantly forming habits. To direct these aright and to foster their growth should be one of the first aims of the Nursery School, side by side with the care of the physical well-being. There should be free discipline, free choice of pursuits, opportunities for free development on individual lines. There should be no formal lessons and no formal training in reading, writing, or calculating, neither should there be any set standards of proficiency to which the children are expected to attain. Each school should be small enough to give an atmosphere of the happiest kind of family life, and should aim at fostering in the little inmates a love of beauty and order and a keen interest in animals and growing things.

No doubt all are aware that in the Education Bill power is conferred on Education Authorities to aid or provide Nursery Schools for children from two to six years of age, and Mr. Fisher expressed the view that it was a valuable power, and he hoped it would be freely used.

Miss Margaret Macmillan, who, as you know, is an idealist and an authority on the subject, expressed her opinion at the conference on New Ideals in Education in the following words : "Given a really efficient system of Nursery Schools in this country, the whole of the educational and social fabric must feel its influence. For it will be under them a good foundation, a rock that cannot be shaken, a well-spring of sweet and unpolluted life, of living water of humanity that cannot fail."

#### The Secondary School Teachers' War Relief Fund.

The secretary of this fund has issued an urgent appeal for additional support. The invested capital amounts to £6,837, an amount which the actuary's report states to be quite inadequate to provide for the objects of the fund. These include the supplementing of the pensions and allowances of teachers who have served as soldiers, sailors, or nurses, and to provide for the dependents of those who have been disabled or killed on war service. The money is being disbursed with great care, chiefly in emergency grants to cover immediate necessities, in the payment of outstanding obligations after enquiry, in the supplementing of pensions and allowances, in grants to dependents who cannot claim a Government gratuity, and in providing for the education of orphan children.

On present cases alone the sums collected so far show a deficit of £889. Provision is required for new cases, and the Committee ask for a further capital sum of £1,500. Before the Armistice was signed, contributions were received at the rate of £260 a month. Now they have fallen to about £140. We feel confident that when Secondary School Teachers understand that the total amount subscribed to this fund is so far only £8,081, and that by raising this amount to £10,000 they can relieve the distress of the families and children of their former colleagues, there will be no need for further appeals. Subscriptions should be sent at once to the Honorary Treasurer, Mr. J. Hart-Smith, A.R.C.S., The County Secondary School, Battersea, London, S.W. 11.

## BLUE BOOK SUMMARY.

### Report of the Board of Education, 1917-18.

The Report of the Board for the year 1917-18 has been issued. During the year under review there was a net decrease of 13 in the number of ordinary public elementary schools in England, reducing the total to 19,043. These were composed of 7,374 Council schools, with accommodation for 3,879,932, and 11,669 Voluntary schools, with accommodation for 2,633,067, or a total accommodation of 6,512,999. There were 30 higher elementary schools with 7,874 scholars on the register, and 435 special school with accommodation for 32,930. The total number of scholars on January 31 for England was 5,499,832, and the average attendance was 4,782,597.

The total number of efficient secondary schools in England was 1,073, with 242,024 pupils, both schools and pupils showing substantial increases over previous years.

The Report gives an interesting record of the war activities of the schools. In the war savings movement 14,000 elementary schools took part. The record is held in a Welsh county, where 32 schools received subscriptions ranging from £3,000 to £10,000 each. The individual school record, however, belongs to the Midlands, where one school invested £11,217 in War Savings Certificates, an average of over £100 a week. A South Wales school sold 3,000 certificates during "Tank Week," and a school in a South-Eastern county invested £2,105 during the local "War Weapons Week."

In connection with instruction in gardening 806 new gardens were established throughout the country, putting into cultivation some 123 acres.

The efforts of the Board in connection with the systematic collection of blackberries resulted in a substantial contribution to the jam supply of the country. Gloucestershire headed the total with 313 tons of blackberries, while in Buckinghamshire 130 tons were picked; Dorset was responsible for 91 tons; and in Norfolk the children picked 75 tons. In several other counties over 60 tons of fruit were gathered.

In the secondary schools effective help was given towards the organisation of food production, chiefly by the cultivation of potatoes and other vegetable crops, and also in some cases by the keeping of poultry, pigs, rabbits, etc. School holidays were prolonged or readjusted in order to enable the pupils to help in harvesting, haymaking, flax-picking, and fruit gathering.

Special emphasis is laid on the work carried on in technical schools in the training of munition workers, 75 per cent. of whom were women. The Ministry of Munitions have recently estimated that during the last three years about 50,000 persons passed into factories through the various training centres.

### Secondary School Regulations.

The new Regulations for Secondary Schools have been issued. They are identical with those for 1918-19, save that an important alteration is made in the rules concerning the constitution of governing bodies. Hitherto, schools have been ineligible for grants if their scheme required that a majority of the governing body should belong or not belong to any particular religious body, and schools have also been ineligible if the governing body did not include a majority of "representative governors." These restrictions are now removed, and it is now provided that the governing body of the school must contain either a majority of representative governors or have at least one-third of the governing body appointed by the Local Education Authority. This change will probably have far-reaching effects, not only by bringing in such schools as the Woodard Schools, but possibly also in regard to the larger private schools.

### Circular 1112.

Memoranda on Teaching and Organisation in Secondary School (Advanced Courses) is a pamphlet of twelve pages, dealing with the working of Advanced Courses.

### Private Schools Enquiry.

The Board have issued a form of enquiry respecting schools not in receipt of grants. The information asked for is the name and address of the school and a short description, stating the type of education given (elementary, secondary, technical, professional, or other), the number and sex of the pupils, usual age of entry or leaving, whether school is for day pupils or boarders or both, and whether it is conducted for private profit. The names of persons responsible for the management are also required.

## SCHOOLS, COLLEGES, AND UNIVERSITIES.

### Cambridge University.

Dr. Peter Giles, Master of Emanuel College since 1911, has been elected Vice-Chancellor of the University for the academic year which begins on October 1. Dr. Giles, who is an Honorary Fellow of Caius College and Honorary Doctor of Law of Aberdeen University, has been University Reader in Comparative Philology since 1891.

Mr. S. W. Grose and Mr. H. W. C. Vines have been elected to Junior Fellowships at Christ's College. Mr. Grose is engaged on the staff at the Fitzwilliam Museum, and Mr. Vines on the staff of St. Bartholomew's Hospital.

The Council of the Senate propose to the Senate for discussion early in the Michaelmas Term the following Grace:—

"That a syndicate be appointed to consider whether women students should be admitted to membership of the University, and, if so, with what limitations, if any; and alternately to consider, if women students are not admitted to membership, by what means the University could co-operate with the women's colleges or other bodies in the conferment of degrees on women students; and that the syndicate report on both these terms of reference before the end of the Easter Term, 1920."

### Oxford and Rhodes Scholars.

Questions have recently been asked about the scholarships which, under the Rhodes Trust, went to German students. The decision of the trustees to abolish these scholarships was taken in 1916.

Five such scholarships were offered formerly, each worth £250. Four new scholarships of an annual value of £300 were created and distributed as follows—one to the Transvaal, one to the Orange Free State, one to Alberta and Saskatchewan (which had formerly only one between them), and one to Kimberley and Port Elizabeth alternately (Kimberley to select in the first year.)

### Liverpool.—A New Vice-Chancellor.

At a meeting of the Council of Liverpool University on June 3 it was unanimously decided to offer the post of Vice-Chancellor in succession to Sir Alfred Dale, whose resignation takes effect from September 30 next, to Colonel Adami, Professor of Bacteriology and Physiology in the McGill University, Montreal.

### Merthyr Technical College.

Towards the foundation of a Technical College at Merthyr, Mr. H. Seymour Berry, J.P., of Merthyr, has informed the Mayor that he will increase his gift of £10,000 to £20,000. Other large contributions have been received.

### Westfield College, London.

The Council of Westfield College (University of London) has offered a research studentship for next year to an oversea graduate, Miss Julia Grace Wales, A.M.

Miss Wales, who is a Canadian, graduated at McGill University, Montreal, in 1903, obtaining First Rank Honours and the Shakespeare gold medal. In 1904 she obtained a scholarship at Radcliffe College, and took her A.M. degree. In 1910 she was awarded the Mary M. Adams Fellowship in English at Wisconsin University, and in 1912 she was appointed instructor in English at that university.

### University Teachers in London.

The Higher Education sub-Committee of the London County Council is urging that authority to increase its grant for University education by a sum not exceeding £4,100 a year, for the purpose of enabling the salaries of University professorships and readerships paid out of L.C.C. grants to be increased to minima of £800 and £400 respectively, provided that the salaries of the other University professorships and readerships are increased to the same minima by means of an increased grant from the Government.

It is pointed out by the Committee that of the chairs which have been provided by the London County Council, two carry salaries of £500 (augmented to £600 out of University funds), twelve carry salaries of £600, two carry salaries of £800, and three carry salaries of £1,000. The salaries attached to readerships provided by the London County Council are one at £100, three at £200 (augmented out of University funds to £300), and two at £300.

## EDUCATION ABROAD.

### English Studies in Italy.

The Unione Italiana, of Sauciehall Street, Glasgow, has published an interesting and valuable pamphlet from the pen of Dr. Ernesto Grillo, who gives a brief account of the progress and present position of the study of English in Italy. Dr. Grillo states that this study has never been so popular as at present. A visitor among Italian middle-class families is more than likely to find the children practising the English tongue, or trying to imitate English fashions. A young Italian student, noting that nearly all the shops in the Via Tornabuoni in Florence exhibited the sign "English spoken," mischievously placed over a barber's shop the notice "Qui si parla italiano"—"Italian spoken here." A very large number of private schools, clubs, convents, and even the Evangelical Churches, have provided English lessons either free of charge or for a nominal fee. These classes are attended by crowds of men and women during the day, and also in the evening. In order to encourage commercial and literary relations between the two countries, free access to the English departments of the Universities has been granted to all students. In the Technical Institutes English has displaced German as one of the two compulsory modern languages, and in the Commercial Schools special attention is given to English mercantile phraseology and to the commercial, industrial, and social organisation of the British Empire.

In the Licei Moderni, which are high schools of a modern type, established by Professor Credaro while Minister of Education a few years ago, the study of English begins in the fourth form and is continued both theoretically and practically for five years. In the last three years a full summary of English literature is prescribed by the Minister of Education, as well as a study of Addison, Goldsmith, Macaulay, Swift, Thackeray, Dickens, Carlyle, Ruskin, Wordsworth, Coleridge, Longfellow, Milton, Byron, Tennyson, Shakespeare, and Shelley. In November, 1918, eight new professorships of English Language and Literature were founded in the University. The training of teachers is seriously undertaken. Dr. Grillo says: "We in Italy were the first to realise that the time had passed when everyone having a knowledge of a language—native or foreigner—was qualified to teach it. It may be said of course that diplomas are not necessary for able teachers. This is quite true in certain cases; but we must have a guarantee, and this guarantee is the academic career. The legal and medical professions do not allow unqualified men to practise in those professions. Why, then, should schools and universities make an exception in regard to teachers of modern languages?"

### French Teachers and Trade Unions.

Although the French teacher is a civil servant, it is proposed that he should be allowed to join a Trade Union and ally himself with the Labour movement. Similar proposals have been made in England, but so far without receiving much support. It is no question of the teacher's work being more or less valuable to the community than that of an industrial worker. It is rather that a teacher's work is different, and certainly in his case it would be difficult to urge with any degree of plausibility that he was entitled to "a fair share of the products of his labour," inasmuch as he is not producing things at all.

### "The Future."

The English Language Union has adopted as its official organ the journal which bears the title of "The Future," and is edited by Axel Gerfalk and Alfred E. Hayes. The aim of the Union is to foster the study of English in other countries, and Mr. Hayes has succeeded in promoting holiday courses in English for Danish students. These courses began some years ago, and are maintained by the Danish Government at a cost of some £200 a year.

### A Peace Holiday.

The London Education Committee have arranged to extend the summer holidays of elementary school children by one week as a peace holiday.

### Melbourne University.

The Victorian Government is providing £200,000 to enable Melbourne University to complete its buildings.—(Reuter.)

## PRIMARY SCHOOL NOTES.

(FROM OUR OWN CORRESPONDENT.)

THE London teaching service is just now in a state of great unrest. This is bad for education, and if allowed to continue it may be taken for granted the work of the schools will suffer. In the interests of education, therefore, it behoves the London County Council to consider whether the unrest is not due to a want of consideration on its part in respect of the teachers' claims for better pay.

A mass meeting under the auspices of the London Teachers' Association was held at the Kingsway Hall on 24th May, and if what was stated in public represents (as I believe it does) the real position, it is high time the Council set its house in order. At that meeting Mr. W. D. Benthiff gave instances of present payments which certainly prove teachers are being treated badly as compared with the Council's administrative staff. For instance, Mr. Benthiff compared the war bonuses paid to officials with those paid to teachers. A man teacher with a salary of £200 a year before the war now received £269 *including war bonus*, but an official with £200 a year salary, receives £300 a year including war bonus. Similar discrimination against the teacher, varying in proportion to salary, was shown to exist in each of the other typical cases quoted. In times like these, when everyone is urging the importance of education, it is lamentable to find the greatest local education authority in the Kingdom belittling—as far as remuneration is concerned—the value of the educator.

The meeting at Kingsway Hall did excellent service to teachers by making public not only the amount (£39) of the annual war bonus paid to teachers in London, but the actual payments under the new salary scale adopted by the Council in 1918. That scale runs from £120 to £300 for men, and from £108 to £225 for women. The men remain at £120 and the women at £108 for three years from the date of appointment! Also, although the scale has been in force since April, 1918, no man class teacher in London, whatever the length of his service, is getting more than £230. Similarly no woman class teacher is receiving more than £171. Again, the scale gave—on paper—a higher minimum and a higher maximum to headmasters and head mistresses, but as yet very few heads are even getting the *minimum* of the new scale. In this connection Mr. Benthiff made a perfectly correct and much appreciated point when he instanced the case of a headmaster, with thirty-six years of teaching service behind him, who had just reached the *minimum* of his grade. Another point which puts the Council in a bad light is that no increment under the scale is allowed this year. Frankly all this must be altered unless the London service is to remain at the low level to which it has now sunk in the matter of the salaries paid to its teachers. To give an idea of its position I need only state that whereas, after fifteen years' teaching in the metropolis, a man would receive, under the existing scale, £240 a year, he would, had he taken service in Willesden or Hornsey, be receiving £290; and, further, he could have chosen any one of twenty extra-metropolitan authorities where in the fifteenth year of his service his salary would be higher than in London. It is surprising that London teachers have not made their position known before.

It will not be out of place here if I draw attention to a danger threatening the success of the whole movement for better pay. The danger arises from within. It is developing gradually, but surely. It is the growing tendency to a disintegration of the teachers' forces arising from the result of the plebiscites on "equal pay." In London the intensity of feeling is developing very rapidly and is fast hurrying matters to a crisis. An indication of the real position was plainly apparent at the mass meeting on 24th May. It was evident the men were with difficulty held back from offering open opposition to the demands of the L.T.A. Revolt was in the air. Outside the meeting place handbills were distributed announcing a mass meeting of *men* teachers. A national *Schoolmasters' Association* has already been formed, and the London branch has already been established. I am told it is "taking on" immensely. This, I suppose, is an answer to the "London Unit" of the Women's Federation. It is to be hoped it will not act in *opposition* to the N.U.T. and the London Teachers' Association as does the "London Unit." Hitherto the National Federation of Women Teachers has not advised its members to leave the N.U.T., but I am told it is likely to change its attitude in this respect. This disintegration which threatens both the N.U.T. and the L.T.A. can only result in disaster. Is it possible that men and women teachers

have forgotten the history of past triumphs? Working together as an army, united in aims and objects, they have waged successful warfare on obscurantism in high places, on niggardly meanness to the teacher, and on apathy towards the claims of education generally. Warfare is still necessary, and never more necessary than in the field of teachers' interests. It would be the greatest of blunders to weaken the army at this juncture. The taking of a plebiscite on such a debatable question as "equal pay" was a blunder, but to disintegrate would be a greater blunder. Teachers more than others should know that *in war one may not blunder twice*. If success is to follow effort, the effort must be made with closed up ranks.

There is evidence that local education authorities are learning the lesson which teachers seem to be forgetting. In the North of England area there exists a combine of authorities the purpose of which is to fix teachers' salaries for a large district. Competition between one authority and another in the teachers' labour market is thus avoided, and of course the teacher suffers. Strangely enough for a considerable time the teachers recognised the combine and negotiated with it. Its real trend, however, has at last been appreciated, and, led by the teachers of Sunderland, the teachers generally are refusing to have further dealings with the combine. They expect better conditions as a result. London, which hitherto has always thought itself superior to other authorities in the strength of the attraction of its service, and has therefore never consulted any authority, is now feeling its weakness, and is looking round for protection. At its meeting on 28th May, and in answer to a letter from the Walthamstow authority, it indicated its willingness to enter a conference with the education authorities in the Greater London area for the purpose of discussing teachers' salaries! This is indeed a sign of the times and a further warning to teachers not to separate into opposing sections.

The present unrest in the ranks of teachers not only in London but throughout the country is deplorable. It is increasing rather than diminishing, and will do so until the salaries paid are more commensurable with the services rendered. At the same time it is a thousand pities strikes should have become necessary. It is not nice to read "Teachers down canes at Peterborough." Who are to blame for these regrettable developments? I am bound to say the National Union of Teachers cannot be charged as the culprit. It is true there must be two parties to a quarrel. It is also true that where each of the parties is reasonable the quarrel can nearly always be "arranged." The number of instances where the N.U.T. and the local education authority have "arranged" matters prove beyond doubt the sweet reasonableness of the Union's attitude where there has been anything like reciprocity. Conferences between teachers and their employers rarely fail to effect an amicable settlement. It is to be hoped this method of settling matters may become general. A strike of teachers injures education and exerts a far-reaching influence on the minds of children, thereby sowing the seed of future trouble. This is no doubt fully realised by the President of the Board of Education, and may lead to action which neither the local education authorities nor the teachers desire. In the meantime—conferences.

### Oxford Summer School of Education.

The Oxford Summer School of Education will be held between the dates of August 6 and September 2 inclusive. It provides a course of lectures on the teaching of school subjects and on the aims and social bearing of education. In each week lectures are given and conferences held on the detailed methods of special subjects. These subjects are throughout considered with reference to their place in a general scheme of education, and a series of lectures on educational theory and on new experiments in school organisation runs through the course. It is thus equally suited to specialists and to those who wish for an introduction to the scientific study of education.

Entry forms can be procured from the SECRETARY, SECONDARY TRAINING DELEGACY, OLD CLARENDON BUILDING, BROAD ST., OXFORD, and must be sent to him with fee as soon as possible, and in any case before the beginning of the Course. Students should state during which weeks of the Course they propose to attend.

The Director of the School is the University Reader in Education, Dr. W. M. Keatinge, 40, St. Margaret's Road, Oxford, who will be ready to give advice to intending students.

An extremely attractive syllabus of lectures is provided, and the arrangements allow of teachers spending one week in the study of a selected subject.

## PERSONAL NOTES.

**Sir Michael E. Sadler, K.C.S.I.**

Dr. Michael E. Sadler, Vice-Chancellor of the University of Leeds and Chairman of the Teachers Registration Council, has been made a Knight Commander of the Order of the Star of India, in recognition of his work as President of the Calcutta University Commission. This work has been recently completed, and it is expected that the report will be issued at an early date. The members of the Commission have recently returned to England, after a stay in India extending over eighteen months.

**Sir Oliver Lodge.**

With the approval of the Duke of Connaught, President of the Royal Society of Arts, the Council have awarded the Society's Albert Medal for 1919 to Sir Oliver Lodge, D.Sc., F.R.S., "in recognition of his work as the pioneer of wireless telegraphy."

The medal was instituted in 1864 to reward "distinguished service in promoting arts, manufactures, and commerce."

**Mr. Percival Sharp.**

The Sheffield Education Committee has appointed Mr. Percival Sharp, B.Sc., as Director of Education. Mr. Sharp has served as Director in Newcastle-on-Tyne since 1914, when he succeeded Mr. Spurley Hey, now of Manchester. Before going to Newcastle, Mr. Sharp spent seven years in St. Helens as Director of Education. He is a trained teacher, with experience in schools of various types, and his record in educational administration fully justifies his being selected as the first Director of Education for Sheffield.

**Mr. Fred. Wilkinson.**

The Minister of Pensions has appointed Mr. F. Wilkinson, Director of Education at Bolton and Principal of the Municipal Technical School, Hon. Technical Adviser to the Ministry on Questions of Training.

Mr. Wilkinson has been secretary of the Association of Technical Institutions for the last nine years.

**Mr. J. A. Palmer.**

On his retirement from the post of Secretary for Education, Mr. J. A. Palmer was entertained at dinner by Sir George Kenrick, Chairman of the Birmingham Education Committee, who invited the members of the Committee to the gathering. During the evening Mr. Palmer was presented with an illuminated copy of the resolution passed by the Committee on his retirement. The officials in the City Education Office have also made a presentation in the form of a silver tea kettle and salver, with a ring for Mrs. Palmer.

**Mr. R. G. Mayor.**

Congratulations are due to Mr. R. G. Mayor, Principal Assistant Secretary (Universities Branch) of the Board of Education, who has received a C.B. in the latest Honours list. Mr. Mayor has for some time past had special charge of the administration of schemes for the training of teachers, in addition to his duties in connexion with Universities.

**Colonel Adami.**

The post of Vice-Chancellor of the University of Liverpool, about to become vacant by the resignation of Sir Alfred Dale, has been offered to Colonel Adami, Professor of Pathology and Bacteriology in the McGill University, Montreal. Colonel Adami is a Manchester man, educated at Owen's College and Christ's College, Cambridge. He has written a standard work on pathology. His name came into prominence a few years ago, when he delivered the Croonian Lecture at the Royal College of Physicians and treated the problem of heredity in a manner which led to a controversy between him and that doughty antagonist, Sir Ray Lankester. Colonel Adami is an excellent administrator who may be expected to advance the fortunes of Liverpool University.

**Miss Edith Clarke.**

After 44 years' service, Miss Clarke is retiring from the post of Principal of the National Training School of Cookery and Domestic Subjects.

## NEWS ITEMS.

**School Canteens in East Suffolk.**

In November, 1918, the East Suffolk Education Committee established school canteens at various centres. In five months 25,648 dinners were provided at a charge of 3d. for a single dinner, or 1s. for five. A profit of one-eighth of a penny has been made on each dinner sold.

**"Brain Workers."**

At the conference of the Guild of Insurance Officials it was proposed to form a combination of brain-workers on the ground that a joint organisation was necessary if they were to keep a footing in the economic life of the country.

**Esperanto.**

At the annual meeting of the Esperanto Association at Liverpool, on Whit-Monday, it was stated that a petition had been sent to the Peace Conference urging that Esperanto should be made the official language of the League of Nations.

**The Policeman's Lot.**

The Home Secretary has announced that the pay of the London police will begin at £3 10s. a week, or £178 a year. The Departmental Committee on Salaries in Secondary Schools last year suggested that a qualified master in a secondary school should have as salary for the first year at least £150.

**Commercial Men and Teachers.**

The elementary school teachers of Northampton have handed in their resignations, to take effect on June 30. The Council of the Northampton Chamber of Commerce have passed a unanimous resolution urging the Town Council to reconsider the scale of salaries for teachers and to bring it into proper relation both with the present cost of living and the extreme importance of the teachers' work.

**The Barnett School, Hampstead.**

The Middlesex County Council have agreed to make a grant of £20,000 to this High School for Girls. The foundation stone was laid by the Queen last October.

**Public Meetings on Education.**

The Kent Education Committee have arranged a series of public meetings in order to make the Education Act known to the people of the county. Meetings have already been held at various centres. The attendance is excellent, and at Chatham the President of the Board of Education delivered an address to 1,600 people. Great interest is shown in the Act and its future possibilities.

**A Costly Book.**

At Sotheby's a copy of "The Book of Hours," by Jeanne the Second, Queen of Navarre, a 14th century manuscript, was sold for £11,000, the highest price ever paid for a book.

**Latin Teaching.**

The Association for the Reform of Latin Teaching announces a Short Summer Course to be held at Oxford from Sept. 2—9 inclusive. The programme includes demonstration lessons, oral and phonetic practice, lectures, reading classes, a training class, with discussions on methods and an exhibition of archaeological aids. Full particulars may be obtained from Mr. Nigel O. Parry, 4, Church Street, Durham.

**Some Appointments.**

G. H. Hammond, B.A., of Leeds, as Assistant Secretary to the Holland (Lincolnshire) Education Committee.

Mr. Arnold J. Toynbee, B.A., as Koracs Professor of Modern Greek and Byzantine History, Language, and Literature at King's College, London.

Mr. Arthur J. Allmand, D.Sc., as Professor of Chemistry at King's College, London.

Mr. A. E. Richardson, F.R.I.B.A., as Professor of Architecture at University College, London.

Mr. L. R. Strangeways, M.A., Chief Classical Master at Nottingham High School, as Headmaster of Bury Grammar School.

Mr. R. H. Cocks, M.A., of Perin's Grammar School, Alresford as Headmaster of Wool Green County School, Middlesex.

## ASSOCIATION NEWS.

### The Teachers Council.

The number of applications for admission to the Official Register continues to increase. Up to and including Thursday, June 5th, 27,871 teachers had applied. Of these, 8,976 are working in Secondary Schools. The Council has appointed a committee to consider and report on the question of superannuation, with special reference to the position of teachers in schools which are not aided or maintained from public funds.

Mr. A. A. Somerville and Miss E. S. Lees have been re-appointed as representatives upon the Secondary Schools Examinations Council.

### The College of Preceptors.

The anniversary dinner of the College will be held in the Connaught Rooms, Great Queen Street, Kingsway, at 7 p.m., on Friday, June 20th. Sir Philip Magnus, President of the College, will preside, and among those who have accepted invitations to attend are: Lord Morris (High Commissioner for Newfoundland), Sir John Rees, and Mr. W. J. Woolcock, M.P. Tickets for the dinner may be obtained on application to The Secretary, College of Preceptors, Bloomsbury Square, W.C. 1., price 8s. 6d.

In the Supplementary Examination, held on March 4th, 5th, and 6th, certificates were gained by the undermentioned candidates:—*Senior Pass Division*: Halliday, W. (a), Lee, J., Nugent, Miss E. A. (f, ge), Summers, R. D., Taylor, A. L. (e, gm), Van der Pant, F. N. (f, l), Voss, W. A. (ch), White, C. M. (l), Williams, A. L., Winder, W. M. (a); *Junior Honours Division*: Brown, H. W., Cory, J. W. E. (al), Davies, A. B. (a, al, f, phys), Doyle, J. L. C. (al, l), Ellen, Miss J. O. (al, gm), Grantham-Hill, S. (a, al, gm), Lewis, P. C. K. (a, al, l), Smith, C. F. J. (a, f), Wells, H. V. (e, a, al, f); *Junior Pass Division*: Alexander, E. D. (a), Ashkenza, L. (a), Bailey, Miss D. M. (al), Best, B. (a), Boydell, E. L., Browne, B. W., Carless, R. (al), Chester, N. C. (a), Churchill, Miss P. (e, h, f), Clarke, J., Cooper, D. G. (a, al, gm), Crabtree, W. E. (f), Curtis, L. C., Dale, R. L., Darch, L. C., de Freitas, Miss U. (f), de Pinto, L. L. (e, f), Dixon, J. N. (a, al), Dixon, T. F., Docker, Miss B. (f), Dobkin, Miss R., Dunn, Miss J. T., Dunsby, J. (a), Drummond, W. A. D., Edgington, B. (al, gm, ch), Fenton, E. H., Field, R. W., Finch, A. K. J., Fox, C. H. (a, al, f), Gillbard, G. D. (a), Grant, A. J., Gross, G. P. (a, al), Hale-Jones, F. W. (a), Hamblin, A. E., Harris, W. H., Harvey, C. D. A. (a, al), Hayward, S. (a), Herdman, J. H. (a, al), Hill, A. C. (f, l), Hodges, Miss L. E., Howell, Miss E. E. (a, ch), Howells, B. St. J., Imray, Miss I. J. (e), Job, P. L., Jones, S. M. (a), Karnofsky, Miss R., Kent, H., Knowles, W. E., Levi, T., Levy, D. M. (a), Mainprize, Miss E. (a), Martin, H. W. (a, al), Mason, Miss K., Meakin, Miss W. (a), Merifield, J. A. (a), Milner, E. W., Morgan, J. H., Murray, A. L., Netherway, S. M. (al), Norcott, W. B., Norman, Miss J. G. A. (a), Oakeshott, V. E. (a), Pittard, I. B. (f), Pittard, T. J. (a), Pollock, C. (a), Power, R. V. (a), Prosser, Miss A. (a, l), Pugh, E., Ravenscroft, Miss V. M. (a), Richardson, G. K., Robinson, M. (a, al), Roche Borrowes, A. M. (al), Ross, J. A., Short, A. C. (a), Siddle, C. W., Spencer, Miss E. E. (a), Stevenson, W. E., Stuart-Crump, C. F. (a), Taylor, A. C., Trick, Miss K. M. P. (a), Twort, Miss F. A., Twort, Miss L. H., Vaughan-Bradley, J. (a, al), Vernon, H. (h, a), Vignale, O. R., Villarreal, E. F. (l), Walker, T. W. (a), Wardleworth, J., Weiss, Miss L. M., Winstone, C. P. (a), Wood, L. J. (a), Wood, S. (a, al), Woodcock, Miss K. M. (al), Wright, H. W.

*N.B.*—The small italic letters denote distinctions in the following subjects respectively:—a=Arithmetic; ch=Chemistry; f=French; gm=Geometry; l=Latin; al=Algebra; e=English; ge=German; h=History; phys=Physics.

### The British Association.

The British Association for the Advancement of Science will resume its annual meetings next September, at Bournemouth, and those who have only known the Association in pre-war days will find the arrangements different in several important details from those with which they are familiar. The meeting will only last five days instead of the more usual eight, and the social festivities will be considerably curtailed.

The Education Section has prepared a full programme for the meeting. On Tuesday, 9th September, Sir Napier Shaw, F.R.S., will deliver his presidential address at 10 o'clock; the

latter part of the morning being devoted to the consideration of the Free-place System, with especial reference to the question of maintenance grants and the tenure of the free-place holders. In the afternoon a discussion upon the Teaching of English will take place. On Wednesday, 10th September, the morning will be devoted to considering "The Method and Substance of Science Teaching"; several well-known educationists have promised to take part in the discussion, and an interesting debate is expected upon the two reports recently issued by Sir Joseph Thomson's and Sir Richard Gregory's Committees. During the Wednesday afternoon a joint meeting with Section F (Economics) will consider the question of "Education in relation to Business." The future of Continuation Schools is to be discussed on the Thursday morning, and, in view of the changes which the new Education Act will cause in these, this should prove one of the most interesting features of the meeting. For Thursday afternoon an animated debate upon the relation of Humanistic and Scientific Studies is being arranged. It is hoped that Bishop Welldon will be able to open a discussion upon "Training in Citizenship" on Friday morning; and in the afternoon of that day the question of Private Schools will be considered, the latter subject being one of especial interest in towns like Bournemouth.

Communications intended for the Section should be addressed to the Recorder, Mr. Douglas Berridge, The College, Malvern.

### Scottish Teachers in Conference.

A conference of Scottish teachers, held under the auspices of the Educational Institute of Scotland, was opened in Dumfries on Friday, May 16th. Mr. D. MacGillivray, President of the Institute, referred in his inaugural address to the fact that their conference was being opened on the day on which a fresh page in Scottish educational history was being started. No function heralded the coming into power of the new authorities, but tribute was paid to the great part played by the press in educating the public to a higher appreciation of the value of education. As teachers, they were glad to have that opportunity of assuring the new education authorities of their whole-hearted support; teachers recognised the magnitude and complexity of the duties before the authorities. On the other hand, teachers hoped that a much greater measure of freedom and trust should be given them than had been the case in the past.

Mr. G. C. Pringle, M.B.E., M.A., organising secretary of the Institute, followed with an address on the work of the Institute.

On the resumption of the conference on Saturday, the following motion was unanimously adopted: "That, provided adequate salaries are guaranteed to the profession as a whole by the Department's Minimum National Scale, and that the standards of entrance and training are properly maintained, the Institute should co-operate wholeheartedly in the recruiting of teachers to meet the requirements of the Education Act." Mr. Robert Dickson, headmaster of James Clark Technical School, Edinburgh, read a paper on the supply of teachers, in which he urged that to provide teachers for those pupils who would be added to the school population by the raising of the school age and the establishment of day continuation classes, summer schools and other courses in which the training on a University level or post-graduate level in some of the subjects of the school curriculum should be given, should be arranged so that teachers already in the profession might qualify for this higher work.

The other papers read at the conference were "The New Intermediate School," by Mr. John Morrison, executive officer to the Stewartry Education Authority; "The New Continuation School," by Mr. Alexander McCallum, director, Edinburgh and East of Scotland College of Agriculture; and "Adult Education" by Dr. William Boyd, Glasgow University.

Resolutions were adopted that in the new intermediate schools no attempt should be made to give any kind of direct vocational training, and that while in the new continuation schools the cultural studies of the intermediate course should be continued and developed as far as the limited time permits, the main emphasis should be increasingly laid on the vocational interests of the pupils, and special attention given to their training for civic duties by making the schools social and recreative centres on a self-governing basis.

### British Science Guild.

The British Science Guild annual meeting will be held on June 17, at 4 p.m., at the Goldsmiths' Hall. The speakers will include Lord Sydenham (president of the Guild), Major-General Seely, Sir Joseph Thomson, O.M., president of the Royal Society, and Sir Robert Hadfield.

## ROYAL COLLEGE OF SCIENCE.

### OLD STUDENTS' ASSOCIATION.

Mr. T. LI. Humberstone

on

### The Proposed University of Technology.

IN the March number of the EDUCATIONAL TIMES we offered certain criticisms of the proposal to establish in South Kensington a University of Technology. We expressed the opinion that this proposal, though at first sight attractive, was open to several grave objections, geographical and administrative. A statement was published in the May number of THE MINING MAGAZINE to the effect that the Imperial College of Science and Technology is to be given the status of a University.

It should perhaps be explained that the Imperial College is a conglomerate of the Royal College of Science, the Royal School of Mines, and the City and Guilds Engineering College. The first-named traces its origin to the Royal College of Chemistry, founded in 1845, the earliest of our scientific colleges. In 1851 the Government School of Mines and of Science was established in Jermyn Street, London. These two institutions were combined later as the Royal College of Science. When the further amalgamation took place, resulting in the foundation of the present Imperial College, new powers were created under the Royal Charter. The City and Guilds Engineering College retains its close connexion with the City and Guilds of London Institute, its parent institution being governed by a special delegacy and retaining its own Dean.

In view of the possible results of the establishment of a University of Technology, special interest attaches to a statement made by Mr. T. Li. Humberstone, Secretary of the Old Students' Association of the Royal College of Science, at the annual gathering of that body on May 24th.

In the course of his speech Mr. Humberstone said that the general question of the position of the Imperial College in the scheme of higher education in London was too wide for full discussion on that occasion. As an Old Students' Association their special duty was to consider the question from the point of view of their own college, the Royal College of Science, and the interests of its former students. Trouble and discontent had found their first germ in the Report of the Departmental Committee appointed in 1904 by the Board of Education. This report, which was one of the most unsatisfactory documents ever issued by a Government department, furnished the basis of the Royal Charter of the Imperial College, granted in 1907. The report ignored the claims of pure science, and it was only after a strong protest that the word "Science" was made part of the title of the new institution. The same attitude towards pure science was revealed in the constitution of the governing body, which had eight representatives of technical societies and only one from the Royal Society. Under the Charter of the Imperial College the Royal College of Science lost its identity; its diploma and the status of Associates were not recognised; privileges granted to them by the Board of Education were not "saved"; and the Royal College of Science existed—if it did exist—only by the grace of the governing body. In 1907 a number of past and present students of the College petitioned the Board of Education to grant to old students some representation on the governing body, but the request was ignored. It would be well for Mr. Fisher and his advisers to consider the wrongs already suffered by the Royal College of Science before embarking on further difficulties and complications. On the question of a University of Technology the Association had already declared itself in favour of the Imperial College being organised as a Federation of Colleges under a single governing body, each College being controlled by a special committee. It had urged that the Royal College of Science, the Royal School of Mines, and the City and Guilds (Engineering) College should be included in the federation, together with a fourth College, to be

devoted to higher teaching and research in technology. It has suggested that the diploma of Associate of the Royal College of Science should be retained as the premier diploma in pure science given by the federated colleges. Lastly, it had proposed that if and when the Imperial College should be linked more closely with the University of London, the Royal College of Science should, while remaining in the proposed federation, become a "constituent college" of the University in the Faculty of Science. This policy still held the field.

Without attempting to discuss in detail the proposal to set up a University of Technology, they might recall some of the actions of those who were now seeking to obtain a University status for the Imperial College. The authorities of the College began by preparing a foundation stone with an inscription to the effect that the Royal College of Science was henceforward to be known as the Imperial College of Science and Technology. A vigorous protest was entered, and the inscription was altered. Following this the governing body of the Imperial College had gravely depreciated the value of the A.R.C.Sc. diploma by granting it freely for one or two years' work. For purposes of comparison he had analysed the awards for 1907 and 1914. In the former year 41 diplomas were awarded; none on one year's work, three on two years' work, and 38 on three or more years' work. In 1914, 62 diplomas were awarded; 16 on one year's work, 26 on two years, and 20 on three or more years' work. The Imperial College had set up a new diploma with ill-defined conditions and a course of study which overlapped that for the A.R.C.Sc. diploma. In their evidence before the Royal Commission in 1910 and 1911 the representatives of the Imperial College said that their aim was to get rid of the younger students and to convert the College into a post-graduate institution. This policy would practically abolish the Royal College of Science, and one of the Commissioners pointed out that it was contrary to the terms of their Charter. Finally, the course for the diploma in Mechanics had been given up, although the course was regarded by former students as one of the most valuable and characteristic in the Royal College of Science curriculum.

He took the view that there was an obligation upon the Imperial College to co-operate with the University of London, since under the Charter the College became a "School of the University," and he thought that the terms of Mr. Beit's will, bequeathing money to the Imperial College, clearly imposed such an obligation. Instead of co-operation there was apparently a determination to break apart. One regrettable example of this was the attempt to dissuade students of the Imperial College from joining the University of London Officers Training Corps soon after its formation. Year after year the Imperial College had refused to nominate a member of the committee of the Corps. Instead, it had sought and obtained permission to form a Corps of its own, but the Corps had not been formed. This attitude towards the University of London was further exemplified in the procedure whereby the five representatives of the University who are appointed members of the governing body of the Imperial College under the terms of its Charter are rendered practically powerless because the governing body delegates many of its functions to an executive committee on which the University may be virtually unrepresented. This device, he said, was fully explained by Sir Henry Miers in his evidence before the Royal Commission.

The new attempt to create a University of Technology by a press campaign and other forms of propaganda did not deserve to succeed. The fame of a university was built up on the reputation of its teachers for learning, originality, and independence, on their regard for high academic standards, and on the loyalty of its students, past and present. These attributes could be fostered only by a governing body well versed in the principles of academic administration. As a member of the University of London, he would say to those who deplored its apparent inability to frame a great constructive policy that some from whom the University had the right to claim loyal help were working against its interests. The ideal University of London might be difficult to bring into being, but he was convinced that the great task was being hampered by attempts to set up a separate University of Technology. In his view there was no single argument of any weight in favour of the proposal. It involved needless duplication of effort, endless friction, and a great waste of public money. He felt that if Mr. Fisher agreed to the proposal he would be taking a step which would obstruct the ultimate development of a coherent scheme of higher education. Many had hoped for such a scheme, feeling confident that when Mr. Fisher devoted to this important question his rare gifts of intellect and personality, success would be assured.

## LETTERS TO THE EDITOR.

## ARMY SCHOOLS OF EDUCATION.

[We have received the following communication from the War Office. The pamphlet referred to is too long to print, but it is issued with Army Order 7, dated 13th May, 1919.—EDITOR, "EDUCATIONAL TIMES."]

War Office, Whitehall, S.W. 1,  
27th May, 1919.

DEAR SIR,

I send you herewith a memorandum on Army Schemes of Education, and also a pamphlet entitled "Educational Training—Armies of Occupation." You will probably be able to make some use of these in the next issue of your journal.

Yours faithfully,

(Signed) D. CAIRD,  
Director of Publicity.

THE EDITOR,  
"EDUCATIONAL TIMES."

## MEMORANDUM.

The following report of a visit paid by an Inspector of the Board of Education to the two Army Schools of Education has been received.

1. I visited the Oxford Army School of Education on the 19th and 20th March, and the Cambridge School\* on the 1st and 2nd April, and although the time spent in each place was short the excellent facilities offered me for seeing everything that was going on enabled me to get into close touch with the teaching staff. The friendly reception which the tutors and organisers accorded me, and the frank exchange of views, gave me an insight into the spirit and atmosphere of both the Schools which would have been impossible otherwise without a much longer visit.

\* This latter school has now been transferred to Newmarket.

2. The task which the organisers of these schools have set themselves is one of the most difficult in the whole range of educational experience. It is to improvise a course of training, limited to a month, principally for men who have not previously been teachers, whose educational attainments are most diverse, in order that they may undertake the instruction of heterogeneous groups of men in subjects some of which usually tax the powers of highly qualified and experienced teachers.

3. Given the objective and the conditions, the manner in which the problem has been attacked deserves the highest praise. One of the first objects of the course is to cultivate the right pedagogical attitude on the part of the intending teachers towards their future task. A second object is to give some practical instruction in the technique of teaching. (This second object may be combined to some extent with some instruction in the subject matter, or with a certain amount of revision of knowledge previously acquired.)

A third object is a general stimulation of interest in, and the provision of some guidance upon, the most modern phases of such important questions as are known to be occupying the minds of many of the men who will attend the classes in the Army of Occupation or of armies elsewhere.

I do not know that these objects have been defined precisely in this way by the organisers of the schools, but the actual work in each school seems to me to fall into these divisions.

4. The great degree of elasticity which will necessarily be a feature in the army classes makes it relatively more important that the teachers should be alert, and sympathetic towards a variety of minds and characters, than that they should be experts in their "subjects." At any rate, it is clearly impossible to devote much time to learning the subject matter of literature, history, languages, sociology, economics, etc.

A degree of knowledge in one or more of these subjects must be taken for granted; and the intending teachers must be trained to handle their subjects in a manner calculated to stimulate and retain the interest of their classes.

5. With regard to the Oxford School, the task has been made easier by the fact that most of the men have already received a good general education. What proportion are graduates I do not know, but there are many graduates among them, many others who have completed a public school course, and a few who have already been in teaching.

It is therefore possible to devote a fair proportion of time definitely to the technique of teaching, to give a regular course of lectures in pedagogical method, and to stimulate interest in current topics of importance through the more general lectures and discussions.

The arrangement of the different courses for the various groups is thus rather simpler than at Cambridge, and seems excellently devised.

6. Speaking first of what I call the cultivation of the right pedagogical attitude, it is evident that this has been conceived in a broad and liberal spirit. The tutors are aware that mere technical instruction will be only one part of the work of the teachers; the ability to establish contact with live minds will be a much greater test of success. The effect of this part of the course at Oxford can hardly fail to be of great service in conveying a new conception of the functions of the teacher, and in enabling many to face their task with greater intelligence and confidence. I am told that some of the men who have previously been teachers have acknowledged the benefit they have derived in gaining a wider and more complex grasp of certain aspects of teaching which they had scarcely been aware of previously. Previous good general education must be presupposed, however, if the men are to derive the maximum benefit from this part of the course.

7. Actual practice in teaching (or in giving demonstrations of a kind similar to what is demanded in teaching) is more in evidence in the Oxford School than at Cambridge. This is made possible by the circumstances already alluded to, viz., that more of the men start with a considerable knowledge of their "subjects," or with a more advanced general education. Such of the practice lessons as I saw were admirably conducted. The School has been fortunate in securing several tutors who have had considerable experience as teachers and possess just the right gifts for practical training.

Incidentally, some of the lectures which do not form part of the "practical" division of the course serve as models of good lecturing; and no doubt will unconsciously influence the men in the acquisition of good style.

8. At Oxford the lectures and discussions in connection with the subject called Citizenship, or "Civics," provide the chief opportunity for stimulating interest in current topics of importance. Apart from these, the opportunities for discussion are somewhat limited; although the methods by which most of the subjects of the course are taught involve some discussion. There is reason to think that the methods of the Tutorial Class movement have affected, and affected beneficially, those adopted in conducting these courses, and consequently will affect the methods which will be adopted by the teachers when they begin their work. The pedagogical problem of adult education cannot be solved by any one method, but so much has been contributed by the Tutorial Class movement that it would be folly to disregard it, or indeed neglect to give it the fullest attention; and it is a matter for congratulation that the School has profited much by the adoption of many of the ideas underlying the Tutorial Class method, and by its spirit.

9. The School at Cambridge has been organised on lines very similar, although it has had an independent and earlier origin. The chief differences are to be found in the different emphasis laid upon the three main features of the aims of the Schools as defined in paragraph 3. It is remarkable that whilst each school has been organised independently, with little communication between the two, the general conception and the main features of the organisation should be so similar. For example, the cultivation of the appropriate attitude of mind towards the general problem of adult education, under the conditions anticipated in the army schools, by means of lectures and discussions for the whole of the men, in conjunction with the divisions into groups for the more specialised training, is not only common to both schools, but the spirit and methods in each are more similar than might have been expected.

10. At Cambridge, however, the lectures to the whole of the men are less definitely devoted to what in the Oxford School

is called "Method," but is actually something wider than "Method," and approaches more to a general treatment of pedagogical theory. The general lectures at Cambridge include a certain amount of "method" or "pedagogical theory," but range over a greater variety of topics. On the other hand, whilst at Oxford all the men attend a general course of lectures in Civics (as distinct from the same specialised group work in that subject), at Cambridge, Civics is one of the group subjects. The difference is less in practice than would appear from the time table, seeing that among the general lectures and discussions for all the men, are many which belong to the subject of "Civics."

11. Again, at Cambridge there is rather less actual practice in teaching than at Oxford. This is partly accounted for by the difference in the previous education and experience of the men (see paragraph 5). I understand that at Cambridge more opportunities for practice are provided in the later weeks of the course, and therefore if the period of the course were extended to six weeks the difference between the two schools in this respect would virtually disappear, seeing that the Cambridge men put in a larger total of hours per week than the Oxford men, and would thus probably get as much time for teaching practice as at Oxford.

12. Perhaps the most noticeable difference is in the larger amount of discussion at Cambridge. Not only are the lectures conducted in a way which permits of freer intercourse between the tutors and the men, but more opportunities for formal discussion are provided. The range of subjects touched upon in the course of the month's training is greater at Cambridge. It is here that greater stress appears to be laid on the cultivation of a general spirit of alertness which will be serviceable in enabling the future teachers to find points of contact with the men who will form their classes. At the same time it has its drawbacks if it tempts the teachers to embark upon teaching, or even leading discussions upon, topics which require deep knowledge to handle successfully. It is possible, although I say this with great hesitation, that the example of the method of the tutorial class may mislead some of the teachers.

In the hands of a master the method is highly successful, and to the onlooker seems easy; but it is full of pitfalls for the unwary, and unless the teacher in charge is deeply versed in his subject may easily tend to the encouragement of discussion which is futile by reason of the lack of a basis of fact. The discussions I heard at Cambridge were more lively than those I heard at Oxford; but I think the men at Oxford were more critical of generalisations and statements resting on loose bases.

13. I feel very diffident about making suggestions, because of my brief acquaintance with both schools and because the organisers in both cases have done their work so remarkably well that they may reasonably regard suggestions from an outsider as impertinent.

I offer the following merely for consideration in the light of the greater knowledge which those more closely acquainted with the conditions can supply.

The Cambridge men appear to work on the average an hour a day more than the Oxford men. It might be possible, therefore, for the Oxford school to provide rather more opportunities for discussions in subjects related to those which will be likely to be handled in the army classes, without curtailing the time now very usefully spent in the main course. On the other hand, at Cambridge it may be expedient to substitute a little more definite teaching for some of the more informal discussions. For example, it may be possible to lengthen the period of some of the lectures combined with discussions, so as to give a better opportunity for both the lecturer and the students. (As a rule, where the lecture and discussion combined occupy less than 1½ hours, there is a tendency for the treatment of the subject to be rather scrappy.)

14. If the course could be lengthened to six weeks there would be a considerable gain; particularly, I think, at Cambridge owing to the fact that many of the men cannot profitably begin their teaching practice until some time after the opening of the course. Also, if the selection of the men were made so as to secure a larger proportion of men with more advanced general education the task of the tutors in the Cambridge School would be made rather easier.

15. I cannot close without a word as to the excellent spirit that prevails in both schools. The men are very keen. If any discrimination is possible, I should say that the men at Cambridge are even more in earnest about equipping themselves and profiting by every facility offered them, than at Oxford. But it speaks volumes for the tact and skill and judgment of the organisers and tutors in handling men that they have inspired and maintained their enthusiasm to a degree which impresses even a casual visitor.

## SUMMER SCHOOLS, 1919.

*For the convenience of our readers we append a brief list of the Summer Schools arranged for this year. Full particulars concerning many of them may be found in our issue of last month, but a few additional Schools are now included.*

**Aberystwyth University College.**—Summer School in Geography, July 29—Aug. 15.

**Barry Summer School.**—July 28—Aug. 23.

**Board of Education.**

(a) Courses for Secondary School Teachers at various centres during August.

(b) Courses in Physical Training at Barry and Scarborough.

**Caen, Normandy.**—Course in French, July 3—Aug. 30.

**Cambridge Psychological Laboratory.**—Industrial Problems, July 13—19, and July 20—26.

**Civic and Moral Education League and Eugenics Education Society.**—Course in Civics and Eugenics at Cambridge, Aug. 2—10.

**Crewe Training College.**—Regional Survey of Snowdonia, July 30—Aug. 13, at Llanberis.

**Dalcroze Eurhythmics.**—Course at Oxford, Aug. 4—10.

**Educational Handwork Association.**—Scarborough, Falmouth and St. Annes-on-Sea, July 28—Aug. 23.

**Folk Dance Society.**—Folk Song and Dances at Stratford-on-Avon, July 26—Aug. 23.

**Froebel Society, and Junior Schools Association.**—Westfield College, Hampstead, July 31—Aug. 16.

**Grenoble.**—Course in French, July 1—Oct. 31.

**Italian School.**—At Girton College, Cambridge, July 28—Aug. 16.

**Latin Teaching.**—Short Course at Oxford, Sept. 2—9, arranged by the Association for the Reform of Latin Teaching.

**Oxford Secondary Training Delegacy.**—St. John's College, Oxford, August 6—Sept. 2, Courses for one week or more arranged.

**Oxford Summer Meeting.**—Course on The British Commonwealth, August 1—14.

**St. Andrews Provincial Committee.**—Course on Methods of Froebel and Montessori.

**Speech Training.**—Course at Stratford-on-Avon, Aug. 1—16.

**Teachers' Guild.**—Course in French and Spanish at Oxford, Aug. 13—20.

**Tonic Sol-fa College.**—College Buildings, Earlham Hall, Forest Gate, London, E., July 22—Aug. 14.

**University College, London.**—Course in French Phonetics and in Methods of Language Learning, Aug. 6—19.

**Uplands Association.**—Summer Meeting at Werneth Low, Hyde, July 30—Aug. 16.

**West Riding County Council.**—Course for West Riding Teachers at Bingley, Aug. 6—22.

**Woodbrooke Settlement.**—Summer School in History, arranged by Mr. F. S. Marvin, Aug. 1—11.

## THE INCORPORATED FROEBEL EDUCATIONAL INSTITUTE,

Colet Gardens, Talgarth Road,  
West Kensington, London, W. 14.

President: RIGHT HON. SIR W. MATHER, LL.D.  
Chairman and Treasurer: MR. C. G. MONTEPIRE, M.A.  
Secretary: MR. ARTHUR G. SYMONDS, M.A.

### TRAINING COLLEGE FOR TEACHERS.

Principal: MISS E. LAWRENCE.

Students are trained for the Examinations of the National Froebel Union and other Examinations.

Prospectuses and all particulars as to Scholarships and Loan Fund may be obtained from the PRINCIPAL.

# SELECTED FROM MR. EDWARD ARNOLD'S LIST.

- Selections from English Literature.** Edited by ELIZABETH LEE. In four books, carefully graduated. Illustrated. Books I and II, each 256 pages, 2s. 6d. Books III and IV, each 320 pages, 3s.
- Selected Essays from English Literature.** Edited with Introduction and Brief Notes by ELIZABETH LEE. 2s. 6d. The Essayists drawn upon include: Bacon, Cowley, Steele, Addison, Fielding, Johnson, Goldsmith, Lamb, Hazlitt, De Quincey, Leigh Hunt, Mitford, Thackeray, and Carlyle.
- Epochs of English Literature.** By J. C. STOBART, M.A., formerly Lecturer in Ancient History at Trinity College, Cambridge. In 9 vols., 2s. 6d. each. Vol. I, The Chaucer Epoch, 1215-1500. Vol. II, The Spenser Epoch, 1500-1600. Vol. III, The Shakespeare Epoch, 1600-1625. Vol. IV, The Milton Epoch, 1625-1674. Vol. V, The Dryden Epoch, 1660-1700. Vol. VI, The Pope Epoch, 1700-1750. Vol. VII, The Johnson Epoch, 1742-1798. Vol. VIII, The Wordsworth Epoch, 1798-1830. Vol. IX, The Tennyson Epoch, 1830 to present day.
- English Narrative Poems.** With an Introduction by Sir HENRY NEWBOLT, D.Litt. 2s. 6d.
- Laureata and The Poet's Realm.** Two famous collections of Poetry for Schools. 2s. 3d. each Vol.
- Arnold's Junior English Composition.** 1s. 8d.
- Kenny's Composition from English Models.** Book I, 1s. 8d. Book II, 2s. 6d.
- Kenny's Exercises in Composition.** I-III, 5d. each.
- Exercises for Parsing in Colour.** By E. HASTINGS. 160 pages, with Chart in Colours. 2s. 6d. Also in Three Parts, each containing Colour Chart, 8d. each.
- Arnold's Junior English Grammar.** 2s.
- Essay Writing.** By G. KENDALL, M.A. 2s. 6d.
- Precis Writing and Reproduction.** By W. J. GRIFFITH, M.A. 3s.
- English Verse Composition.** By A. E. ROBERTS, M.A., and A. PRATT, B.A. 3s.
- A Social and Industrial History of England.** By F. W. TICKNER, D.Lit., M.A., B.Sc. (Econ.) London. Illustrated. 7s. 6d. Also in Three Parts, 3s. each.
- A History of England.** By Prof. C. W. OMAN, M.P. 760 pages, 7s. 6d. In Two Parts, 4s. 6d. each: Part I, from the Earliest Times to 1603; Part II, from 1603 to 1902. In Three Divisions: Division I, to 1307, 2s. 6d.; Division II, 1307 to 1688, 3s. 6d.; Division III, 1688 to 1902, 4s.
- A Junior History of England.** By C. W. OMAN, M.P., and MARY OMAN. 3s. 6d.
- Arnold's Florin English History.** By C. E. M. HAWKESWORTH, M.A. 2s.
- Outlines of European History, 1814-1914.** By G. BURRELL SMITH, M.A., Assistant Master at the Royal Naval College, Dartmouth. With Maps. 3s. 6d.
- Scenes from European History.** By G. B. SMITH, M.A. 2s. 6d.
- The Last Century in Europe, 1814-1910.** By C. E. M. HAWKESWORTH. 7s. 6d. net.
- A General History of the World.** By OSCAR BROWNING. 700 pages. 7s. 6d. net. Also in Three Parts with separate indexes, 3s. 6d. net each. Part I, Ancient History; Part II, Mediæval History; Part III, Modern History.
- The Ancient World.** An Historical Sketch. By C. DU PONTET, M.A., Assistant Master at Harrow School. With Maps, 6s.
- The Days of Alkibiades.** By C. E. ROBINSON, M.A., Assistant Master at Winchester College. With a Foreword by Prof. C. W. OMAN. Illustrated. 6s. net.
- Jerusalem under the High Priests.** By EDWYN ROBERT BEVAN, M.A. Demy 8vo. 7s. 6d.
- A Class Book of Geography.** By A. W. ANDREWS, M.A., F.R.G.S. Cloth, 7s. 6d. A systematic text-book for Upper Forms, based on the study of Physical features. Interesting Original Diagrams are freely employed.
- Arnold's Junior Geography.** By W. M. CAREY, M.A., B.Sc. Cloth, 1s. 8d.
- Outlines of Physiography.** By the late Prof. A. J. HERBERTSON. Fully illustrated. 4s.
- First Lessons in French.** By M. Baguley. Illustrated.
- Arnold's Modern French Course.** By H. L. HUTTON, M.A. Book I, 2s. 6d. Book II, 3s.
- Arnold's Lectures Francaises.** Illustrated. Book I, 2s.; Books II-IV, 2s. 6d. each.
- Grammaire Francaise.** A l'Usage des Anglais. Par E. RENAULT, Officier d'Académie; Lecturer in French at the University of Liverpool. 5s.
- Petite Grammaire Francaise.** By E. RENAULT. 2s.
- Exercises in French Grammar.** By E. RENAULT. 2s.
- Junior French Reader.** By E. RENAULT. 2s.
- French a la Francaise.** By Lady BELL and Mrs. TREVELYAN. Cleverly illustrated. Book I, 10d.; II and III, 1s. each.
- French without Tears.** By Lady BELL. Illustrated. Book I, 10d.; II, 1s.; III, 1s. 3d.
- Arnold's Modern German Course.** By Dr. F. W. WILSON. 3s. 6d.
- First German Prose Composition.** By Dr. F. W. WILSON. 2s.
- Second German Prose Composition.** By Dr. F. W. WILSON.
- Free Composition in German.** By Dr. F. W. WILSON. 1s. 6d.
- The Inductive Arithmetic.** By E. SANKEY. Pupils' Books, I-III, 4d. each; IV, V, VII, VI, 6d. each. Class Teachers' Books, with Answers, Notes on Method, and Oral Exercises. Books I and II, 1s. 6d. each; IV-VII, 2s. each
- A School Arithmetic.** By A. C. JONES, Ph. D., and P. H. WYKES, M.A. 5s. 6d. Parts I-III, 2s. 6d. each.
- Exercises in Arithmetic.** By C. M. TAYLOR. Parts I-III, 1s. 6d. each, without Answers; 2s. each, with Answers.
- Easy Arithmetic and Accounts.** By E. SANKEY and G. A. LORD. Books I and II, 1s. 6d. each.
- Elements of Geometry.** By Dr. R. LACHLAN and W. C. FLETCHER, H.M.I. 3s. 6d.
- Practical Trigonometry.** By H. C. PLAYNE, M.A., and R. C. FAWDRY, M.A. 3s.
- A Text Book of Physics.** By R. S. WILLOWS, M.A., D.Sc. Second Edition. 9s. net. Written up to the standard required for the Intermediate Examinations of the Universities and for the Civil Service Commission.
- Introduction to Practical Physics.** By E. H. BARTON and T. P. BLACK. 5s.
- Mechanics.** By W. D. EDGAR, M.A. 4s.
- Light.** By W. H. TOPHAM, B.Sc., Head of the Army Class, Repton. Cloth. 3s.
- Introduction to Magnetism and Electricity.** By E. W. E. KEMPSON, Senior Physics Master at Rugby School. 3s. 6d.
- Electricity and Magnetism.** By C. E. ASHFORD, M.A., Headmaster of the Royal Naval College, Dartmouth. 4s. 6d.
- Inorganic Chemistry for Schools.** By W. M. HOOTON, M.A. 5s.
- Elements of Inorganic Chemistry.** By the late W. A. SHENSTONE, F.R.S. 6s. 6d.
- Outlines of Inorganic Chemistry.** By Dr. E. B. LUDLAM. 5s.
- A Manual of Human Physiology.** By LEONARD HILL, M.B., F.R.S., Director, Department of Applied Physiology and Hygiene Medical Research Committee. With 173 Illustrations. 7s. 6d.
- Physiology for Beginners.** By LEONARD HILL, M.B., F.R.S. Cloth. 1s. 6d.

London: EDWARD ARNOLD, 41 and 43, Maddox Street, W.1.

# RECENT and STANDARD TEXT-BOOKS

## ENGLISH.

**Mason's New English Grammars.** Revised, in accordance with modern requirements, by A. J. ASHTON, M.A.  
**Junior.** 8th Edition. **1s. 9d.** **Intermediate.** 5th Edition. **2s. 6d.**  
**Senior.** 5th Edition. **3s. 6d.**

**Aids to the Writing of English Composition.** By FRED W. BEWSHER, B.A., Assistant Master at St. Paul's School. Crown 8vo. 3rd Edition. **1s. 6d.** net.

**Exercises in English.** By FRED W. BEWSHER, B.A. Crown 8vo. 3rd Edition. **1s. 6d.** net.

**English Composition.** By R. S. BATE, M.A. Crown 8vo. **4s. 6d.**

"It contains a wealth of quotation and illustration, and is a sound and useful manual covering the ground in detail."—THE TIMES.

**A Practical Course in English.** By E. J. BALLEY, B.A., Whitgift Grammar School, Croydon. Crown 8vo. 4th Edition. **2s.**

**Bell's Shakespeare for Schools.** Edited by S. P. B. MAIS, M.A., Assistant Master at Tonbridge School. Pott 8vo. With numerous illustrations by the late BYAM SHAW. Sixteen Vols. now ready. **1s. 6d.** ea.

**An Outline History of English Literature.** By W. H. HUDSON, late Staff Lecturer in English Literature to the Extension Board, London University. Crown 8vo. 6th Edition. **3s. 6d.** net.

**Representative Passages from English Literature.** A companion volume to the above. Crown 8vo. 2nd Edition. **3s.** net.

**A Short History of English Literature in the Nineteenth Century.** By W. H. HUDSON. Crown 8vo. **3s.** net.

**Essay Writing.** By B. L. K. HENDERSON, D.Lit., F.R. HISL.S., and ARNOLD FREEMAN, M.A., B.Lit. With a Preface by ALBERT MANSBRIDGE. Fcap. 8vo. **1s. 6d.** net.

**A History of the English Language.** By T. R. LOUNSBURY, Professor in Yale University. New Edition revised. Crown 8vo. **6s.** net.

**An Introduction to English Literature.** By H. S. PANCOAST. 4th Edition enlarged. Crown 8vo. **7s. 6d.** net.

**Present-Day Precise.** By A. W. READY, B.A., Army and University Tutor, formerly Scholar of Wadham College, Oxford. An entirely New Edition, rewritten to fit present requirements. Crown 8vo. **2s. 6d.**

**Essays and Essay Writing.** By A. W. READY, B.A. 8th Edition. Crown 8vo. **3s. 6d.** net.

**Matriculation Precise.** By S. E. WINBOLT, M.A., Christ's Hospital. 3rd Edition. Crown 8vo. **1s. 3d.** net. KEY separately, **6d.** net.

## FRENCH. *New Readers.*

**Contes pour les Commencants.** By Mrs. C. M. NESBITT. Printed in large clear type. Illustrated. With full Vocabulary. **1s. 6d.** net.

**Easiest French Reader.** By MARC CEPPI, Whitgift School, Croydon. Fully illustrated. With or without Vocabulary. **1s. 6d.** net.  
 "... educationally sound. . . These little sketches are full of interest."—TIMES EDUCATIONAL SUPPLEMENT.

**Nouveaux Recits Heroiques.** Fully Illustrated. With or without Vocabulary. **1s. 9d.** net.

Fresh stories from "Les Livres Roses," containing Les Canadiens Heroiques, Les Enfants Heroiques de 1914, and La Guerre des Tanks.  
 "There is no doubt that these tales will be read with absorbed interest by all the children who are at all capable of doing so. The last story, 'La Mort du Tank,' is exciting enough for any guide, scout, or cadet."—TIMES EDUCATIONAL SUPPLEMENT.

**Recits Heroiques.** By CHARLES GUYON, Inspecteur d'Académie Honoraire. Edited, with Questionnaire and Vocabulary, by MARC CEPPI. Illustrated. 5th Edition. **1s. 9d.** net.  
 Contains stories dealing with "La Guerre dans les Ais," "La Guerre sur Mer," and "Nos amis les Anglais."

**C'est la Guerre!** Stories of the Great War. By MARC CEPPI. Illustrated. With or without Vocabulary. 7th Edition. **1s. 6d.** net.

**Flips et Compagnie.** By MARC CEPPI. Illustrated stories of Annual Life. With or without Vocabulary and Questionnaire. Crown 8vo. **1s. 6d.** net.

"A pleasant easy Reader for a class that has just finished its first French Reader. It has a vocabulary and a questionnaire, and can be safely recommended."—EDUCATIONAL NEWS.

**Jean-Robert Flambard, potache.** By M. A. DELANY, Professeur au Lycée de Tours. Illustrated from special photographs. Crown 8vo. **1s. 6d.** net; or with Vocabulary and Notes, **2s.** net.  
 "This account of a French lycée is delightful."—JOURNAL OF EDUCATION.

## FRENCH—Continued

**Matriculation French Free Composition.** By F. A. HEDGECOCK, M.A., D. & L., French Master at University College School, formerly Lecturer at Paris and Birmingham Universities; and H. LUCIET, Agrégé de l'Université de Paris. **2s. 6d.** net.

**A First French Prose Composition.** Based on Conversation and Imitation. By F. W. WILSON, Ph. D., and C. A. JACCARD, Lic. & Lettres, Assistant Masters at Clifton College. Crown 8vo. 2nd Edition. **1s. 9d.** net. KEY, **10d.** net.

"This admirable little book . . . makes French Composition a living thing."—TIMES EDUCATIONAL SUPPLEMENT.

**Mackay and Curtis's French Course.** Two Parts. 116th Thousand. **1s. 6d.** net and **2s.** net.

**A French Course.** By R. P. ATHERTON, M.A., of Haileybury College. Part I, 5th Edition, **1s. 9d.** Part II, 3rd Edition, **2s.**

**Ceppi and Deshumbert's Modern French Grammar.** Issued with the Grammatical Rules either in French or in English. 2nd Edition. **3s.** net.  
 "The best of all recent grammars."—SPECTATOR.

**Gasc's French Dictionaries.**

**Gem**, 137th Thousand, **2s.** net. **Pocket**, 106th Thousand **3s.** net. **Concise**, 9th Edition, **5s.** net. **Standard**, 15th Edition, **12s. 6d.** net.

## CLASSICS.

**A Latin Course for the First Year.** By E. C. MARCHANT, M.A., Fellow of Lincoln College, Oxford, and J. G. SPENCER, B.A., Assistant Master at St. Paul's Preparatory School. In three parts. Crown 8vo. With Coloured Plates and numerous other illustrations. **1s. 9d.** each.

**A Concise Latin Course, Part I.** By E. C. MARCHANT, M.A., and J. G. SPENCER, B.A. 7th edition, revised, with the long accents marked throughout the Latin exercises. Crown 8vo. **2s. 6d.**

This course is written on the lines recommended by the Classical Association, and adopted by the Board of Education.

**A Concise Latin Course, Part II.** By E. C. MARCHANT, M.A., and S. E. WINBOLT, M.A. 4th Edition. Crown 8vo. **3s.**  
 "The plan is excellent."—GUARDIAN.

**A Latin Prose Grammar.** By E. L. CHURCHILL, B.A., and E. V. SLATER, M.A., of Eton College. 2nd Edition. **4s.**

"This new Latin grammar by two Eton Masters has several new and highly commendable features."—THE JOURNAL OF EDUCATION.

**One-Term Series of Latin Classics.**

**Cicero's Pro Milone.** Edited by C. E. LAURENCE, M.A., Assistant Master of Haileybury College. **1s. 3d.**

**Livy's Veil and the Etruscan Confederacy.** Edited by S. E. SINBOLT, M.A., Christ's Hospital, West Horsham. **1s. 3d.**

**Illustrated Classics.**

52 volumes, including Caesar's Gallic War, Virgil's Aeneid, Cicero, Ovid, Livy, Horace, etc. Each volume carefully edited, with Introduction, Full Notes, and Vocabulary. **1s. 9d.** each.

**Simplified Latin Classics.**

Nine volumes drawn from Caesar, Virgil, Livy, etc. Simplified as to text, fully illustrated, with Notes and Vocabularies. **1s. 6d.** each.

**Illustrated Latin Readers.** Edited by C. E. MARCHANT, M.A. With short Notes and Vocabularies. **1s. 6d.** each.

**Scalae Primae.** Simple Stories for Translation. By J. G. SPENCER, B.A. With 20 Illustrations. 11th Edition.

**Scalae Mediae.** Extracts from Eutropius and Caesar. By PERCY A. UNDERHILL, M.A. With 20 Illustrations. 11th Edition.

**Scalae Tertiae.** Graduated Extracts in Verse and Prose from Phaedrus, Ovid, Nepos, and Cicero. By E. C. MARCHANT, M.A. With 28 Illustrations. 5th Edition.

**Fabulae Antiquae.** By A. M. CROFT, B.A., Girls' Modern School, Leeds. Illustrated, with or without Full Vocabulary. **1s. 6d.**

**Dialogues of Roman Life.** By S. E. WINBOLT, M.A., Christ's Hospital. Illustrated. **2s. 6d.**

A series of dialogues, both original and adapted, which are written in accordance with the general aims of the Summer School for the Reform of Latin Teaching.

**De Ducibus.** Selections from Cornelius Nepos. By W. G. BUTLER, M.A., Christ's Hospital. With numerous Illustrations and brief Grammatical Notes. Fcap. 8vo. **1s. 9d.**

This book is intended for pupils who are not yet quite proficient enough to translate Caesar and Livy.

**Books of the Emperors.** A new series of Illustrated Latin Readers. By E. C. MARCHANT, M.A. With Notes and Vocabulary. Illustrated. Book I. 2nd Edition. **1s. 3d.**

# RECENT and STANDARD TEXT-BOOKS

## MATHEMATICS

Issued complete, with or without answers: in separate parts, or Examples separately. Please write for details and prices.

**Pendlebury's Arithmetic.** With 8,000 Examples. By C. PENDLEBURY, M.A., late of St. Paul's School. 27th Edition. 5s.

**Pendlebury and Robinson's New School Arithmetic.** 14th Edition. 5s.

**Pendlebury and Beard's Commercial Arithmetic.** 12th Edition. 3d. 6d.

**Pendlebury and Beard's Shilling Arithmetic.** 26th Edition. 1s. 6d.; or with answers, 2s.

**Pendlebury and Robinson's New Shilling Arithmetic.** 11th Edition. 1s. 6d.; or with answers, 2s.

**Pendlebury's Preparatory Arithmetic.** 3rd Edition. 2s. With Revision Papers, 2s. 6d.

**Pendlebury and Beard's Graduated Arithmetics.** Seven Parts, bound in stiff canvas wrapper.

**Pendlebury and Leather's New Concrete Arithmetics.** Six parts, bound in paper or cloth.

**Baker and Bourne's Public School Arithmetic.** By W. M. BAKER, M.A., and A. A. BOURNE, M.A., of Cheltenham College. 4th Edition. 5s.

**Baker and Bourne's Student's Arithmetic.** 6th Edition. 3s.

**Baker and Bourne's Shilling Arithmetic.** 3rd Edition. 1s. 6d.; or with answers, 2s.

**Arithmetic for Preparatory Schools.** By TREVOR DENNIS, M.A., Head Master of Lady Manners' School, Bakewell, late Mathematical Master at Sherborne School. Crown 8vo. 4s.; or with answers, 4s. 6d. [BELL'S MATHEMATICAL SERIES. General Editor: Dr. W. P. MILNE, Clifton Coll.]

**Problem Papers in Arithmetic for Preparatory Schools.** By T. COOPER SMITH, M.A., late Scholar of University College, Oxford; Mathematical Master, St. Peter's Court, Broadstairs. Second Edition. 2s. [BELL'S MATHEMATICAL SERIES.]

**Arithmetic.** By H. FREEMAN, M.A., formerly Mathematical Master at the Haberdashers' Aske's School. 6th Edition. 3s. [BELL'S MATHEMATICAL SERIES.]

**Arithmetic.** By F. W. DOBBS, M.A., and H. K. MARSDEN, M.A., Assistant Masters at Eton College. Part I, 2nd Edition, 3s. 6d. Part II, 3s. 6d. [BELL'S MATHEMATICAL SERIES.]

**Commercial Arithmetic and Accounts.** By A. RISDON PALMER, B.A., B.Sc., and J. STEPHENSON, M.A., M.Com., B.Sc. (Econ.), both of the Regent Street Polytechnic. 6s. net. [BELL'S MATHEMATICAL SERIES.]

"It almost makes one wish one were a modern child so that one could be educated on such a book."—NATURE.

**A Shilling Arithmetic.** By J. W. ROBERTSON, M.A., B.Sc., Mathematical Master at Robert Gordon's College, Aberdeen. 6th Edition. 1s. 6d. net; with answers, 2s. net. [BELL'S MATHEMATICAL SERIES.] "Deserves the attention of the teacher."—NATURE.

## LITERARY SECTION.

## BOOKS AND THE MAN.

## REVIEWS.

**The Art of Appreciation.**

Teachers of music, of art, and of literature have been apt to think that their task was confined mainly or solely to giving instruction to potential performers. Young people too often have had music lessons, or drawing lessons, all given on the implied understanding that they were to become musicians or artists. The first devastating results may be heard and seen in our more genteel drawing rooms, where one daughter of the house will play the pianoforte and another will embellish the walls with sketches from a very artful Nature.

The second result is even graver, although less immediately obvious and distressing. It is to be found in the widespread want of national taste in music, art, the drama, and literature. In each of these important branches of our people's intellectual and spiritual life we are hampered by a deplorably low standard of taste.

For this state of things there is only one remedy, namely, that we shall recast our teaching in these subjects, and think more of appreciation than of execution. Given a public with a duly trained sense of appreciation there will soon arise a new race of performers. A notable experiment on these lines has been carried out by Mr. Charles T. Smith, a master in a London Council School, who has recorded his experiences in a volume entitled "Music and Life: Education for Leisure and Culture" (King and Son: 4s. net). In many respects this is one of the most interesting and suggestive books on teaching we have read. Mr. Smith is an enthusiast, whose courage did not quail before the task of leading the children of Glengall Road, Poplar, E., to see the beauty of great music and to understand the difference between rag-time and Mozart. His method is based on the development of the simpler rhythms of dance music, folk songs, vocal dance tunes, and so on to the sonata and symphony. Pupils of ten years and upwards are taught the elements of music, and at the end of the primary school course they are able to understand and enjoy opera and oratorio. This sounds incredible, but the sceptic should read the book and learn, not only that it can be done, but also how it has been done. Mr. Smith adds to his main work a very valuable and stimulating chapter on Art Teaching, showing how his principles can be applied to foster appreciation in subjects other than music. I heartily commend this book to the notice of all teachers, for it is the record of a great struggle and a splendid victory over difficulties which would daunt most people.

In a similar vein, but for a different purpose, Mr. Percy A. Scholes, the well-known musician, has written a book entitled "The Listener's Guide to Music" (Oxford Press: 3s. 6d. net). An introduction is provided from the pen of Sir Henry Hadow, who says: "The power of enjoying and loving the best music is not a rare and special privilege, but the natural inheritance of everyone who has ear enough to distinguish one tune from another." This little volume will be of great value to those who attend concerts and desire to know for themselves what is good and bad.

SILAS BIRCH.

**Education.**

REPORT OF THE MINISTER OF EDUCATION, PROVINCE OF ONTARIO, 1918. (Wilgress, Toronto.)

This handsome volume of 439 pages contains all the information we expect in such a work. The figures are well arranged, and ready for reference when the occasion arises. The reader will be glad to take the gentleman's word for their accuracy, and in ordinary circumstances would respectfully put the volume in the place prepared in his library for such tomes, and forget all about it till his day of need drove him again to its pages. But in this case the Minister's own report is worth reading for its own sake. It is just as interesting as if it did not appear in a report at all but in an educational magazine for which we are willing to pay our good white shillings. Of course anyone who has met the Minister will expect all this, for he is pre-eminently human and sympathetic. From him it seems in no way incongruous to hear of the rights of man, the rights of woman, nor even the rights of children. Blue-book as it is, this contains a great deal of humanity. The Minister has a healthy pride in his Province, and, like a good Ontarian, is not at all averse to let the world know of the good things it has in the way of education. We may question the common claim that Ontario has the best educational system in the world, but when it comes to figures we must accept facts and believe that the Minister is right in maintaining that "Ontario has 408 public libraries—in proportion to population the largest number of any country, state, or province in the world." *Floreat Ontario!*

THE CLASSICS IN BRITISH EDUCATION. (Ministry of Reconstruction. 2d.)

A gallant attempt under the patronage of the Ministry of Reconstruction to rehabilitate the Classics. We wonder at whose address this pamphlet is written. Classicists will read it with pleasure, but the plain man will continue to wonder. His interest will centre largely in the section on the *Use of Translations*, but, like the fair-minded man he generally is, he will not forget to read the section of *Fair Play for Classics*.

THE PROBLEM OF THE CONTINUATION SCHOOLS: by Ernest Young. (George Philip and Son. 1s. net.)

This is a 42-page pamphlet that contains a useful analysis of what the Act provides and an exposition of the stages of school life, the aim of the continuation school, and the curriculum under its various headings. A chapter is devoted to the "Works' Schools," with descriptions of those already existing at Bournville, Batley, and Walkden. The author points out the danger involved in a possible strike closing these schools and leaving the pupils on the hands of the L.E.A. A curriculum for a rural school concludes the pamphlet.

A SURVEY OF RELIGIOUS EDUCATION: by William Clayton Bower. (University of Chicago Press. \$1.25.)

The word *Survey* subtends a very large angle in the social and educational writings in America at the present moment, so a volume that deals with the nature and history of this new form of investigation is particularly welcome, even if it ultimately limits itself to a special branch of our work. It is pleasant to find that Mr. Clayton Bower finds the first trace of this modern device in Charles Booth's survey of the conditions of living and labour among the people of London, the results of which were published in 1902. But the first purely educational survey is claimed for the investigation of Professors Hanus and Moore into the educational systems of Montclair and East Orange in 1911. Somehow we seem to have heard of educational surveys of exactly this kind in England, long before that date, though they may not have borne that precise title. If Mr. Clayton Bower cares to look into the reports that Dr. Michael Sadler prepared for many of our English counties immediately after the Act of 1902, he will find that the method was in full blast in England before 1911. In any case, we are glad to have this clear statement of the nature of the survey, and people on this side of the Atlantic will find it to their advantage to read what Mr. Clayton Bower has to say on the subject. He is right in maintaining that not only is the survey in itself a new device, but that it indicates the general recognition

London : HUMPHREY MILFORD, Oxford University Press, Amen Corner, E.C.4

of the need for scientific method in education and social work generally. No objection need be raised to his selection of objectivity, induction, verification, and prediction as the concepts that specifically mark a method as scientific, though it would perhaps have been better if he had worked out the first concept on the lines of a pursuit of the objective standard. The social survey is well treated, and the general educational survey prepares the way for the special treatment of the survey of religious education. As a separate branch of education, religious training has only recently been differentiated from ordinary secular education, though for various reasons it has bulked more largely in our English schemes than in those of the United States. To readers on this side there will be found a refreshing absence of the controversial in this little book. With a title like that, it would have suggested immediate ideas of strife to an English reader. As a matter of fact the author settles down at once to an investigation of how best to help the intelligent members of a local church—any local church—to set about the best way of getting at the important facts regarding the state of affairs in their church. Warnings are given about the danger of accepting second-hand reports and opinions, for it is of the essence of the survey that the sources of information should be immediate and personal, and that critical judgments passed upon situations should be independent.

The second part of the book is taken up with a general schedule for the survey of religious education in the local church. This consists of a remarkably well arranged synopsis of the various items that have to be taken into account in preparing a survey. It is admirably suited to the needs of the earnest but not at all original person who approves of the general idea of a survey but is not sure how to go about instituting one in his own circle. Even the most dull and perverse person can hardly go wrong with a guide like this before him. One might as well hope to go wrong in the magnificently guide-posted corridors of the London Tubes. An excellent bibliography concludes this most competent treatise.

J. A.

**THE EXPERIMENTAL PSYCHOLOGY OF BEAUTY:** by C. W. Valentine. (Nelson and Sons. 1s. 3d. net.)

It is always an excellent sign when a book of this kind appears in a second edition. In its original form Professor Valentine's work was very widely and very favourably reviewed, and he is still able to claim that his is the only work on this particular subject in the English language. In spite of the absence of competitors, the author has been driven by his own love of completeness to add a section on *Music and Rhythm*, and to make a number of additions and some emendations throughout the old text. The new matter is exceedingly interesting, and is based upon original investigations as well as on the results of the work of others. Some will still object to Professor Valentine's demand from those upon whom he experiments that they shall tell him *why* they find certain musical intervals very pleasing, slightly pleasing, merely pleasing, displeasing, and so forth. It is very doubtful whether evidence of this kind is of any value, especially in view of the increasing suspicion with which reasons of this kind are regarded. But this is the only grumble that seems necessary. All the rest is cordial praise.

J. A.

### English.

**PITMAN'S SELF-HELP EXERCISES IN ESSAY WRITING:** by J. Hardman. (Sir Isaac Pitman and Sons. 10d. net.)

This is an attractive little book, simple and unpretentious in its treatment. Its main basis is the well-tried 'sedulous ape' theory of Stevenson, though the pupil is advised first to make his own effort and then to compare it with selected models. The models of descriptive writing are fresh and modern, and are such as will appeal to youths. Numerous narrative poems are included for reproduction in prose, though we are not quite so certain of the advantages of these 'paraphrasing' exercises. Ample practice is also given in the expansion of outline novels and stories preparatory to the final section, which gives suggestions and topics for original treatment.

As a whole the book is a refreshing change from the average class-book of English composed of a dull routine of 'Exercises' in Grammar and Diction, Sentence-building and Paragraph-building. Its arrangement is such that it may be used either as a class-book or by the private student. From its compactness and cheapness it should be welcome in the upper classes of Elementary Schools and in Continuation Schools.

X.

**ENGLISH LITERATURE FOR SECONDARY SCHOOLS:** SILAS MARNER (abridged). Edited by May Copsey. (Macmillan. 1s. 6d.)

This addition to a well-known series is listed as suitable for the third year in a Secondary School, and contains sufficient work for one term. The simple story of George Eliot has received considerable abridgment, but otherwise only a minimum of editing: the 'introduction' occupies but four pages, and the 'Notes' but two. Though 'Questions and Exercises' are a feature of this series of class-books, we almost wish in the present case that they had been omitted. The few included deal chiefly with the subject matter, and we think that any ordinary class-teacher could improve on both the quality and quantity of these exercises. On the other hand, the truth may be that the compiler's difficulties result from the fact that the book is read by most people simply as a good story, and not as a source of 'composition' subjects. On the whole this latest addition to the excellent series (edited generally by J. H. Fowler) hardly appears to reach the standard of some of its predecessors.

F.F.P.

**ORAL AND WRITTEN COMPOSITION:** by R. S. Wood. Senior Book. (Macmillan and Co. 9d.)

This follows the general arrangement of Mr. Wood's earlier books. The contents are arranged in 'forty-four lessons,' a fact possibly responsible for the lack of coherence and arrangement so apparent in the book. Each 'lesson' begins with the 'intensive study' of an extract, though we are not sure of the ultimate use of the endless exercises in transcribing, punctuating, etc., which largely comprises this intensive study, nor are we certain of the advantage of such questions as "Underline the nouns in apposition," "Write out the relative pronouns in the extract; also the personal pronouns and their cases," "Mark the Prefixes and Affixes." This kind of 'study' may keep a class at work, but Mr. Wood should know from experience that the road to real 'Composition' hardly lies this way. Exercises such as "Underline the participial and infinitive phrases" have a quaint Victorian odour, redolent of the times when pupil-teachers diligently parsed and analysed Gray's *Elegy* and other classics in the belief that they were thus studying literature.

Direct exercises in Composition occupy the concluding portion of each 'lesson,' and the minor part of the book as a whole. Here the lack of arrangement is patent. Thus the pupil is asked to study how to write Biographies before he practises description of Common Objects; while again, general topics such as "Heroism in Daily Life" and "Animals, the Servants of Man" are placed before the description of Simple Home Scenes. Mr. Wood would do well to sort out this hotch-potch and medley of topics into some sort of rational gradation. The book as a whole might well be edited: it contains far too much 'work' of an aimless variety; the sequence of its lessons is monotonous and unprogressive—the forty-fourth is much like the first—and though the book will keep a class 'busy,' we think often their time might be better employed.

FELIX.

**A CONCISE ENGLISH COURSE:** by A. Mercer. (McDougall's Educational Company, Ltd.)

A book intended apparently for students in Junior Commercial Schools. It contains among other things a few exercises on Composition from English models, and a brief treatment of Business Correspondence and Indexing and Précis writing.

The treatment as a whole is traditional and unenterprising. The compiler apparently believes in 'Grammar' as a preparatory basis for Composition, since more than half the book is filled with 'Grammar.' A few outlines of Essays for expansion are given, and some ten well-known extracts from famous writers are included for study.

On the whole the book strikes us as somewhat dull and disappointing. Mr. Mercer may be an excellent teacher, but in printing what appears to be his teaching notes and exercises he plods stolidly along a very ordinary and uninspiring track. Such books as these suffer badly by comparison with little volumes such as O'Grady's "Matter, Form, and Style," in which English is treated with enthusiasm and brilliance. If publishers continue to produce books of such an ordinary type as the one before us, we hope the new Commission on the Teaching of English will begin their labours without delay.

# THE M<sup>c</sup>DOUGALL LIST

## MON PETIT CAMARADE FRANÇAIS

Livre Premier. Par L. LAVAUULT, Paris; P. LES-  
TUNG, Marseille; et B. DUMVILLE, London. Follows  
in the main the principles of the New Method.  
Copiously Illustrated. 272 pages. 2s. net.

## PETITE ESQUISSE DE LA LITTÉRATURE FRANÇAISE

By J. E. MANSION, B. ès L. An Excellent Selection.  
New Edition. 2s. net; boards.

## EXTRAIT DES AUTEURS FRANÇAIS DU XVII<sup>ME</sup> SIECLE

By J. E. MANSION, B. ès L. 288 pages.  
Cloth Boards, 2s. 6d. net.

## M<sup>c</sup>DOUGALL'S PREPARATORY FRENCH

An easy, pleasant introduction. Cloth, 10d.

## FABLIAUX FRANÇAIS

A simple, attractive Illustrated Reader. 1s. 6d. net.

## GATEWAYS TO BOOKLAND

A series of delightfully Illustrated Literature Books  
for pupils of from 9 to 14. A very wide range of  
authors of all periods is drawn upon.

Winged Flights into Story Land, 2s. 4d. Within the Gates 3s.  
Vistas of Romance - - - 2s. 8d. In Kings' Gardens, 3s.

## REGIONAL GEOGRAPHY OF THE WORLD

A Modern Scientific Treatment. Contains an abun-  
dant of Contour Maps in Colour and Black and White,  
with many Diagrams. A section of questions based  
on the text is a very valuable feature. Revised to  
date. 224 pages. Cloth covers, 2s. net.

## MODERN TIMES THE EMPIRE AND THE WORLD SINCE 1789.

A new edition of this remarkable book, revised to  
February, 1919, has been brought out. It explains  
the inwardness of events that have determined the  
history of these epoch-making days. An essential  
book for the future citizens of our race.  
320 pages. Cloth boards, 2s. 6d. net.

## EVERYDAY COMPOSITION

A new book of Hints and Helps in Letter and Essay  
Writing. Excellent in every way. Cloth limp, 1s. net.

## PLAIN-TEXT SHAKESPEARE

In this edition of English Classics are given the greater  
plays of Shakespeare, unabridged, but carefully  
edited for Schools, and without notes. The books are  
full crown 8vo in size, most clearly printed, and bound  
in limp cloth. Price, each 6d. net—except *Hamlet*  
and *Coriolanus* (each 9d. net), and *Richard II* and  
*King Henry V* (each 8d. net).

## CONCISE SCHOOL DICTIONARY

Over 15,000 Words, Phrases, etc. Exceedingly useful  
Appendixes. Boards or Limp Cloth, each 9d. net.

## SONGS OLD AND NEW

Contains 9 National, 19 British, 5 New Folk, 8 Classical  
Songs, 4, Glee, 19 Rounds. In Staff or Sol-Fa.  
Paper, 6d.; Cloth, 8d.

Piano Edition, 4s. 6d. net; by post, 5s.

### Modern Languages : Some Reflections.

THEORY AND PRACTICE OF LANGUAGE TEACHING : By L. Creagh Kittson. (Oxford. 4s. net.)

We remarked in our April issue, "We shall never develop anything like a standardised and permanent system of language-teaching out of our present experimental stage till we have clear ideas on the actual matter to be taught, as distinct from the process of teaching it."

It was no small shock to us, after reading Mr. Kittson's words on the importance of the spoken language to find, on turning to the specimen he gives from one of his own French readers, a passage, and *questionnaire*, well stocked with the Past Definite. Such a question as, "*Pourquoi ne se servit-il pas . . . ?*" has a pleasing old-world flavour about it, well-suited to the fairy-tale it deals with (Oh, that fairy-tale vogue !), but it is not spoken French (not of this century, anyhow !).

The objections to teaching the Past Definite to any but advanced pupils in possession of a thorough practical acquaintance with spoken French (and to teaching its use in speech at any stage whatever) are unanswerable :

- (1) It inculcates a non-colloquial usage ;
- (2) It fails to inculcate a colloquial usage ;
- (3) It wantonly throws away a priceless instrument for teaching the correct use of *avoir* and *être* as auxiliaries.

To put it bluntly, we would rather learn to speak the Past Indefinite (Perfect) by any method under the sun than the Past Definite by the best method in the world.

It is worth observing that it is quite as possible to support the Direct Method blindly as to oppose it blindly. In what follows we must not be taken as attacking the Direct Method in its main principles. But what will keep that method alive and inclusive, and save it from becoming an exclusive fetish and a mere vogue, is criticism. And criticism we mean to apply, wherever we see a label, or a shibboleth, or a "whole-hog" rear its head.

The Direct Method has too good a start now (and too much official countenance) to be seriously damaged by such treatment.

There is much good matter in Mr. Kittson's book, and if it is not particularly original, that is not his fault. Much of it will be quite new, no doubt, to a large number of readers. The bibliography is particularly good.

But the writer's *ex parte* attitude leads him into strange contradictions and some very palpable blunders.

He tells us that you don't learn a language by learning about it. No, you don't ! And you don't learn language teaching by learning about it, either. Yet Mr. Kittson's book has this defect in common with most treatises of its class, that it tells one all about method, but does not clinch the matter with a concrete programme. As far as we know, there is only one book that does : Mr. Palmer's, mentioned below.

Mr. Kittson's bias against "grammar" (as a practical linguistic instrument, that is) leads him to condemn the learning by heart of such a paradigm as "der gute Mann, des guten Manns, etc." He should have seen that such a paradigm is not grammar at all, but practice. (It does not follow that it is a good form of practice : that is another question.) The grammar of it would be an abstract rule, such as "When a noun is limited by article and adjective, the adjective has the strong ending only where the article has no ending." That is what Mr. Kittson should have condemned.

An evident contradiction (revealed in most Direct Method writings) lies in the treatment of pronunciation as contrasted with that of other features.

"Correctness in the use of language," says Mr. Kittson, "depends on the practical linguistic sense, which can only be acquired by use. The development of this linguistic sense is hardly helped at all by grammatical knowledge. . . . The critical sense can judge the final product, it can do nothing to produce it," and so on.

But in the next chapter :

"From the practical point of view the scientific study of speech sounds is necessary, because without such training it is impossible to arrive at a pure pronunciation of a foreign tongue. To ignore phonetics as a means of acquiring pronunciation is to rely on imitation alone. Imitation, however, is insufficient, and the notion that strange speech-sounds could be so acquired is founded on ignorance of the difficulty of the undertaking."

Henry Sweet is quoted in support. Yes, but it was consistent in Henry Sweet, for he believed in the utility and indispensability of grammar.

Whatever can be urged in support of phonetics can be urged *a fortiori* in favour of grammar. For difficult as are the physiological operations involved in producing strange sounds, they cannot compare for one moment with the psychological operations in framing, by mere analogy, correct sentences.

We phonetics teachers get our results far more by steady insistence on listening and on painstaking imitation than we care to admit. (We must, while there are so many disputed points in regard to vowel-positions.) And we Direct Methodists (when the Inspector isn't there) explain grammatical points—in English. Don't we ? Often !

It is the grammar-method people who ought to advocate phonetics. Phonetics is grammar ; and the whole-hog Direct people ought to laugh at it.

Mr. Kittson ought to say "learning about sounds is not . . ." But we spare him the rest.

Henry Sweet on grammar is well worth quoting.

Bad "results are generally due not to using grammars, but to using the wrong grammars—those which ignore the living language in favour of the old-fashioned literary form of it." (Texts and questionnaires which do this are just as bad—perhaps worse !)

Again, "while admitting the importance of the imitative principle, we must, even from the limited point of view of the modern European languages, add that 'rules are often a great help'—we may say 'an indispensable help.'"

Again—with syntactical rules such as those for the use of the subjunctive, purely mechanical methods are rarely effective, or, indeed, available : the different constructions can only be discriminated by the help of reason. "Syntactical rules tell us how far the analogy of any particular construction extends." "It would be hopeless to try to master the initial mutations in modern Welsh without knowing the rules which govern their highly abstract and varied syntactical functions."

And, in regard to adult pupils, "The fundamental objection to the natural method is that it puts the adult into the position of an infant, which he is no longer capable of utilising, and, at the same time, does not allow him to make use of his own special advantages . . . the power of analysis and generalisation—in short, the power of using a grammar and dictionary."

With nothing else to do, a child without grammar learns to speak fairly (only fairly) well in about six years, being one pupil among scores of teachers, and learning from six to ten hours a day. It is not good enough.

The statement that *parler, parlez, parle, and parlai* are only one word can only be characterised as a shocking blunder. Why not include *par les* ? Why not say the same of 'heir,' 'air,' 'ere,' 'e'er,' and 'air' ? We have not yet arrived at a satisfactory definition of "word." But a definition which ignores semantic values will certainly never stand.

Here we see that same party spirit which leads Prof. Wyld into statements that amount to this, that no man can appreciate the poetry of Shakespeare and the Bible till he has mastered the original Elizabethan and Hebrew pronunciation.

As a matter of fact a very good case could be made out for an unphonetic orthography, if it really made all the semantic distinctions, and did nothing else. In any case, so long as we must (regrettably, of course) use the present French spelling, orthography remains a part of French grammar—in the sense "the grammar of written French"—whatever Mr. Kittson may say.

What shall we say to this : "For the language is speech ; and having gained the power to express himself in speech, the only thing necessary for the learner in order to reduce speech to writing is to make himself familiar with its orthographical system." As a matter of fact, the most important fruit of modern linguistic thought is the distinction we are learning to notice between the spoken and the written idiom.

We must implore all future writers on method to observe the following rules :—

1. Before setting pen to paper, read—
  - (a) H. Sweet : Practical Study of Languages.
  - (b) H. E. Palmer : Scientific Study and Teaching of Languages.

(Bang goes ten-and-sixpence for the latter ; but it is half-a-guinea well spent. When you have read it you won't talk so glibly of "banishing the mother-tongue from the modern-language classroom," nor be so sure that *free* conversation is the best means of acquiring fluency.)

(Continued on page 236.)

The  Times.

2. Avoid the question of educative value. Confine yourself to the most expeditious method of giving the mastery of a language. Take our word for it, no man on earth, being shown a way of learning a language in three weeks, will deliberately prefer a method that takes him three years for the sake of the educative value. A man would say, "Teach me the language first. I'll think about the educative touches later,—all that about 'acquiring right notions about the nature of language and about linguistic phenomena generally.'"
3. Avoid philological dogmatisms, such as—
- (a) "As well attempt to control the tides or the winds as the natural development of language." (Anyone who has heard a German mother speaking of a "Trottoir" and her children calling it a "Bürgersteig" knows what schoolmasters can do, for good or ill, when they get on the warpath.)
- (b) "Speech has been in every case anterior to writing." (We have extant writing of a sort by prehistoric men whom we have never heard speak. Mr. R. R. Marett tells us there is at least one distinguished anthropologist who thinks it quite possible that men wrote coherently before they spoke coherently. In any case, it doesn't affect the real issues of language teaching the tiniest little bit.)
- (c) "Writing is always founded on speech." (There was no connexion, as far as we are aware, between the Red Indians' semi-hieroglyphic picture-messages and their speech. In fact, these messages were interlingually intelligible, unless we are very much mistaken.)
- (d) "The unit of language is the sentence." Logically, perhaps. We can't very well say till a really good definition of "sentence" has been framed. Linguistically *not*. The linguistic unit is any group of sounds that a native speaker would practically never hesitate in the middle of; such as . . . . . "What's the good of . . . . .?"
- (e) "Every sentence must be composed of at least two distinct parts." (It is time the fiction that all predication is of a copulative nature should be laughed out of existence. We defy anyone to analyse "An earthquake took place" into the earthquake and its taking place! It is one. It is all predicate. The whole of our logico-grammatical theory in this matter wants spring-cleaning.)

H.O.C.

### French.

LA PATRIE: ECHOS DE L'HISTOIRE DE FRANCE POUR LES COMMENCANTS: Julia Titterton. (Oxford. 2s.)

The vocabulary of this reader seems carefully chosen, and a phonetic transcription of each word is given in the word-list. Both words and style are on that convenient common ground of the written language and the spoken—not obviously colloquial nor yet distinctly literary—the compromise which Henry Sweet advocated for beginners.

A FRENCH GRAMMAR: Massard and Durno. (Rivingtons.)

We would forgive Mr. Massard and Mr. Durno a great deal for their careful combination of brevity with exhaustiveness. Such rules as "The Indefinite Article is omitted before 'nombre de'" do not take much space, and are quite necessary even in a short school grammar—until our smaller dictionaries learn to deal with such points.

But we do not like excursions into historical grammar such as "The ' is not the definite article in 'so much the worse'." The very fact that we can prefix "so much," which would otherwise be tautologous, shows that to our present-day Sprachgefühl "the" in such cases is the definite article. The writers should have said "The ' was not . . . ." This inability to distinguish between *is* and *was* (between *synchronie* and *diachronie*, as M. F. de Saussure would say, in his *Cours de Linguistique Générale*, is very common among grammarians, just when philologists are beginning to be cured of it.

The phonetics chapter contains some statements with which we are unfamiliar. For example, "[i] is long before mute x, e.g., dix [di:]" and "there will be no difficulty in distinguishing a close [e] in *fer* [fer] and an open [e] in *père* [pɛr:]." Again

"[ski] for *ce qui* is dialect." (If this is true, we can only say that all the French officers we ever met speak dialect.) We wonder if [paje] for *payer* is a misprint? We hope so.

RECUEIL GRADUE DE BONS MOTS ET ANECDOTES COURTES: G. N. Tricoche. (Hachette. 1s. 6d.)

There is greater variety and novelty among these tales than one generally anticipates in such collections; and the humour is not so painfully obvious as is often the case. "*Composition d'un Futur Orateur, 'sur les Vaches'*" is delightful. "*Les vaches sont des animaux utiles. Les vaches donnent du lait. Quant à moi, donnez-moi la liberté ou la mort.*"

RECITS EN PROSE ET EN VERS: Marc Ceppi. (Hachette. 1s. 3d.)

What is the good of Direct Method if you will call a *bonne* a "*servante*"? That is one's feeling after reading the first paragraph, which is full of book French. But matters improve, and there is excellent material in this book, though of rather too "pathetic" a quality for English boys. The unilingual vocabulary down the side of the text is very good indeed.

LE FRANÇAIS DES FRANÇAIS DE FRANCE: Jehanne de la Villesbrunne. (Oxford. 2s. 6d.)

This is a very delightful book of idiomatic conversations, well printed, at a remarkably reasonable price. Will not the authoress give us also a more elementary reader? The trouble is that it is so much easier to find a book to teach one figures of speech such as "*Je connais les ficelles,*" "*Faire la grasse matinée,*" than one containing the French for such ordinary expressions as "Shall I tie it in a bow or a knot?" "Put it the other way round."

L'ANGLAIS POUR LES FRANÇAIS: A. J. de Havilland Bushnell. (Oxford. 3s.)

Some rather old-fashioned grammar and very old-fashioned orthoepy (rules of pronunciation) interspersed with endless word-lists. When will it be realised that to make useful vocabularies, not collection but selection is required? When we see a dictionary which says boldly on its cover "*Only 15,000 words*" we shall buy that dictionary. The book professes to teach English conversation—rapidly, too. Of what use for such a purpose are words like "Adam's ale," "aquamarine," "harpoon," "presage," "embellish," "calumniate"? We can only find one passage of continuous prose—a tale from Mr. Noel-Armfield's *English Humour in Phonetic Script*. Do Mr. Noel-Armfield and Mr. Bushnell really imagine that "When the latter had recovered sufficiently from the shock to stand the announcement" (especially "the latter") is colloquial English? But then Mr. Bushnell thinks the English for *le pain et le beurre* is "the bread and butter."

Why this book should be 3s. and Madame de la Villesbrunne's only 2s. 6d. passes all understanding.

TRANSLATION FROM FRENCH: Ritchie and Moore. (Cambridge.)

I is perfectly true that translations from modern languages compare very unfavourably with those from the Classics in the matter of accuracy, and it is a shame that it should be so. To the examples given by Mr. Ritchie and Mr. Moore we could add many from the newspapers during the war, as when Mr. William Archer quotes from a German writer a remark about "the *unfalsified* doctrines of Buddhism, or some such religion, apparently unaware that *unverfälscht* is the ordinary German word for "unadulterated," and consequently the writer simply means "the doctrines in their original form," or when *Mangel an Schneid* (lack of go, lack of spirit) was rendered "lack of form," whatever that might mean, and *Schützengraben*, frequently, "trench of the defence" (as though it had been *Schutzgraben*).

But if this admission should give the enemy occasion to blaspheme against progressive methods of language teaching, we warn him to reflect whether Walter Pater, for example, who renders "*frais et dispos*," "fresh and characterised by intelligent disposition" (disposition in the sense of arrangement), when it really means just "hale and hearty," is likely to have learned by the Direct Method. No; he, or his mentor, was a victim of what Sweet calls the "etymological fallacy" method, based on the belief that you can infer the meaning of a word from its derivation.

This is a book for scholarship-standard pupils. The introduction is very stimulating.

# St. Thomas's Hospital Medical School

(University of London.)

## SCHOLARSHIP EXAMINATION

—Third Week in July—

**ARTS Scholarship**—Standard that of "London Matric."—Subjects (compulsory),  
 (i) ENGLISH, (ii) ARITHMETIC, ALGEBRA, GEOMETRY, together with  
 three (*one of which must be a language*) of the following: LATIN, GREEK,  
 GERMAN, FRENCH, ANCIENT or MODERN HISTORY, PHYSICS,  
 CHEMISTRY.

**SCIENCE Scholarships.**—Subjects: CHEMISTRY, PHYSICS, BIOLOGY.

FOR ENTRANCE FORMS AND FURTHER PARTICULARS APPLY TO THE SECRETARY:—

**G. Q. ROBERTS, C.B.E., M.A.,**

**St. Thomas's Hospital, Lambeth Palace Road, London, S.E. 1.**

# RETIRE ON FULL PAY.

MEMBERS OF THE COLLEGE OF PRECEPTORS are particularly invited to apply.

**U**NDER the revised scheme of Pensions for Teachers you will be entitled to roughly half-pay when you retire. Excellent as such a scheme is, the prospect of having your salary halved is not an attractive one, for you will have more leisure and more time and opportunity in which to enjoy those things which for so long have been denied you. If you were to retire on *full* pay you would be able to travel, to live in much better circumstances than half-pay would permit, and it would obviate that "eking out" existence that is the lot of so many.

**I**NDEED there is no need for you to look forward to restricted income on retirement, for by adopting the Century Superannuation Scheme you can easily secure for yourself *full* salary, and at a cost which will not be an inconvenience whilst you are in school. For instance, supposing you are 25, for a quarterly sum of just about £5 you can secure an additional £104 annually at the age of 60, or if then preferred a lump sum of £1,269 8s. will be paid in lieu of the Income. No medical examination is necessary under this scheme. Probably you already put aside more than such a sum out of your increased salary, so that by adopting this plan you are investing your money to excellent advantage, and without the slightest risk or fear of depreciation. The funds of the Century Insurance Co., Ltd., allied with Friends' Provident Institution, founded 1832, together exceed £5,000,000, and there is no better office in the world.

**Y**OU may think there is the possibility of your not wishing to continue the payments after a few years. The Century recognise this contingency, and in such cases and in the event of death are able to return on the average more than the amount paid in premiums. You are thus secured in any case. If you are interested, kindly fill in and return us the inquiry form at the foot, or a copy of it will do, in order to secure these benefits at age 60. A scheme to meet your requirements will then be submitted.

The Manager, Century Superannuation Department,  
 90, Cannon Street, London, E.C. 4.

## SUPERANNUATION INQUIRY FORM.

TO THE MANAGER, CENTURY SUPERANNUATION DEPT.,  
 90, CANNON STREET, LONDON, E.C. 4.

Please send me details of the Educational Superannuation Scheme. I was born on the.....of.....  
 18..... and am inclined to invest about £..... (yearly, termly, quarterly) in order to secure an Income or Alternative  
 Cash Sum at age.....

Name (in full) .....

Address .....

**N.B.**—The above Plan may, if desired, be adapted so as to include full protection for your dependants in event of your death. Please state clearly if this is desired.

**Russian.**

**RUSSIAN PRONUNCIATION IN A NUTSHELL:** J. Roston. (Roston's Language Institute. 6d.)

An orthoepical card which might be of some use to those who are satisfied with just making themselves understood, and are quite indifferent to *nuances*. But it is not worth sixpence.

**Mathematics.**

**EASY TEST PAPERS IN ARITHMETIC AND ALGEBRA:** arranged by W. S. Beard. (Methuen and Co.)

These form a useful and well-graded set of examples suitable for candidates for the Common Examination for Entrance to Public Schools and for similar examinations. The examples are of a traditional and eminently 'safe' variety, anything ultra-modern being discreetly avoided. The hundred 'tests' are equally divided between Arithmetic and Algebra, and the book may find a welcome in Preparatory Schools.

P.

**ARITHMETIC AND ACCOUNTS:** in two books. Book I, 1s.; with answers, 1s. 4d. Book II, 1s. 3d.; with answers, 1s. 6d. (McDougall.)

These two books are intended for commercial students in Evening Schools and Continuation Classes. In both volumes the Elements of Book-keeping are treated in close conjunction with Arithmetic. Book I is largely business arithmetic of conventional types, with introductory exercises in Ledgers, Sales and Purchase Books, Returns Book and Cash Book. Book II deals with more advanced business arithmetic, and contains rather less book-keeping. Altogether the attempt at 'correlation' is commendable, for too often the subjects have been treated as poles apart. The books may be recommended for use in Commercial Schools.

P.

**SOLID GEOMETRY:** by R. S. Heath, M.A., D.Sc. Fourth Edition. (Rivingtons.)

This book follows generally the Euclidian scheme and methods. There is, in addition, a chapter on "The cylinder, the cone, and the sphere," including some spherical geometry. The Euclidian method, considered as a means of achieving results, is admittedly tedious, but it is easy to modify it, and Dr. Heath's book contains a sound elementary course of solid geometry and clear diagrams which are almost self-explanatory.

**ELEMENTARY MENSURATION, CONSTRUCTIVE PLANE GEOMETRY, AND NUMERICAL TRIGONOMETRY:** by P. Goyen. (3s. 6d. Macmillan.)

The title sufficiently indicates the nature of the contents. There are a large number of exercises, chiefly in constructions. A very valuable feature is the introduction of elementary forms of reasoning, leading up to theoretical geometry.

**DYNAMICS, PART II:** by R. C. Fawdry, M.A., B.Sc. (2s. 6d. Bell.)

This book is an elementary introduction to the dynamics of rotating bodies. The treatment is simple and easy. The use of the calculus does away with the cumbrous methods which have afterwards to be unlearned. Exercises involving the differentiation and integration of trigonometric functions are placed by themselves, so that there is a complete course involving only the differentiation and integration of  $X_n$ .

**History.**

**A SHORT HISTORY OF THE GREAT WORLD WAR:** by F. Maynard Bridge. (H. F. W. Deane and Sons, The Year Book Press. 6s. net.)

In these days of costly book production it is pleasant to receive a handsome and well bound volume, containing 260 pages of good paper, well printed throughout, with a coloured frontispiece by Mr. Henry J. Ford, useful maps on the inside covers and small maps interspersed in the text, the whole priced at six shillings. We do not greatly admire the frontispiece with its somewhat crude symbolism. Although the skill of the artist leaves nothing to be desired, we could wish that his talent had been directed towards showing something of the greater

purposes of the conflict. It is a trifle banal to represent St. George trampling on a Teutonic dragon, with the Kaiser as a kind of hybrid wolf-dragon flying from a place of skulls, and our Allies in the remote background playing the part of spectators. Mr. F. Maynard Bridge falls into no errors of this kind. He has accomplished with great success the difficult task of giving a perspective view of the "far-flung battle line" and of the events which took place during the long struggle. His narrative runs with remarkable smoothness, and at the proper intervals he interpolates a useful summary of the story. The book thus falls into five parts, each containing a record of the fighting during a year.

This plan is at once ingenious and helpful, since each section is sub-divided into chapters relating to the happenings on the Western Front, the Eastern Front, the Near East, Africa, and at sea.

Mr. Bridge has a happy knack of concise description: "About twelve miles from the entrance of the Dardanelles the distance between the shores is less than a mile. Here it was, between the ancient cities of Sestos and Abydos, that Leander accomplished his famous swimming feat, and that Xerxes crossed the Hellespont, as it was then called, with his enormous army for the invasion of Greece."

This volume should be added to every boy's library, and those of older years will find it an extremely handy book of reference. It is a straightforward chronicle, free from "purple patches," and marked by a desire to recognise valour or decent behaviour on the part of the enemy. This history is of exactly the right kind for its purpose and for the times. We are too near the struggle and too oppressed by its accompanying sorrows and its possible results to find any satisfaction in a prose epic. Mr. Bridge has wisely allowed the facts to speak, and his careful survey gives a due perspective and conveys to the reader an accurate picture of the momentous period between August, 1914, and November, 1918.

**Chemistry.**

**THE NATURAL ORGANIC COLOURING MATTERS:** By A. G. Perkin, F.R.S., and A. E. Everest, D.Sc. (Longmans, Green and Co. 28s. net.)

It is safe to predict that this monumental book is destined to remain for many years the standard book of reference for those chemists and biologists who are interested in natural dyestuffs or in the chemical structure of colour-producing substances occurring in or being derived from plants and insects.

The volume, which is one of the "Monographs on Industrial Chemistry," edited by Sir Edward Thorpe, F.R.S., enlarges considerably the scope of Rupe's well-known handbook "Die Chemie des Natürlichen Farbstoffe," the last edition of which appeared in 1909. Since that date a mass of new facts has come to light, and many of the colouring matters have been isolated in a pure crystalline condition for the first time. Thus it has been found possible to ascertain their chemical structure. A systematic classification of these substances is now possible, and has been arrived at in this volume. The authors have been pioneers in the work of investigation, and the text is enriched with a quite unusual number of "private communications" notably by Professor Perkin.

The natural dyestuffs are grouped according to the chemical constitution of their main tinctorial constituents, and within the group the arrangement follows the order of their commercial importance. Where members of two widely distinct groups exist side by side in the same plant, the description of the plant is found under that heading which from its present or past use appears most suitable. Scarcely any relevant fact in connection with the history, use, and chemical nature of the dyestuff or its derivatives has been omitted, and the historical notes lend a human interest to the accounts so concisely given. The descriptions of cochineal, lac dye, madder, turmeric, indigo, and woad are very complete and illuminating.

Of surpassing interest is the chapter concerning the  $\gamma$ -Pyran group, in which are outlined the researches of Willstätter with Everest and others into the question of the nature of the red and blue colouring matters of flowers and fruits (anthocyanins). The first pigment to be obtained in a chemically pure form was that of the cornflower. In the investigation great experimental difficulties had to be overcome, but the essential conditions for a successful isolation were worked out, with the result that separations of the pure pigments from the hollyhock, delphinium, and viola followed quickly. More recently Everest succeeded in isolating the pigment of Sutton's 'Black Knight,' the well-known variety of viola.

(Continued on page 240.)

# HISTORY

## *An effective Combination*

### PHILIPS'

## WALL ATLAS OF MODERN HISTORY

Edited by Professor RAMSAY MUIR, M.A., and GEORGE PHILIP, F.R.G.S.

Eight attractively coloured Wall Maps illustrating those great changes in Political Geography which have characterised the main periods in the modern history of Europe. By the use of essential names only and strong colouring for political features, the maps are rendered beautifully clear. Size of each Map, 45 by 36 inches. On rollers or to fold. Singly, 7s. 6d. net. Sets, 45s. and 50s. net.

### PHILIPS' NEW

## SCHOOL ATLAS OF MODERN HISTORY

By RAMSAY MUIR, M.A., Professor of Modern History in the University of Liverpool.

Over 121 Maps and Diagrams, with Index. Large 4to. 4s. 6d. net.

There is no existing publication in English equal to this, having regard to the character of its contents, their extent and arrangement, as well as to the quality and price of the work.

To their Majesties the King and Queen and H.M. Queen Alexandra,

## WINSOR & NEWTON,

### Prepared Water Colours.

IN

WHOLE and HALF CAKES, WHOLE, HALF, and  
QUARTER PANS,  
and WHOLE, HALF, and LARGE TUBES.

Quarter Pans of Winsor and Newton's Artists' Water Colours are of the same outside dimensions as the Half Pans. They may, therefore, be used in Winsor and Newton's range of Half Pan Japanned Boxes.

The advantages of habituating the Student at the outset of his career to the use of the BEST materials are so obvious that no attention need be drawn to them.

Messrs. Winsor and Newton's Artists' Water Colours are necessarily more expensive than those usually manufactured for School use, but as, owing to their superior strength, a small quantity yields approximately the same amount of colour surface as the larger pans of Water Colours generally sold for Students' use, the expense in both cases is much the same.

The special attention of Teachers and the public is, therefore, invited to these Quarter Pans of Colour, which, costing practically the same, provide the Student with a superior article.

Full detailed catalogue may be obtained from any of the leading Artists' Colourmen throughout the Country, or from 39, Rathbone Place, London, W. 1.

Established nearly a Century.

## TUITION BY POST.

Practical Training in

## SHORTHAND, Book-keeping and Accountancy, Commercial Practice, Banking, Advertising, Commercial Law.

Pitman's Postal Courses are admirably adapted for teachers who are unable to take advantage of the ordinary facilities for receiving oral instruction, but desire to qualify in commercial subjects. Each lesson is a full exposition of that part of the subject covered. One course, or any group, may be commenced at any time, and from any stage of present knowledge.

Write for details, stating the subjects in which you are interested.

*Pitman's School*  
BUSINESS SECRETARIAL & CIVIL SERVICE TRAINING

The Leading Teachers' Training Centre in the Kingdom for  
Commercial Subjects.

Principal: FREDERICK HEELIS, F.R.S.A.,  
180, SOUTHAMPTON ROW, LONDON, W.C.1.  
Seven London Branch Schools, and at Bristol and Leeds.

Though not usually classified among dyestuffs, the tannins are systematically treated in this volume. These are so largely employed as assistants in the dyeing operation, as for instance in the fixation of the basic colours on cotton, that their description naturally falls within the scope of a work of this character.

A short and interesting chapter on the manufacture of organic pigments (lakes) concludes the volume, but an Appendix is added giving lists of "Indian Natural Dyestuffs," "Natural Dyes of the Philippines," "British Plants capable of Dyeing mordanted Wool," "Leaves and Flowers of Wild and Cultivated British Plants capable of Dyeing Aluminium Mordanted Cotton," the latter according to unpublished experiments by the late Professor J. J. Hummel.

H. N. LOWE.

**ELEMENTARY CHEMISTRY OF AGRICULTURE:** by S. Allinson Woodhead, M.Sc., F.I.C. (3s. 6d. Macmillan.)

The most interesting part of this book is the practical exercises. Teachers of agricultural chemistry and those who are taking courses of study in connexion with school gardens should read these sections. They will find many useful suggestions in them.

H.M.

**INORGANIC CHEMISTRY (Eleventh Edition):** by James Walker, M.D., F.R.S. (5s. net. Bell.)

This is a revised and enlarged edition. It has been brought up to date by the introduction of recent discoveries. There is a large amount of information, well arranged and well written, so that it is easy to understand. The matter is arranged so as to follow the general lines of a practical course in chemistry.

M.

## Music.

**CHILD SONGS** for the Primary Departments of the Sunday Schools and Day Schools, and for Home Singing. Vol. I.

**CHILD SONGS** for the Primary and Junior Departments of Sunday and Day Schools, and for Home Singing. Vol. II. Both edited and in part composed by Carey Bonner. (London: The Pilgrim Press, 16, Pilgrim Street, E.C.; J. Curwen and Sons, Ltd., 24, Berners Street, W.; J. Williams Butcher, 2 and 3, Ludgate Circus Buildings, E.C.)

*Vol. I.*—This excellent collection of songs—sacred and secular—while primarily intended for use in Sunday Schools and the home, can be utilised effectively in the musical education of young children everywhere. A careful and competent student of the needs of children, and particularly of the music that children can interpret and appreciate, the compiler has succeeded admirably in gathering a choice selection of songs, which children and teachers enjoy. A wide use of this volume will not only materially assist superintendents and workers among the young in their efforts to secure smooth and happy working in their schools and classes, but will give pleasure to the children themselves, because the songs are easily learned and thoroughly understood. At the same time the editor has wisely chosen for inclusion in this volume only such songs as are appropriate for teaching to children. The classified indexes and the various hints on the teaching of the pieces will prove invaluable to those who are not professional teachers but who wish to train the children properly and effectively.

*Vol. II.*—In the second volume of "Child Songs" the compiler has preserved some of the good features of the first volume, and at the same time added some interesting and valuable new points. "The Songs of the month," for instance, provide new material appropriate for use throughout the year. "Nature songs" abound in this collection, and are classified under such heads as "Among the Flowers," "The Sunshine and the Stars," "Songs of the Wind," "Insects and Animals," etc., so that the teachers, other than those engaged solely in the religious education of children, will here find a serviceable and comprehensive collection of good music worthy of being taught. As in the previous volume, there are carefully compiled and classified indexes, with hints and instructions to teachers. Moreover, Volume II supplies a need for a collection of suitable songs which may well be taken with children of the junior age—that is, those up to about 12—whereas the former volume was compiled chiefly for primary children. All teachers of children would do well to have a copy of each of these volumes in their collections of music for the young. Carey Bonner thoroughly understands children and their tastes and their needs, and in these "Child Songs" has succeeded in compiling a most useful collection of good music.

A. G.

**FIRST PRINCIPLES OF MUSIC:** by F. J. Read. (London: Edward Arnold. Price 1s. 6d.)

In this new book on "First Principles of Music" the writer seems to have discovered the way of compiling a text-book which shall contain only what is really essential and interesting. He deals carefully, and what is of great importance to students at the beginning of their courses, *briefly*, with the main points required in the study of First Principles of Music. Of course there is much more to be learned even about first principles than is contained in this little book, but the matter here dealt with is so clearly treated and so interestingly written that students of music will find ease in studying this volume. The chapters in Part II dealing with "The Pianoforte and its Predecessors," "Earlier Instruments," and "Orchestral Instruments," in particular contain just enough information to whet the appetite for more, and on reading through the whole book one feels that the author's desire expressed in the preface "that the rudimentary knowledge acquired may prove an incentive to pursue the study of these subjects" will be to a considerable extent realised.

G.

**THE CHILD'S TRAINING IN RHYTHM, A HANDBOOK FOR THE TEACHER:** by Sylvia E. Currey, L.R.A.M., A.R.C.M. (London: Joseph Williams, Limited, 32, Great Portland Street, W. 1. 2s. net.)

The writer of this little book recognises what is known by most teachers of music and especially teachers of children, that a most important factor in the training in music is a proper sense of rhythm. Many pupils and some teachers confuse rhythm with time, and seem to think that if they can interpret correctly the "time" of a piece of music the rhythm does not so much matter, or that it can take care of itself. In this work the writer has tried to show—and she has done it very successfully—the difference between the two elements, and by a great variety of carefully chosen examples clearly points out the essential distinctions between them. She rightly claims that the teaching of rhythm is vital to any completely correct interpretation of music, vocal or instrumental, and those who study her book should be greatly helped.

A. G.

## General.

**AMATEUR AND EDUCATIONAL DRAMATICS:** by Evelyne Hilliard, Theodora McCormick, Kate Oglebay. (Macmillan. 5s. 6d. net.)

This little book deals in a compact manner with the theory and practice of dramatic activity; and any teacher not quite sure of her way in school dramatics would be well advised to read it. She will find plainly-written, thoughtful essays on the development of character, intellect, and deportment through dramatisation, interesting psychological analyses of the child as actor, and a well-reasoned plea for the cultivation in the child of this natural form of self-expression. The difference between the entertainment gained by the audience and the development of personality gained by the child-actor in dramatic performances is clearly drawn, and the latter is rightly stressed.

If the chapters devoted to theory are convincing as to the importance of dramatics, those devoted to practice are clear in the information they impart. This information does not deal with one play, or a given number of plays—although the illustrations are definite and aptly chosen—but with those general problems and pitfalls for amateurs which are usually omitted from books and are only to be learnt from the fervid tongue of an agonised producer. Cues, grouping, stage crowds, "props," lighting, make-up, and the like are all treated simply but adequately, as is the problem of "How to Write a Play."

If enthusiasm for their subject has led the authors to invent for it the virtue of clarifying the imagination in reading lessons, which may be questioned, or to justify it as a money-making subject—which is unnecessary, it has nevertheless had the beneficial effect of eliminating dullness from a book which is consistently interesting. This appetising result is largely aided by arranging the matter in cocktail strata, coloured by the individual styles of the trinity of authors and the points of theory and of practice with which they deal in turn.

F.T.

Messrs. George Philip & Son Ltd. of 32, Fleet Street, London, will publish in the Autumn a new "Advanced Atlas for Senior Schools," "The History of the British Empire," by Professor Ramsay Muir, and an "Elementary Historical Atlas," suitable for elementary schools and the junior forms of secondary schools.

# THE TECHNICAL COLLEGE,

LOUGHBOROUGH, LEICESTERSHIRE.

H. SCHOFIELD, M.B.E., B.Sc. (Hons.) Lond.; A.R.C.Sc.Lond., A.M.I.C.E., PRINCIPAL.

## DEPARTMENTS OF MECHANICAL, ELECTRICAL & MOTOR ENGINEERING.

Complete Courses of Training are arranged in both Theory and Practice of the above branches of Engineering.

The Workshops of the College provide accommodation for 500 students working at the same time.

The equipment is on most modern and comprehensive lines, and comprises plant for turning, fitting, milling, grinding, automatic lathe operating and tool setting, tool and gauge making, foundry work, pattern making, drawing office work, heat treatment, viewing and testing of all kinds.

None but first-class work of a productive character is undertaken by the students, working under the skilled supervision of a fully qualified technical staff.

The complete course covers a period of five years, during which works training in all the above sections will be given, and this will be accompanied by a full theoretical course of instruction in the College Lecture Rooms and Laboratories.

Intending students should be at least sixteen years of age, and have had a good Public School or Secondary Education.

The fee is £5 15s. 6d. per term, and there are three terms in the College session.

Boarding accommodation is provided in Hostels attached to the College, full particulars of which, together with illustrated Prospectus, will be forwarded upon application to the Principal.

W. A. BROCKINGTON, O.B.E., M.A., Director of Education for Leicestershire.

## THE MUSIC OF LIFE

Education for Leisure and Culture, with Curricula evolved by Experiment in  
 an Elementary School.

By CHARLES T. SMITH.

The appreciation of Music and Art, making use of all media. With 12  
 photographs and over 100 textual musical illustrations.

TIMES.—“A very remarkable book. Mr. Smith is a sound Platonist, and a moralized intellectualism is the keynote of his æsthetics. The idea of Appreciation underlies everything. Extremely thorough and skilful work done in the service of fine ideals.”

MR. ERNEST NEWMAN (OBSERVER).—“Mr. Smith has not only methods, but most admirable methods. Any child can assimilate this sort of teaching. I warmly commend this excellent book to all who have to do with the musical education of children.”

SIR W. H. HADOW, Mus.D.—“A valuable contribution to musical education.”

DAILY NEWS.—“A most remarkable book. Millionaires should buy (say) a million copies and present them to the schools. A musical education in itself.” (Mr. George Sampson.)

“All who take a real live interest in the science of education should study it.”—  
 (Mr. A. Kalisch.)

# THE EDUCATIONAL TIMES

## SOME RECENT BOOKS ON SCIENCE.

### ELEMENTS OF GENERAL SCIENCE (Revised Edition).

By O. W. CALDWELL, Ph.D., and W. L. EIKENBERRY. 8vo Cloth. xii + 404 pages. Illustrated. 5s. 6d. net.

This volume presents an introductory course on sound lines, covering the whole range of science. The revised edition, as compared with the earlier one, contains an additional 100 pages, an entire part devoted to astronomy, and chapters on electricity. The topics discussed are grouped under six major headings: I.—The Air; II.—Water and its Uses; III.—Work, Energy and Electricity; IV.—The Earth in Relation to other Astronomical Bodies. V.—The Earth's Crust; VI.—Life upon the Earth. While the present edition also contains much new material relating to the applications of science to household, community, and industrial problems, and numerous illustrations, many of them of the "how it works" type, it does not neglect the formal and theoretical aspects of the subject, and will it is believed, lead the student to acquire those habits of accuracy and the spirit of investigation which make the subsequent study of the differentiated sciences at once more profitable and interesting.

### FIRST COURSE IN CHEMISTRY.

By W. McPHERSON and W. E. HENDERSON. 12mo. Cloth. x + 416 pages. Illustrated. 6s. net.

A book which embodies the latest results of laboratory research. It is intended primarily for those students beginning chemistry, whose study of the subject will cease when they leave the Secondary School, though it also furnishes a thorough foundation for those who intend to specialise in the science. The theoretical portions of the subject are developed briefly and as a natural outcome of facts already presented, emphasis being placed wherever possible on the applications of chemistry to metallurgy, manufacture, agriculture, household chemistry and sanitation. The book contains many interesting illustrations of these applications and photographs and biographical details of the world's great chemists.

### A FIRST COURSE IN PHYSICS.

By R. A. MILLIKAN and H. G. GALE. 12mo. Cloth. 482 pages. Illustrated. 6s. net.

In this book the authors have developed their subject on inductive lines, starting by considering the hows and whys of some simple experiment or well-known phenomenon, and gradually leading the student back to the great principles about which the apparently disconnected facts of physics group themselves. As in FIRST COURSE IN CHEMISTRY, much attention has been devoted to the applications of physics in everyday life, while the illustrations include photographs of the most notable achievements of physics and portraits and details of biographical interest of eminent modern physicists as well as of the great pioneers of the science.

## The CARSON-SMITH MATHEMATICAL SERIES.

By G. St. L. CARSON, M.A., M.Sc., Reader in Mathematics in the University of Liverpool, formerly Head Mathematical Master in Tonbridge School; and DAVID EUGENE SMITH, Ph.D., LL.D., Professor of Mathematics in Teachers' College, Columbia University.

### ELEMENTS OF ALGEBRA.

Part I. 340 pages. Illustrated. 3s. 6d. net.  
Part II. 214 pages. Illustrated. 3s. net.  
Parts I and II. 538 pages. Illustrated. 5s. 6d. net.

### PLANE GEOMETRY.

Part I. 266 pages. Illustrated. 3s. net.  
Part II. 216 pages. Illustrated. 3s. net.  
Complete, 482 pages. Illustrated. 5s. 6d. net.

ANSWERS CAN BE OBTAINED TO BOTH BOOKS IF DESIRED.

### ELEMENTS OF ANALYTIC GEOMETRY

By P. F. SMITH and A. S. GALE. 8vo. Cloth. 424 pages. 10s. 6d. net.

A book which presents all the elementary methods and ideas of analytic geometry as a general science rather than as a detailed treatment of conic sections. The subject is developed after the Euclidean method of definition and theorem without, however, adhering to formal presentation. Each method is summarised in a rule and stated in consecutive steps, and many illustrative examples are worked out in the text.

### ELEMENTS OF THE DIFFERENTIAL AND INTEGRAL CALCULUS.

By W. A. GRANVILLE and P. F. SMITH. 8vo. Cloth. 463 pages. 12s. 6d. net.

A book which treats of all the topics from which a selection would naturally be made in preparing students either for elementary work in applied science, or for more advanced work in practical mathematics, and is suitable for the pupil who has completed an introductory course but is not yet capable of working with advantage from larger advanced treatises on the calculus. This revised edition incorporates those changes due to recent developments in the study of the calculus and includes a large number of examples without answers, miscellaneous examples, and much practical problem material based on knowledge that all students of the calculus have at their command.

### INTRODUCTION TO ANALYTIC GEOMETRY.

By P. F. SMITH and A. S. GALE. 8vo. Cloth. 217 pages. 6s. 6d. net.

The first nine chapters of the authors' ELEMENTS OF ANALYTIC GEOMETRY (q.v.) form the basis of this text-book. The volume outlines a course giving an adequate minimum preparation for the calculus and presents a short but thorough course in analytic geometry. The method of treatment is analytic rather than geometric; the results are stated in the form of theorems or rules; and many illustrative examples are worked out.

### NEW ANALYTIC GEOMETRY.

By P. F. SMITH and A. S. GALE. 12mo. Cloth. 342 pages. 7s. 6d. net.

This volume provides a thorough and adequate preparation for the study of the calculus and applied mathematics. The subject matter differs in many respects from that included in modern textbooks, the authors having recognised the great importance, in the applications, of the exponential and trigonometric functions, of setting up and studying functions by their graphs, of parametric equations and the locus problem, and of fitting curves to points determined by empirically given data, and chapters covering all these topics have been included.

### THE TEACHERS REGISTRATION COUNCIL.

Representative of the Teaching Profession.  
Constituted by Order in Council  
29th Feb., 1912.

The Council maintains an Official Register of Teachers who have been accepted for admission under the Conditions of Registration.

The Register is open to qualified teachers in every branch, and until the end of 1920 experience under approved conditions is the sole qualification required. After that date the conditions will become more stringent.

Particulars and Forms of Application may be obtained from

THE SECRETARY,  
Teachers Registration Council,  
47, Bedford Square,  
London, W.C. 1.

### THE COLLEGE OF PRECEPTORS.

Incorporated by Royal Charter.

BLOOMSBURY SQUARE, LONDON, W.C. 1.

#### MEMBERSHIP.

Membership of the College is open, under certain conditions, to persons engaged in education.

Particulars concerning the privileges of membership may be obtained from the Secretary.

Schools desiring affiliation with the College should make early application for the necessary form, on which particulars may be supplied.

### THIS ISSUE CONTAINS :

**Essays on The Board of Education Report, Physical Education, The Play Way in Lancashire, Reports of Teachers' Conferences, and Notes and Comments, with a Summary of the News of the Month.**

### UNIVERSITY CORRESPONDENCE COLLEGE

(Founded in 1887.)

PRINCIPAL :  
WILLIAM BRIGGS, LL.D., D.C.L.,  
M.A., B.Sc., F.C.S., F.R.A.S.

### LONDON UNIVERSITY DEGREES.

B.A., B.Sc., M.A., LL.B., B.Sc. (Economics), B.D.

During the last fifteen years 6,904 U.C.C. Students have passed the Intermediate and Degree Examinations of London University, in addition to gaining 5,207 Successes at Matriculation.

Prospectus, giving full particulars of courses and fees for London University Examinations, post free to PRIVATE STUDENTS from—

THE SECRETARY,  
No. 15, BURLINGTON HOUSE, CAMBRIDGE.

### THE ASSOCIATED BOARD OF THE R.A.M. AND R.C.M.

FOR LOCAL EXAMINATIONS IN MUSIC.  
Patron: HIS MAJESTY THE KING.

**LOCAL CENTRE EXAMINATIONS (Syllabus A).**  
Examinations in Theory held in March and November at all Centres. In Practical Subjects in March—April at all Centres, and in the London District and certain Provincial Centres in November—December also. Entries for the November—December Examinations close Wednesday, October 15th, 1919.

**SCHOOL EXAMINATIONS (Syllabus B).**  
Held throughout the British Isles three times a year, viz., October—November, March—April, and June—July. Entries for the October—November Examinations close Wednesday, October 8th, 1919.

Specimen Theory Papers set in past years (Local Centre or School) can be obtained on application. Price 6d. per set, per year, post free.

The Board offers annually SIX EXHIBITIONS, tenable at the R.A.M. or R.C.M. for two or three years.

Syllabuses A and B, entry forms, and any further information will be sent post free on application to—

JAMES MUIR, Secretary,  
14 and 15, Bedford Square, London, W.C. 1  
Telegrams: "Associa, London."

### THE INCORPORATED SOCIETY OF MUSICIANS.

Founded 1882. Incorporated 1892.

#### OBJECTS OF THE SOCIETY.

The objects for which the Society is established are the promotion of whatever may tend to the elevation of the status, and the improvement of the qualifications, of all Members of the Musical Profession, or may aid the musical education of the people.

#### ADVANTAGE OF MEMBERSHIP.

A Benevolent Fund for Members, the Regulations for which have purposely been made as wide as possible in order to meet the many and very varying contingencies which arise from time to time.

An Orphan Fund for the children of musicians, which is open to the dependents of all musicians, whether their parents were members of the Society or not.

Legal advice on all professional matters: Income Tax Claims; Copyright; The Recovery of Fees, &c.

Registers open to members of "Vacant Appointments" and "Engagements," and for the transfer from member to member of pupils moving to new districts.

#### LOCAL EXAMINATIONS IN MUSIC.

The examinations of the Society, established in 1884, are carefully arranged in a systematic series of Progressive Grades, embracing a complete course of musical study, and constitute a most valuable guide for Teachers in recording the progress of their pupils

Full particulars may be obtained upon application to the GENERAL SECRETARY, 19, BERNERS STREET, W. 1

## NOTES AND COMMENTS.

### Peace—and After.

ON Saturday the 28th of June a Peace Treaty was signed by the German delegates, after Germany had given the most complete indications that the compact, so far as she is concerned, has rather less value than the now proverbial scrap of paper. A world weary of warfare is confronted with the choice between a continued struggle to repress Germany and the establishment of an effectual League of Nations to repress all warlike purposes everywhere. Great enterprises have been waiting for peace, but in this peace there is to be found no impetus towards social progress. Until we have fuller assurance than at present that the 28th of June marked the end of a chapter, and not merely the beginning of a fresh paragraph, we shall feel little confidence in the future. New schemes for social improvement are suffering from infantile paralysis. Not a single brick has been laid towards the provision of "homes for heroes." The plans for training soldiers are hedged around with countless obstacles. The Education Act remains a splendid engine without the necessary motive power. The current notion of progress appears to be that we shall slip back speedily and smoothly into pre-war conditions. We have had a magnificent Ascot Week, and we are drinking more beer than ever.

\* \* \* \* \*

### The Doldrums.

The Education Act had a remarkably smooth passage through Parliament and is now becalmed, although many imagine it to be voyaging prosperously. The sections dealing with child employment are not yet in force. Children of school age are still being used to earn money, not only in casual work, but also in factories. With the end of the war we ought to be able to improve this state of things, and also to raise the age of school attendance and set up the new Continuation Schools. But no Minister or Administration can start the Education Act without teachers. Recruits are not coming forward in anything like the required number, and the status and prospects of the work are being depreciated in public estimation by the acts of teachers themselves, some of whom appear to think that by striking they will convince the nation that they are indispensable. Mr. Fisher has told these teachers that they are mistaken, that they are not in the position of an industrial Trade Union attacking the capitalist, but in that of trustees ignoring their obligations. The real sufferers are the children. It would be well for the Board to intervene at once when a strike of teachers is threatened and to carry through a compulsory arbitration. It would be well for teachers to remember that the Board can break any strike by the simple emergency device of authorising the employment of unqualified persons as teachers. That it has not done this is evidence of the Board's sympathy with the teachers' demands, but since every strike affects adversely the future supply of teachers the Board ought to take early and effectual steps to prevent strikes.

## SPECIAL NOTICE.

### Registration Problems.

The position of dentists and nurses in the matter of registration has lessons for teachers. At the meeting of the National Dental Association last month it was stated that there were about 5,500 registered dentists in the country and about 33,000 unregistered. This state of things appears to arise from the fact that the register was made too rigid at the start, and it has been proposed that all dentists of five or more years' experience should be admitted to the register, so clearing the ground for the formation, in due course, of a register consisting only of qualified persons. It will be noted that this is the plan adopted by the Teachers Registration Council, but some dentists object that it will introduce undesirable people. As against this objection it may be pointed out that even if some such people are admitted they will die ultimately and very bad cases can be excluded by a requirement that the experience shall be of a satisfactory nature and that blatant advertising shall disqualify. The case of the nurses is different. The Bill for the Registration of Nurses has been dropped, chiefly because the nurses themselves have not found common ground of agreement. This is the great difficulty in making a Register of Teachers a reality. It would seem as if the conception of a unified profession finds a ready welcome until it is seen to involve the sacrifice of a little power on the part of sectional bodies. A true unification is not possible on the basis of the absorption of some sections by others, nor even on the plan of one section affirming its right to lead the rest.

\* \* \* \* \*

### Lord Haldane on "Atmosphere."

Speaking at the annual meeting of the Church School Managers and Teachers, Lord Haldane advocated a solution of the religious difficulty on the lines followed in the Education Act for Scotland. Denominational Schools are to have a distinctive "atmosphere," there is to be a right "of entry" in other schools and the teachers are to be told that any objections they may have cannot be held valid against the State's decree. Lord Sheffield has assumed the familiar posture of his former state as Mr. Lyulph Stanley and has re-affirmed the doctrine of undenominational religious teaching, adding the reminder that there are political denominations, such as the Socialists, who may demand that their doctrines shall find a place in the school curriculum. This reminder serves as a debating point, but it does not help the argument. The truth seems to be that the full recognition of minorities is essential if we are to avoid State absolutism in education. We are unlikely to accept State absolutism, and the real problem is to secure national or State aid for education without imposing hardships on individuals or minorities. Probably the best solution of the problem will be found in giving education grants to parents subject only to the requirement that they shall provide for their children a good secular education. If they choose to spend the grant in sending the children to schools having a distinctive "atmosphere" that is their own affair. The State is only concerned to see that the schools thus selected shall be efficient so far as secular teaching is concerned. This plan would meet the religious difficulty and give to private schools a reasonable chance. Also it would be a convenient method of meeting the current demand that the State shall recognise and aid in meeting the financial burdens of parenthood.

### University Grants.

The Commissioners of the Treasury, in consultation with the President of the Board of Education, the Secretary for Scotland, and the Chief Secretary for Ireland, have appointed a Standing Committee to enquire into the financial needs of University education in the United Kingdom, and to advise the Government as to the application of any grants that may be made by Parliament towards meeting them. It is accepted that a great increase in the grants to Universities is desirable, and the Standing Committee will consider the problem as a whole, making suggestions as to the allocation of the grants. This will be done in such a way as will secure the independence of each University and give free play to its individuality. Sir William McCormick is Chairman of the Committee, which numbers nine members, in memory, we may suppose, of the Sacred Nine who dwelt on Mount Olympus, with Mr. Austen Chamberlain in the part of Apollo. Frankly, our worship of these new Muses is none too fervent. We are sceptical or heretical enough to mistrust the arrangement which makes the financial position of a University depend on the opinion of nine people, however eminent. Time alone will show whether this scheme is really compatible with the proper independence of our Universities. It will be difficult for the Committee to preserve a perfectly open mind in regard to proposed developments, especially in regard to curriculum.

\* \* \* \* \*

### An Apology for Advanced Courses.

The Board of Education have issued an official memorandum on Advanced Courses in Secondary Schools. It appears that up to the beginning of May in this year nearly 200 schools had been recognised for grant under the scheme; four as providing three types of Advanced Course, 36 as providing two, and the rest in respect of a single course. We are told that the Board are fully conscious of the difficulties and drawbacks incident to a system of transferring pupils at this period of school life from one school to another. Comfort is apparently found in the fact that there are "instances in which a Head Master, taking a large and generous view of the position of his school in a wider system, has expressed the desire to transfer his own best pupils to a school where their needs can be more effectively met." Yet the Board assure us that "it is not in fact possible for every Secondary School to provide an Advanced Course, or for a large number of schools to provide more than one such course." This latter statement seems to be borne out by the figures we have quoted, and we are still in doubt as to the wisdom of fostering the specialisation of schools in this manner. It would be more in accord with sound principles to require each school to give a good general education, leaving specialisation to the Universities. The practice of transferring pupils at fifteen or sixteen to a fresh school could be justified only on the assumption that a school is a place of instruction and nothing more.

**Greek at Oxford.**

"Oxonian" writes: The debate and the voting in Convocation on the 17th of June were interesting, even exciting, and mark another stage in the inevitable solution of this question. For when only a majority of 6 out of 618 voting can be found to support the continued compulsion, there is really no doubt of the ultimate issue. We anticipate with confidence that the autumn term will see the option introduced, much on the lines of the Statute which Council supported on the 17th. It would probably have gone through then except for the change of attitude on the part of the Regius Professor. Mr. Barker's able speech was conclusive for all practical men, but Professor Murray's appeal, joined this time with the forces of the traditionalist party, turned enough votes to gain another short respite for the *status quo*. The issue was joined between the supporters of the Statute, which compels some ancient language, some modern language, some mathematics or science to be taken for Responsions, and those who favoured the compromise put forward by Dr. Murray, by which compulsory Greek would be retained for all those studying a literary or "humane" subject while discarding it for the mathematical and scientific student. There were two fatal obstacles to this proposal, one that the Professors of the "humane" subjects, notably those of law and history, did not want it, the other that the Head Masters were practically unanimous that it would be unworkable. Mr. Norwood's short but weighty speech—all the weightier that it was short—was decisive on the latter point.

Perhaps the most striking feature of the debate was the ardent desire of the supporters of freedom that Greek should not suffer, and their firm belief that it would not. Allusion was made to the manifold possibilities of encouraging its serious study by other and more effective means than that of insisting on the beggarly elements involved in a compulsory minimum. We should still have over 400 scholarships awarded at Oxford and Cambridge to the classical student, and, beyond that, let the Colleges and the University and the Government take what measures seemed best to encourage and improve a study which all agreed was of the highest importance.

It might well be an instruction to Council for the next occasion on which they tackle the subject to present their proposals in a more acceptable form. They should have been introduced in an explanatory speech. And, above all, let them consider whether the Statute might not itself be improved. The corresponding Cambridge Statute, now in force, is a better instrument in several particulars.

---

*"Some men, friendly enough of nature, but of small judgment in learning, do think I take too much pains, and spend too much time in setting forth these children's affairs. But those good men were never brought up in Socrates' school, who saith plainly that no man goeth about a more godly purpose than he that is mindful of the good bringing up, both of his own and other men's children."*—ROGER ASCHAM.

*Quoted by the Board of Education in "Notes on Teaching in Continuation Schools as a Career."*

**PHYSICAL TRAINING IN SCHOOLS.**

BY W. A. EVERITT.

Of all the after-the-war problems which are disturbing the public conscience, the most important is the physical welfare of our children.

A great deal of public discussion and correspondence has recently taken place about the lessons we have learnt from the war, with relation to the comparative physical unfitness of our nation. We have heard metaphors about a C3 nation; we have had groups and grades of physical ability and thousands of men have been totally rejected as unfit to perform any military duties. This means that a large percentage of the nation is not fit to undergo even a moderate amount of physical exertion. The cause lies in the lack of a rational system of physical training in the schools. There have been schemes and systems galore—all more or less isolated and producing beneficial results to the fortunate few. On the other hand there have been many purely money-making systems, extensively advertised, some as remedial systems, others merely muscle producing.

The days of the quack doctor are long since numbered, the quack dentist is on his last legs; it is time that any quack system of physical training was likewise consigned to oblivion. The first process of "Nationalisation" should begin with the child, and the best thought of the country on the subject of national physical fitness should be utilised in building up a practical and workable system.

The evolution of Physical Training in the Army has taught us a great deal. The heads of the Army Gymnastic Staff grappled with the problem of big numbers in an amazing manner. The old apparatus work, so beloved of the old soldier, was doomed. Free exercises, largely Swedish in character, were adopted, and taught to large numbers at a time in progressive stages, with great success. In six to eight weeks the recruit became a different man and passed on to the exercises provided for the trained soldier. As the war lengthened the physical standard of new recruits deteriorated, and the exercises were made easier, although the same relative progression remained. No physical training hour was complete which did not include one or more games, and these games were played in the true keen competitive spirit, without which any game is useless.

A notable advance in Army Physical Training was made when the "Brain Stimulating Tables" were introduced. These had their origin on active service. The men came out of the trenches tired and leg weary, yet their fitness was as necessary as ever; they must not be allowed to become stale. Therefore their physical training had to be stimulative alike to mind and body. They played every variety of game—forgotten games of childhood brought up to date—new games—games requiring mental concentration—all with the object of stimulating and reviving energy and interest. Sand-bags were used half filled with straw, and it was found possible to perform most of the old exercises with these, used in a competitive way. A complete table, keeping closely to the scientific sequence of exercises, could be performed by substituting competitive movements

with sandbags or caps, and simple games requiring little or no apparatus. The inherent sporting spirit of the nation was harnessed and the power thus gained was used for a definite object—the beating of the Hun. The Convalescent Depots were turned into huge playgrounds where games of every description were played with the zest of the schoolboy.

Now are we going to make use of all the knowledge gained during the war with regard to our methods of physical training? It was proved the nation required it; it was likewise proved that we have the necessary material and system to achieve astonishing results; it remains to be proved whether we shall return to the old go-as-you-please days or use our war experience to the advantage of future generations.

The Secondary Schools, perhaps without exception, have the double advantage of playing fields and ample equipment. In addition, many of them have Officers Training or Cadet Corps attached to the school. The boys of these schools are well catered for as a rule. Nevertheless, the physical training is not as it should be. The O.T.C. may serve a useful purpose, but is voluntary and expensive. Field games are excellent, but it is only the best boys—the natural athletes—who get a real chance. They do not constitute the C3 majority in after life. It is for the latter that we must scheme. A broad physical training system based on Swedish exercises, combined with brain-stimulating exercises and recreational training, would enlist the enthusiasm of every boy, as it appealed to men of every age and medical category in the Army. The Public Schools have their specialist instructors, and they naturally produce very fit men and very fine athletes. One is not concerned with them; they have succeeded in working out their own salvation. The average Secondary School boy, however, is not so fortunately situated, and possibly in dabbling with Cadet Corps he is missing the real training. His physical training is neglected; true he plays games as a school, but not as an individual. Put him into a daily physical training class, under one of his own masters, who has qualified himself to instruct, and he will get much more exercise, amusement, and development than in performing a periodical squad drill with or without arms. There is no limit to the term "physical training." It embraces everything which relates to the fitness of the boy; hence the plea for a broad scheme.

Boxing among the older boys is scarcely touched, and wrestling as a branch of physical training in schools I have never heard of. Yet under the newest Army rules, wrestling could be made enjoyable and interesting; the contests are of short duration, so that comparatively large numbers of boys could be taken at one time. There are many masters in secondary schools who are quite competent to teach boxing or wrestling and who would welcome any scheme of training based on their Army experience, correlated with their professional knowledge of children.

Now a few words on primary schools. In the majority of these schools, physical training is merely a subject in the curriculum to be taught in fine weather or missed altogether on the slightest pretext. The Board of Education has published a "Manual of Physical Training" which need not be criticised in this article. If it were strictly adhered to or even properly understood the children would still miss much. Unfortunately it is

often adhered to in the wrong way. Some years ago I saw a teacher wrapped up in muffler and great-coat taking a class of boys with the official syllabus in his hand open at the table he was supposed to be teaching. He was probably not to blame; he was like so many others, bored by the business. It was a subject on the time-table to him, nothing more.

We have all seen boys performing difficult exercises still wearing a collar of linen or celluloid. Try to perform the exercise of "head bending backward" with a linen collar pressing on the throat, and then imagine the effect of a rubber one. The time-table in many schools only allows for two half-hours of physical training per week. No child should have less than half an hour's physical training per day. It is very doubtful whether primary school children should do anything but physical training and perhaps singing during the last hour of the day. Their drill, as it is often termed, should be recreative. No child should be expected to maintain a rigid position for long; it taxes the nervous system too much. A system such as has been previously suggested would be ideal for children, as it would produce free movement, quickness of eye and brain, and stimulate and strengthen the whole body. Has anyone seen children playing brigands and soldiers, crows and cranes, giants and dwarfs, or walking a chalk line backwards, taking part in a square tug-of-war, or mental relay race? All these exercises, in their proper sequence, can be formulated into a table, bringing into play each set of muscles in turn, stimulating the child's mental activities and causing endless amusement. Little or no apparatus is required—games are endless in number and initiative is by no means dead.

Physical training in a primary school is held to be of far less importance than the "Three R's." The child's bodily fitness comes second, third, or nowhere. This is national folly. Handicapped as schools are by lack of playing spaces, lack of moral and financial support in this branch of school work, all that has been mentioned in this article can be done in the playground, school hall, or classroom. Many teachers, naturally athletic by temperament or through their enthusiasm, devote hours of their lives in organising various forms of recreation and training boys to swim and to play games. They perform wonders; they are helped by public spirited men in many cities. But physical training is a national business, and can only be looked at from a national point of view. Give us a broad basis to work upon with freedom for expansion—a compulsory period of training per day—qualified people to help and advise, and in the next generation the A1 man would preponderate. The motto of the Army School of Physical and Recreational Training is, "*Mens sana in corpore sano.*" What a glorious motto for every Education authority!

---

"Swimming Instruction" is the title of a book shortly to be issued by the Amateur Swimming Association and published by Messrs. Simpkin, Marshall and Co. The scheme of instruction is arranged specifically for classes of school children and is copiously illustrated by a unique series of photographs extracted from a cinema film.

"SWIMMING INSTRUCTION" will become the text book for school use in the increase of swimming foreshadowed by the 1918 Education Act.

## EDUCATION IN WAR TIME.

### The Report of the Board for 1917-18

THE Annual Report of the Board of Education, issued last month, covers the period during which the effects of the war were felt most acutely in the schools. The earlier years of the struggle were marked by a steady deterioration of equipment, a gradual loss of men teachers, an extended employment of children of school age, and an inevitably lowered standard of schooling for those who remained behind. In the future, enlightened historians will probably hold us blameworthy for having failed to maintain, at all costs, the full efficiency of our educational system. They will offer shrewd comments on the eviction of our Board of Education from its own quarters to provide for the imagined needs of a mushroom department. They will recall with some surprise the expression of opinion by a politician—of the kind described as “eminent”—to the effect that education in war time is a luxury. The only bright elements in the picture will be the remarkable way in which teachers and administrators contrived to “carry on” with a good measure of success, and the fortunate turn of events which brought to the post of President of the Board a man who was himself educated to the point of caring greatly about education and was able to seize the opportunity to propound far-reaching measures of reconstruction. The Report says with truth, “Before the war the passage of these measures would have been difficult, but it was made easy by the determination of all classes of the people that effect should be given to a larger and more generous view of the public responsibility in the sphere of education.”

Some of the effects of the war are set forth in the brief statement that one hundred members of the Board's office staff have been killed or are still missing; of teachers in public elementary schools 1829 have been killed and 131 are disabled from further service as teachers; of those who were teaching in schools named on the Board's list of efficient secondary schools 392 are known to have been killed and 10 disabled. The shortage of teachers had results which are illustrated by figures showing how the normal limit of 30 pupils per class in secondary schools was exceeded during the war. On October 1st, 1915, 826 classes (in 358 schools) were over the limit. In 1916 the number was 1,308 (in 461 schools), and in 1917 it had increased to 1,722 (in 532 schools). In each case the Board were satisfied that the excess was unavoidable and due to circumstances arising out of the war. One such circumstance is worthy of note, namely, that the number of pupils admitted to secondary schools on the grant list increased steadily from 55,590 in 1915 to 71,938 in 1918. The total number of pupils rose from 180,507 in October, 1914, to 243,506 in 1918. This increase is to be ascribed mainly to the improved wages paid in industry, and it may be taken as proof that the

working people are eager to give opportunities to their children. There is, in fact, a vast field still to be worked in our system of secondary education. Together with the related problem of continuation schools the development of secondary schools forms the most pressing task of educational administration, and in this task the most urgent element is the recruiting of teachers, first to supply the vacancies unhappily caused by the war, and secondly, to staff the new schools which should be built at once to provide secondary education for the large number who are now asking for it in vain.

The special activities of the schools in connection with the war receive due recognition. Some 14,000 elementary schools are carrying out War Savings schemes, and in one South Wales school 3,000 War Savings Certificates were sold during one week, while a school in the Midlands invested an average of over £100 a week during two years. Food economy was taught by means of the Domestic Science classes, and the teachers of this subject gave great help in the management of canteens for the Army as well as in the National Kitchens and in Hospitals. Active steps were taken to increase the food supply by means of school gardens, and during the year 123 acres were thus brought under cultivation, 806 new gardens being formed. The collection of wild fruit was also undertaken, and in spite of many difficulties great success was achieved. In Gloucestershire alone 313 tons of blackberries were gathered through the efforts of public elementary schools. Salvage work of many kinds was undertaken, and the Director General of National Service has acknowledged in a special letter of thanks the value of the efforts made to collect nut-shells and fruit-stones for use in making charcoal for the anti-gas mask. All these activities were undertaken with great ardour, and their effect is in harmony with the true object of education, since they have quickened the sense of public service and public duty, teaching the children to sacrifice self for the common good. The result has been dearly bought, it is true, but it may prove to be increasingly valuable if we are led to see that our schools should be something more than places of formal instruction. They ought to be centres of corporate life and training grounds in civic obligation. It is in these directions that the continuation schools may perform their greatest service, confirming and supplementing the necessarily brief training of the elementary school.

The Board continue to hold out encouragement and aid to experimental work in education. Special grants are given for approved new departures, and we are told that a grant has been promised to a girls' school in Durham for an experimental course in Esperanto. Visits of observation were paid by four teachers in secondary schools, and the arrangements for employing “Assistants” under the convention with the French Ministry of Education was extended to include duly recommended Belgian teachers. Eighteen “assistants” are now employed. Admirable as these various departures are, they are too small in scope. Possibly some fault lies with the schools in failing to make fuller use of the Board's liberality. Certainly there ought to be a greater use of experimental work and visits of observation. It is too little recognised that the “science” of education must be built up by teachers themselves.

An interesting section of the Report gives details of gifts and bequests to Universities. These reached the large total of £413,000 during the year, in addition to two grants of £300 a year made by the Governments of Greece and Portugal respectively for the encouragement of the study of modern Greek and of the Portuguese language. The intended assumption by the State of responsibility for education has not yet dried up the springs of private generosity, and gifts already announced will probably ensure for next year an even greater total of such gifts.

The supreme and most pressing problem remains. It is that of obtaining an adequate supply of efficient teachers. Exact figures as to secondary schools are not given, but those for elementary schools are very significant. In 1908 the total of entrants was 9,614, and in 1917 it was only 6,260. The decline is serious, and the Board state that there is so far no sign that it is likely to be arrested. Since an annual recruiting of 9,000 is essential for the continued working of the elementary schools it is evident that prompt measures are needed, especially when we remember that some 30,000 new teachers will be required for the continuation schools. Everything seems to point to the necessity for establishing teaching on the basis of a profession, with a rate of remuneration and conditions of service such as will attract men and women of ability. The Report emphasises with justice the importance of recent measures in the direction of improved salary scales and pensions, but the disquieting fact is that these improvements have hardly kept pace with the increase in the cost of living. Something more is still required if we are to attract the teachers we need, and it is unfortunately impossible for us to accept the Board's statement that "the difficulties arising from the poor prospects of the teaching profession are now at least in a fair way to be remedied." The new Education Act seeks to throw the responsibility for recruiting teachers upon the shoulders of Local Authority. This attempt will fail unless the Board resolves to do everything in its power to develop the idea of a unified teaching profession, with an established status, and a proper measure of control over such matters as the standard of entry, the conditions of work, and the building up of a body of recognised professional technique.

#### Mr. Fisher on Teachers' Strikes.

The President of the Board of Education, addressing a conference of the Dorset Association of Teachers at Dorchester, on June 28, said that the expenditure on teachers' salaries in the past two years had increased by 32 per cent., and these figures did not represent the high-water mark. He noticed there was still a considerable amount of unrest. He had heard of strikes or threatened strikes of teachers and of differences between Education Committees and teachers. As one of the profession he made every allowance for the hardships of the poor teacher, but he wanted to urge the teachers to remember that in the long run the standard of remuneration of teachers in this country would depend upon the estimate which the community placed upon their character and services. They had to remember that a teachers' strike was unlike any other strike. The people who would be injured would not be the employer, but the children in the schools, and however justified a strike might be from the purely trade union point of view, they might be sure that a teachers' strike would undoubtedly tend to lower the estimation in which teachers were held, and would in the long run tend to injure the prospects of the profession.

## THE PLAY WAY IN LANCASHIRE.

By B. A. WILLMOTT.

### I.—PROSE.

SOME critics of the Play Way have carelessly asserted that what Mr. Caldwell Cook can do, others, because they lack his personality, cannot. This view I wish to counter by unfolding my own experiences in Littleman's Land, and, as I was demobilised last December and proceed to Oxford next October, I can claim neither teaching experience nor a University career. I assume those who read this to be acquainted with the Play Way's aims and methods, to develop the literary soul in every child, so that it bloom before the snows of much knowledge fall, by wooing it, not wrenching it from the bud, or crushing it within. I shall but deal with results.

On arriving in the lowest form of a typical Lancashire co-educational secondary school, I was shocked by the barefaced materialism pervading the compositions. When told to describe a rainy day, half the children gave a scientific explanation of rainfall, while half said they did not like it, because it was nasty, horrid, or disagreeable; the only point of interest was a mention of crowded trams and shop doorways by one child, who was immediately incited to tell of similar things typical of a rainy day: bubbling gutters, empty streets, bedraggled dogs, miserable policemen. All were then told to write a description of a rainy day, or else, in contrast, of a midsummer's day, for homework. The results were surprisingly meagre, and I decided to leave description for humour. Yet here is something that shows the two styles, like a clear and a muddy stream flowing together unmingled.

#### "RAIN" :—

"Sometimes we wish for rain, but that is only in the hot weather, when the sun scorches us. Some people wear oilskin macintoshes and waterproof cloaks and coats. When it is raining you cannot see many people about the streets. Some of those people who are forced to be in the rain hurry quickly to their destination. The rain looks like bits of crystal falling from heaven such as people read of in fairy stories. It reminds us of a fairy wedding, where instead of throwing confetti they throw jewels and precious stones."

Note the actual questions I led them on with.

Next I asked for the adventures of pussy in the pantry, obtaining mediocre results throughout, of which these are typical.

#### "A BAD CAT" :—

"I stole into the pantry one day, where I found some fish. I ate it all and then walked a little way up the pantry. Suddenly I came to some milk in a jug. I drank half the milk. I then tried to get my head out because I had had enough, but to my dismay I found my head was fast. I had to wait like that till someone came. Suddenly the mistress came along and got my head out, and then sent me out into the cold all night."

#### "A GOOD CAT" :—

"The mistress discovered that a mouse had been in the pantry, so she placed me on guard. The first night I did not see the mouse, but the next night I saw him feeding on a piece of cheese. I jumped at him and succeeded in catching him. For my brave action my mistress gave me an extra cup of milk."

Still dissatisfied, I turned to sheer beauty for subject, and as I ought to have expected, succeeded immediately. I read out the Sky Series from Perse Playbook No. 4, which includes Twilight, Night, Dawn, Day, The Stars, and kindred subjects, each of which was attempted by someone, and almost all successfully. All the instructions I gave were: "Write beautiful thoughts in beautiful language." Here are two of them.

"THE MOON":—

"The milk-white moon came out one night, for it was the fairies' eve. The fairies were having a ball and so he smiled upon the wood. The green trees glistened and swayed about in the gentle breeze as he sang to the fairies' dance. The moon felt lonely up in the skies for he'd none to dance with him. So the fairies rose and became the stars to keep him company on that dark and dreamy night."

"THE WIND":—

"March is the month when the Wind decides to take a stroll round the earth. He is a cunning fellow and loves to tease the sweet flowers; even the people are seen struggling against him with all their might. We cannot see the wind himself, but we can see the poor bare trees, their branches nearly torn off by the frolicking wind. Then after doing much mischief, he goes home to his dwelling place to give himself and the world a rest. But we are not surprised if we see him again the next day, for Master Wind is a fellow who is hardly ever tired."

I then invited all to suggest their own subjects, and the authoress of "The Moon" produced "Baby Asleep." Others, "How the Fairies Came to Earth," "Snow upon the Hills," "The Old Church" (not descriptive but emotional), "Evening," and so forth. *I had given just three lessons.*

"EVENING":—

"The evening was cool and everything looked bright and merry. The little birds sat twittering for their young ones to come home. Now it is getting dark and the mother bird is feeling frightened, for her baby bird has not yet returned."

Determined to extract some humour out of them, I found a copy of "Just So Stories," circulating it round the class, meanwhile asking "had not anyone ever read a funny book, such as 'Alice in Wonderland'?" I then suggested a dialogue between the frog who would a-woooing go and his mother who would not let him. This itself was spoilt by most, as they forgot froggie was not a human being, but the wealth of humour shown by all was astonishing, and a crowd of subjects cropped up from all sources, one of which, drawn from my circulating Palgrave, I give, exactly as shown up by the bottom but one in the class.

"THE CAT AND THE FISH":—

"Tiddums the cat: Come here, my pretty goldfish, quite a tasty dish you will make me.

"Wagtail the fish: No, no, my ugly cat, I do not like sharp teeth and paws.

"T.: Then I shall spit at you.

"W.: You can't, because I shall dive away.

"T.: Then I shall dive after you.

"W.: If you do you will never get out again, because I shall tie your tail to a rock.

"T.: One, two, three, go!

"W.: You have brought your own death through being foolish.

"T.: Bubble, bubble, bubble, gurgle, gurgle, gurgle, oh, oh, oh, oh!"

With regard to spelling, may I hint that the abolition of conventional spelling and the return to Elizabethan freedom is a possible solution to the problem of spelling reform? I have never seen the inherent advantage of fixed spelling, although I dutifully support the convention's authority.

Now, I found the children would do any kind of prose, poetic, humorous, or narrative, in most cases spontaneously, save that descriptive work was still a notable failure. So in setting the terminal paper I submitted perhaps a dozen subjects, soliloquies, dialogues, narratives, humour, character, one to be chosen and perfected, and omitted description; but a chorus demanded its insertion, and I fain would give the whole of one child's "Green Days in Forests."

This term I arrive back to find enthusiasm as deep-rooted as ever, and in haste suggesting "Things I like," or "Things I don't like," as a trail leading towards description, the point still to be rounded up. I am deluged with descriptions of shady nooks, country tours, woodland rambles, a sea view, and even, from the humorist authoress of "Gurgle" and "First Day in the Ark," a Music Lesson!

What do they read? The great authors and the great stylists. For subject matter, Chaucer, Spenser, Homer, "Beowulf"; for style, Hawthorne, Kingsley, Stevenson, Kipling; works of simple charm, abounding in imagery, and meanwhile much great poetry, and never a mediocrity. Then one diagnoses the taste of each child, and directs this one to "The Three Musketeers," another to "Ivanhoe," a third to "Oliver Twist"; giving them what will either stimulate their interest or open up new vistas of style or subject; of course saying, not "Read this!" but "Have you read this?" Great literature is literature dealing beautifully with subjects of permanent human interest. Is this interest foreign to the child? Surely then much can be found to fall within those spheres of human interest which the child has already entered.

I omit much; the character sketch of an angry man (a sickening eye-opener to slum life), fables (stimulated by Lafontaine and Æsop), interviews by special correspondents, and the general effect upon historical and geographical composition.

But if I, an untrained teacher, can persuade a form of dunces to go thus far, what could not trained teachers do? As Mr. Cook says, if all teachers would no longer regard children as the young of man, but admit there is more poetry in them as a whole than in adults as a whole, what a child's garden of literature should we not stumble into unawares? We should be Greeks again!

#### Sir Edward Fry Memorial Prize.

The Bribery and Secret Commissions Prevention League Incorporated, has decided to extend the time in which teachers and others engaged in educational work, and also University students, can compete for the Sir Edward Fry Memorial Prize for the best essay on instruction in continuation schools on the subject of bribery. The competition will remain open, therefore, until September 20th. Particulars can be obtained from the Secretary of the League, 9, Queen Street Place, London, E.C. 4.

## DOES THE UNIVERSITY MENACE THE SCHOOL ?

By DOUGLAS MAPLES, M.A.,

Fellow in Education, University of Pennsylvania.

ANY enumeration of the effects upon education of the recent war can hardly fail to include the rapid increase in number and extent of vocational schools and of teachers' associations. Both are significant. In the vocational school and its variations, the business world is clearly seeking a substitute for the existing 'general course of instruction.' It seeks to include all essentials in the vocational school rather than merely to supplement the general course by training in a vocation. The various associations of teachers in state, private, secondary, and elementary schools have for their general aim the more thorough standardisation of the school as a social institution and of school teaching as a profession. Since the apostles of the vocational school and the teachers of the state schools fairly represent the two extremes of the social tendency indicated by the Fisher Act, the entire movement appears to mean simply a further shifting of the educational responsibility,—originally from the cloister to the university, thence to the schoolmaster, and now more directly to society itself. It is with the function of the university in this last stage that these remarks have to deal.

First it is necessary to mention the existing points of contact between the university and the school as affecting the social utility of the latter. As regards the teacher there is abundant evidence to show that secondary and elementary school salaries depend very largely upon the extent and quality of university work, and also that no really prominent positions are obtainable without it. One might therefore expect the school to ape the university in methods of instruction, in requirements for admission, promotion, and graduation, and in the selection of curriculum studies with a view toward university matriculation. The logical effect of this on the pupil is to develop an aspiration to the university degree which, if beyond his means or powers to attain, may defeat the school's more legitimate efforts to prepare him for the work he is best fitted for. In this manner might readily be formed the vicious circle in which the teacher endlessly teaches the young to teach the young, while pupils unsuited for university work go their benighted ways unaffected.

It has been suggested that the present tendency may be regarded as a protest against this evil so far as it obtains, and that the teachers' associations declare, in effect, their independence from university and all outside control. In seeking to define the social duties of the university with respect to the school it is difficult to avoid discussion of minor aspects of the problem affecting particular localities. Yet these must be avoided if the position of the school is to be viewed impartially from the social standpoint.

America offers a fair analogy for this study. Conditions obtain there which correspond closely enough to those above mentioned. The value of the teacher's university training is practically identical in both countries. Except where sentiment places the premium of high salary upon long service in one school where a more efficient teacher might be obtained for less money, the salary is invariably determined by years of post-training school study. While it is true that a smaller proportion of the members of American school

boards are university graduates than in England, it is no less true that the plums of the teaching profession are reserved for university trained men. Though this emphasis of university training has very largely affected the methods and requirements of the older private schools whose main object is preparation for the university, and also has affected the leaving requirements of the state schools to some degree, the curriculum of the state schools is very largely determined by public opinion. For instance, penmanship, drawing, manual training, music, and physical training have all been introduced as the result of experiments conducted first by social organisations and later adopted by the schools at public expense. Thus the adoption of physical training is directly the result of the efforts of the Y.M.C.A. and of the German Turners societies. Yet as the period of matriculation examinations is approached the influence of the university can be seen in the increasing severity of school requirements, indicated by the more frequent promotions in the lower as opposed to the higher standards. Nor is this failure in the higher standards due to variation in the proportion of class ability, for official records establish the fact that the best pupils tend to complete the secondary course. The American state school is therefore comparable to the English in that it effects a compromise between the university requirements and the needs of the individual pupil.

Ignoring the well known efficiency of the American university as a professional school, in which respect it is about equal to the English, to what extent does it prepare for other vocations? Reply to this question must distinguish the origin of the American state university from that of other universities both in America and in England. Over half a century ago, on July 2, 1862, the United States congress passed the Morrill Act, which appropriated 30,000 acres of public land for each congressman for "the endowment, support, and maintenance of at least one college where the leading object shall be, without excluding other scientific and classical studies and including military tactics, to teach such branches of learning as are related to agriculture and the mechanical arts . . . in order to promote the liberal and practical education of the industrial classes in the pursuits and professions of life." In course of development these institutions have bifurcated, so that later we find in addition to the original college both secondary schools attached to the college and graduate schools for the prosecution of professional research. As the instruction offered by any one of the three schools appeared more attractive than that of the other two, these latter were modified so that emphasis might be effectively distributed. Illustration of this process may best be seen in the subjects of agriculture and medicine. For example, in 1888 the University of Minnesota opened a college of agriculture which is still carried on alongside the school of agriculture. "In 1909-10 the college registered 238 students and the school 704 students, beside 681 persons registered in the agricultural summer courses, farmers' short courses, etc. Secondary schools or departments have now been largely given up as the system of high schools has gained strength and stability. Minnesota gave up secondary work save in agriculture in 1891, California in 1907, and Illinois in 1911; Florida, Kentucky, and Utah transformed the preparatory department into a model school for their departments of education; ten state universities still maintain from

one to four years of a secondary course. In the case of medicine the process has been reversed, medical instruction having been taken from the school and vested in the university, so that in eleven states all medical instruction in the state is concentrated in the state university. It is by virtue of this flexible system that the state university supplements school training in preparation to life. First by offering free of charge instruction in those subjects which cannot for lack of time or equipment be effectively taught at school, the university ensures that the pupil is introduced to the essentials of culture and of progressive social interests. Secondly, by allowing the pupil to specialise in the study of his chosen vocation, the university is able to present this vocation in its widest aspects.

Concerning the state university as the instrument of social as distinct from individual progress, the following statement by Professor Monroe, of Columbia University, may well stand without addition: "In affiliation with many of the state universities or as organic parts of them, are various administrative or research bodies, under the control of some university officer. Illustration of these are the State Conservation Commission, State Geological Survey, and Bureau of Plant Diseases and Destructive Insects, at the University of Nebraska; and the State Laboratory of Natural History, the State Entomologists' office, the State Board of Examiners in Accountancy, the State Geological Survey, and the State Water Survey, at the University of Illinois. Unfortunately the legislature has not always kept clear the distinction between research work and scientific exploration and survey, on the one hand, which may properly be undertaken by the state university, and routine work of analysis, inspection, etc., on the other, which should be placed with a purely administrative office. The real meaning of the movement to assign these various functions to the state university becomes clearer year by year; they indicate, as President Van Hise of the University of Wisconsin well said, a settled recognition of the state university as the expert advisor of the state in the fields of science, industry, economics, administration, agriculture, engineering, and social problems, in addition to its great function as the teacher and ennobler of the youth of the state.

While some discount may be safely allowed for professional enthusiasm in the above statement, the writer can testify that the dependence of local government officials upon university research is close and valuable to both. It would seem that the attainment of such an ideal in England must go far to reconcile town and gown, and it is likely that the university might provide more satisfactory members of royal commissions than parliament if it is true that intellect prefers leisure to political distinction.

This brief sketch has nothing to do with specific proposals for the realisation of greater social utility in the English university nor with many other fundamental implications of the topic. It is obvious that in many respects the English university is more active socially than the American, notably in the system of university extension introduced by Professor James Stuart at Cambridge in 1866. Yet if the present tendency to forswear educational tradition in the state schools for more immediate social returns is to take effect without cheapening the intellectual quality of the product, it would seem that further progress in this direction is imperative.

## CHRONICLE OF EDUCATION.

- 17 June.—Convocation of Oxford rejects the proposed Statute abolishing compulsory Greek in Responsions.
- 21 June.—Surrey Education Conference at Sutton, Mr. H. Neville presiding. Addresses by Miss Agutter on "Central Schools for Girls"; Mr. J. W. Samuel, on "Ideals in Educational Reconstruction"; and Mr. H. C. J. Cooper, on "The Effect of the Montessori System upon Children above the Age of Infants."
- 27 June.—Meeting of past and present Students of Leeds Central High School to bid farewell to the Principal, Dr. Forsyth, who is retiring after 30 years' service.
- 28 June.—The President of the Board of Education at Dorchester. Address to the Dorset Teachers' Association.
- 28 June.—Signing of Treaty of Peace with Germany.
- 6 July.—Peace Thanksgiving Day.
- 8 July.—Eugenics Education Society. Annual Address at Bedford College, "How a Knowledge of Eugenics will help Imperial Development," Major Leonard Darwin presiding.

## COMING EVENTS.

- 19 July.—Official Peace Celebrations.
- 25 July.—Opening of Conference of New Ideals in Education at Cambridge, Lord Lytton presiding. The Conference lasts until August 1st. Among the speakers will be Lord Haldane, Professor Rothenstein, Mr. Geoffrey Shaw, Professor Lethaby, Mr. Morley Fletcher, and Mr. John Drinkwater.

## Some Appointments.

Sir Henry Hadow, Principal of the Armstrong College, Newcastle-upon-Tyne, to be Vice-Chancellor of the University of Sheffield.

Dr. A. H. Trow, Professor of Botany in the College, to be Principal of the University College of South Wales, Cardiff.

Dr. F. E. Sandbach, Lecturer in German, to be Professor of German in the University of Birmingham.

Dr. Charles W. Valentine, Professor of Education, Belfast, to be Professor of Education in the University of Birmingham.

Mr. J. Oliver Thomson, M.A., to be Professor of Latin in the University of Birmingham.

Mr. C. Birchenough, M.A., Lecturer on Education in the University of Sheffield, and Professor A. E. Dean, M.A., of University College, Exeter, to be Inspectors of schools under the Kent Education Committee.

Mr. W. H. Perkins, M.Sc., to be Chief Organiser for Day Continuation Schools and Technical Schools under the Lancashire Education Committee.

Mr. T. Dean, M.A., M.Sc., Headmaster of Swindon Secondary School, to be Headmaster of Tiffin's School, Kingston-on-Thames.

## SUBJECTS AND METHODS.

### Mental Deficiency in Children.

In a report on "backward" and mentally deficient children attending the elementary schools of Wrexham, Dr. H. Drinkwater, the acting school medical officer, states that in the course of his investigations 137 children were examined. Of this number 58 were mentally defective, 37 were suffering from poor physique, or sub-normal nutrition, while 35 were affected by adenoids and enlarged tonsils. Those of poor physique and sub-normal nutrition were feeble and wanting in energy, often listless and inattentive, and in some cases showed signs of not having sufficient sleep.

Nine children had defective eyesight, and several of these were not wearing the spectacles that had been prescribed for them; the glasses had been lost, or broken, or forgotten.

Thirteen children had a small brain. He had measured the circumference of the heads of nearly all the children, and found that some of them were so small that it was hopeless ever to expect them to have normal mental powers. Nasal catarrh, of which there were twenty cases, was mostly due to neglect of the handkerchief. Only six backward children were employed for pay outside school hours; most of the children so employed were the normal and brighter ones. Fifty-five cases of backwardness arose from irregular attendance.

'The system of elementary education,' proceeded Dr. Drinkwater, discussing unsuitable or uncongenial instruction, "is based on the assumption that children are identical, or at any rate that they resemble one another very closely in their aptitude for learning. There could not be a greater blunder. As a matter of fact, children differ very widely, and show every degree of ability from the very clever to the very dull. There are some who learn readily, without much effort, whilst others, owing to congenital defects, are wholly incapable of learning the subjects included in the school curriculum, and are, therefore, incapable of benefiting by the instruction provided for them in the ordinary elementary schools. The aim should be to educate, develop, or train the faculties or powers of which the child is possessed; it is perfectly useless to try to train faculties which are absent. . . . It is an undoubted and well-established fact that many a feeble-minded child shows special and unusual ability in certain directions, especially in work which can be done with the hands—*e.g.*, drawing, woodwork, needlework, basketwork, and gardening."

As regards retardation, Dr. Drinkwater reports that 43 children were from three to five standards behind in comparison with the average child. It was gratifying to be able to report that a very great improvement had taken place in regard to uncleanliness, especially with reference to children's heads, but the state of affairs was still far from satisfactory. The children were not taught as they ought to be) to wash themselves: some looked as if soap was never used for cleansing their skin or clothing. The association of the mentally defective child with other children in the ordinary class was a great tax upon the teachers, tended to hinder the progress of the normal children, and was an injustice to the feeble-minded child itself.

### Unemployment Centres in London.

A LONDON Teacher recently sent to "The Daily Herald" the following interesting note on teaching in an Unemployment Centre.

Most people are by now aware that "young persons" under the age of eighteen have been receiving their unemployment benefit—14s. 6d. for boys and 12s. 6d. for girls—only on condition that they attend certain schools specially provided for the purpose by the Board of Education. Most of these schools have now had a clear run of at least three months; and among the teachers in them there has grown up a manner of working and method of approach which show that, although the problem has been in so many respects overwhelmingly new, it has already begun to teach its own lesson.

It was difficult enough at first. The element of compulsion in the scheme increased the boys' natural unwillingness to be put under restraint. After the freer life of factory and workshop it is not very easy to submit to the narrow school discipline. And even the most enlightened superintendent could not have his school turned into a bear-garden. When this initial difficulty was overcome the real problem began to show itself. Here, at last, in these centres, the worker has been brought back into the schoolroom. If there had been no interval of working life the problem might have stood on an artificial basis, for in the impressionable adolescent years the boy or girl might be made to think they needed merely what was made pleasant to them. But the boys and girls had begun to realise what they wanted, and were in a stage to have their needs supplied. Education is the provision for the real needs of the individual. What, then, did the experiment show? It showed, first of all, how much had been forgotten since leaving school. And here, at the very outset, the teacher discovered anew an important principle in education—that the elementary subjects can best be taught when they are combined with practical issues in the life of the learner. Ask the boy a question about formal grammar; he would be flabbergasted. Set him to write what he thinks about some interesting subject, such as the Centre itself, or "Should girls be paid at the same rates as boys?" and you would get a piece of work in intelligible and fairly correct English.

But when we come to the less elementary part of the work the problem becomes at once newer and more difficult. Here the teacher who was most accustomed to the ordinary school routine found himself most at sea. Many of the boys had been in wood or metal workshops of one kind or another; it was thought, therefore, at the beginning, a good plan to give them some instruction in drawing and geometrical calculation. But it was soon found that this sort of work was done listlessly; give the boy, however, something to do with his hands, and he would at once brighten up. Further, let him play about with and look at a piece of machinery, and you could get him to explain it to you better than he could have done after half-a-dozen lessons on the theory of it. In such things as history it was very much the same. Begin with antiquities, and you would get little attention, but begin by explaining some of the causes of the war, and you could widen your field and go back further and further until you covered all Europe and ten centuries without loss of attention.

What is the conclusion of all this? It is that education does not consist of certain ideas and formulæ which all must learn; does not, in fact, consist of "culture" in the narrower sense. A man can be very well educated without having read a single line of Shakespeare, though it is true that a man who knows Shakespeare cannot be said to be uneducated. It is simply a waste of time to try to give everyone an education through books; but what is absolutely necessary is to see that everyone is educated through the work he does and the way he is helped to think about it. To give a man "ideas" by pouring them down his throat is to make him the prey of every axe-grinder; to give them him by letting them grow out of his own life as he thinks about it is truly to educate him. The new Day Continuation Schools bear a great responsibility towards the men and women of the future; will they learn from the past?

## EDUCATION ABROAD.

### Cologne—A New German University.

(FROM OUR OWN CORRESPONDENT.)

IN the troubled days of the dying 18th century, the ancient University of Cologne closed its doors, and now, by the irony of fate, the troubled hour in which we live has thrown them open again.

The University of Cologne is the second oldest in Germany, having been founded in 1389, a year later than Heidelberg. Throughout the 19th century the leaders of the spiritual and intellectual life of Cologne laboured for the restoration of their University, but without success in the days of prosperity and peace; the fruition of their hopes and labours is due directly to the war and to the conditions created by the war.

The charter of the new University was signed on May 28 last and on June 12, in the presence of a numerous assembly of the citizens of Cologne and of the leading representatives of its civic and intellectual life, the University was formally opened by Dr. Becker, an Under-Secretary of State, on behalf of Dr. Haenisch, the Minister of Education. The ceremony was held in the large *Festsaal* of the *Gürzenich*, the 15th century building in which Cologne dispenses its civic hospitalities. The hall was decked for the occasion with flags and plants, but the curious noticed the absence of the brilliant uniforms and orders that would have adorned the scene in other days. Speeches were delivered by representatives of City and University, and in the intervals the choir of the *Domkirche* and the leading choral societies of the town, which claims pre-eminence as a musical centre, gave admirable renderings of the "Meistersinger Overture," the Hallelujah Chorus from "The Messiah," and Brahms's "Akademische Festouverture."

The new University will have faculties of Philosophy, Economics and Medicine, and will be housed in the *Handel-Hochschule*, a handsome modern building in early 18th century style, facing an extensive public garden or park and overlooking the Rhine. There are spacious courts with playing fountains, an Aula, numerous lecture and class-rooms, museums, and a library, containing some 60,000 volumes, devoted mainly to Economic Science.

The speeches delivered in the *Gürzenich*, on the occasion of the inaugural ceremony, by the Oberbürgermeister of Cologne, the Rektor of the University, and Dr. Becker deserve serious consideration, for they seem to reflect the mood and thought of the intellectuals of the newer Germany. They appear to evidence a national consciousness that the stupendous disaster that has befallen Germany has been due to moral rather than to material causes, and that only a spiritual regeneration can repair the shattered fabric of German life or restore Germany to a place among the nations. And while they testify to the need of a re-birth of the German spirit they adumbrate important changes in German educational ideals and methods that deserve the closest attention.

The high mission of the German Universities, and in particular of the revived University of Western Germany, was the theme of Oberbürgermeister Adenauer, whose speech was reminiscent of the mediæval glories of the old University of Cologne, and of the earlier association with Cologne of the great names of Albertus, Thomas Aquinas, and Duns Scotus.

"A great past is an obligation. It is an obligation to strive after a still greater future. Future! What a black shadow the word casts upon the joy of our festival. Have we a future? Dark is the future of this city. Dark is the future of this people. The German might is broken, and the enemy is within our gates. . . . Within our land wanders the spirit of dissension and of revolt, the spirit of Spartacus and of Bolshevism. Dark and black lies the future before us. Nevertheless we need not despair. We have a future. We believe in the German people. It will be restored to health, it will come forth purified from this purgatory; full of strength and health, it will take its place again among the peoples of the globe. To co-operate in the work of the restoration of our people, that is the immediate high task of the University of Cologne. It will further the work of inner purification, in co-operation with its sister Universities, by cultivating true science and wisdom, true freedom and morality.

But over and above this there falls to the University of Cologne a particular task. Here on the Rhine, on this old highway of the peoples, German culture during the next decades will encounter the culture of the western democracies. If their reconciliation is not accomplished, if the European peoples do not learn, over and above the legitimate preservation of what is special to each of them, to recognise and to cultivate what is common to all European cultures, if a cultural *rapprochement* cannot again unite them, if in this way a new war between the European peoples cannot be prevented, then is Europe's pre-eminence in the world permanently lost. To further the high work of the permanent reconciliation of peoples will be the special mission of the University of Cologne, the University in the West German metropolis. Once before has the University of Cologne fulfilled a like mission, when, founded on the model of the famous Sorbonne, it attached to itself as did no other German University numerous foreigners and acquainted them with German life and German *Geist*. The University of Cologne will preserve German culture for the German races on the Rhine. It will communicate true German science to foreign lands, and in exchange will receive what is good in their cultures, and transmit it to the German people. But before all, it will show the relationship of all European cultures, it will show that between all European peoples there is much more to unite than to separate. To promote a true union of peoples, to further the progress of the nations to a higher stage in their development, will be its holy call."

Dr. Becker then read a message of greeting from the Minister of Education. "May the new University of Cologne," wrote the Minister, "be an earnest and a sign that the German spirit, still to-day Germany's better part, is yet unbroken, and in the midst of defeat is powerfully at work to build up and to create anew. It will be the particular task of your University to help to build over the sea of blood and tears of these latter years, new bridges towards the West, but it can only fulfil this task of reconciling and binding together the peoples if it is itself deep-rooted in the soil of the Homeland."

Dr. Becker spoke of the necessity of national self-confidence. "The German faith we need is above all a faith in ourselves. After the German 'might-idea' has been broken, there rises a German 'culture-idea' like the phoenix from its ashes. We must learn to believe that we are more than a mish-mash of peoples in middle Europe, that we are a united nation, and that we shall be of importance again, in the rank of peoples, only when we have found ourselves, when we become a people that are held together not by the sword and military might, but by a strong national consciousness of a common culture. It will be for our German Universities a responsible task to rebuild our whole system of education. From the haste and hurry of the period before the war, from the over-intellectuality and materialism which had almost overwhelmed us, we must return to the genuine German cultivation of the humanities, to the cultivation of the individual and of the ethical life. Referring to the neighbouring University of Bonn, Dr. Becker expressed the hope that from the emulation of the two universities good might result for both, and that the time to come would reveal an ideal community of aims and efforts between them.

Dr. Becker concluded with a defence of academic freedom. "If," he said, "it has in recent times become self-evident that science is no longer the handmaid of the Church, it is equally certain that it is not the handmaid of the State and still less of any parties or interests. Maintain in the presence of the public and of the State and Government the genuine 'spirit of protest' of German science. A strong University in a strong State."

The Rektor of the University, *Geheimrat* Professor Dr. Eckert, in his address, dealt principally with questions of University policy and with the measures of reform which are the outcome of German experience of the defects in their former educational system brought to light in the fiery ordeal of war. The day, he said, of professionalism and a purely technical training is past. Technical skill must have its basis in a sound general education. Teaching and Research are both legitimate activities of a University, but the two functions are distinct and should be kept separate and apart. Further in the work of the University there should be close collaboration between the savant and the man with practical knowledge and experience, and the lecture system should be supplemented by direct intellectual intercourse between teacher and students. Finally the Rektor advocated that the Universities should be as accessible as possible to the intellectually gifted, and that the students should be admitted to a share in the government of the Universities.

## SCHOOLS, COLLEGES, AND UNIVERSITIES.

### Oxford University.

Sir Heath Harrison, formerly shipowner of Liverpool, has offered the University of Oxford the sum of £25,000. The proceeds of this sum are to be expended, as to not more than one-fourth of the annual income, in providing instruction within the University in French and other modern European languages, and as to the rest of the income in the institution of travelling scholarships. It is provided that such travelling scholarships shall be held exclusively by natural-born British subjects and being undergraduate members of the University of Oxford, while studying French or other modern European languages in foreign countries.

### London University.

The Organising Secretary writes from University College, London, W.C. 1.:—A war memorial scheme for University College Hospital and Medical School, London, has now been settled, and an appeal for a sum of £30,000 is being issued to all old students of the College whose addresses are known. The complete scheme, as settled by a representative and influential Committee, includes the following features:—A war memorial album, containing the records of the academic and service careers of the 208 men who have fallen; memorial tablets, recording their names; scholarships for the sons and daughters of the fallen; a great hall for the use of the College and Medical School; the endowment of University College Hall, Ealing. The hon. treasurer is Captain Wedgwood Benn, D.S.O., D.F.C., M.P., who is a Fellow of the College. Donations sent to him at University College will be gratefully acknowledged.

### Manchester Grammar School.

At a special meeting of the Governors of the Manchester Grammar School, a gift of £5,000 to the school from Sir Thomas P. Latham, who is an old Mancunian, was reported. The donor desired the gift to be entirely free from conditions. The Governors thanked Sir Thomas, and decided that the amount should be incorporated with the war memorial fund now being raised to provide new chemical laboratories for the school, and also that the donor should be requested to allow his name to be permanently associated with one of the laboratories, when built.

### Dewsbury Continuation School.

The Dewsbury Day Continuation School has been opened at the Dewsbury Technical School. On Monday, June 16, the first boys and girls presented themselves at the school, and since then there have been fresh contingents of pupils each morning. Altogether the number on the roll is about 500, approximately 200 boys and 300 girls between the ages of thirteen and sixteen. It is a voluntary institution, started with the object of anticipating the compulsory clauses of last year's Education Act. So far fifteen Dewsbury firms have accorded their youthful employees the privilege of attending the school without reducing their wages, and in addition to the large firms quite a number of smaller firms, shopkeepers, and mistresses who have domestic servants are permitting their one or two boy or girl employees to attend. In addition to attending one day per week they will be required to attend on every fifth Saturday morning. Mr. Taylor, headmaster, has a staff of two men and three women assistants.

### Westfield College Scholarships.

The Council of Westfield College have awarded Scholarships as follows:—

Dudin Brown Scholarship of £50 a year for three years to Evelyn Mary Moore, Fulham County Secondary School, for History.

Old Students' Scholarship of £50 a year for three years to Dorothy Smith, Hanson Girls' Secondary School, Bradford, for Botany.

The Goldsmiths' Scholarship of £50 a year for three years has been awarded to

Gwen Dorothy Griffiths, St. Saviour's and St. Olave's Grammar School, New Kent Road, for English.

A Bursary of £50 a year for three years to

Miss Anna Bjarnadóttir of the University of Iceland, for English. The Council has also offered Research Studentships for post-graduate work to

Miss Eveline C. Martin, an old student of the College, who will work for an M.A. thesis in Colonial History, and to Miss Julia Grace Wales, graduate of McGill and Harvard Universities, and Instructor in English at Wisconsin University, who will complete her thesis for a Doctor's Degree.

## BLUE BOOK SUMMARY.

### Teaching in Continuation Schools.

The Board of Education have issued a Circular (1115) entitled "Notes on Teaching in Continuation Schools as a Career." The document begins by describing the purpose of the new institutions, reminding us that hitherto many boys and girls have had to end their regular education when they left the elementary school, and that the Evening Schools were a poor substitute for the right means of training youth. Henceforth, and from some date still to be fixed for each county and town, no child will be allowed to leave the Elementary School until it has turned 14, and every boy and girl between 14 and 16 who is not at a regular school will have to attend for further education at a Continuation School, during about 300 hours in the year. This further education will be in the daytime.

Teachers will be needed for these schools to the number of 30,000 when the schools are fully at work. The Notes urge that suitable people should consider whether this is not a form of work which they can do well and enjoy. It is added that "A teacher's job is not altogether an easy one, and it does not generally lead to fame; still less to great riches. But it has its compensations. You are moulding human lives; and upon the kind of men and women who teach to-day depends the kind of men and women who will be citizens of our country to-morrow." This appeal on social grounds is supported by the statement that work in Continuation Schools will be "exceptionally interesting" and that "the material conditions ought to be pretty good." An initial salary of £150 to £180 is mentioned, with possibilities of promotion and the guarantee of a pension.

As to qualifications, it is suggested that the right character and temperament come first; then knowledge, and a University course is advised, with a course in science and mathematics, or in English and history. Those who have no turn for academic subjects are told to take a course qualifying them as specialist teachers of housecraft, gardening, or physical exercises. In our view it is unfortunate that the Notes do not state that such specialist teachers will be placed on the same footing as graduates provided that their qualifications and training in teaching are good. As to training in teaching, the Notes rightly suggest that the intending teacher should acquire some knowledge of the working life of the pupils and some familiarity with work in Settlements and other social organisations, in addition to the necessary study of the technique of teaching.

Some practical advice follows on the method of securing an appointment, and applicants are referred to Local Education Authorities or to employers who are establishing Works Schools. The pamphlet is a timely attempt to grapple with the chief difficulty which presents itself in connection with the establishment of Continuation Schools and threatens to render of no avail the most valuable part of the Education Act.

### French Assistant Teachers in English Secondary Schools.

Under the Convention between the Board of Education and the French Minister of Education, young French Secondary School Masters and Mistresses recommended by their Ministry may be attached for a year to Secondary Schools in England; and in suitable cases the Board of Education may make a special grant under Article 43 of the Regulations for Secondary Schools towards meeting the expense involved in such an arrangement in Secondary Schools upon the grant list.

The grants made will, as a rule, be thirty-five pounds for each Assistant, or half the cost of maintenance where the total cost does not exceed seventy pounds.

Further information as to the conditions under which these grants will be made, or under which schools not eligible for grants may receive French Assistants, will be found in Rule 56, a copy of which has been sent to the Head Master or Head Mistress of every Secondary School.

### Board of Agriculture and Fisheries.

The President of the Board of Agriculture and Fisheries has appointed a Departmental Committee to arrange for the testing, adaptation, and improvement of machines likely to prove of value to agriculture, to examine inventions and new devices, and to advise as to the further steps which should be taken to promote the development of agricultural machinery. The Committee consists of the following:—Sir Douglas Newton, K.B.E. (Chairman), Mr. G. C. Baddon, Mr. Thompson Close, Major J. G. Merrison, Captain B. J. Owen, Mr. H. G. Richardson, Professor R. S. Seton, Mr. J. G. Stewart.

The Secretary of the Committee is Mr. V. E. Wilkins, Board of Agriculture, 72, Victoria Street, London, S.W. 1.

## PRIMARY SCHOOL NOTES.

### A Victory Concert by London's Children.

A "VISITOR FROM A SECONDARY SCHOOL" writes :

One could wish that it had been possible for an audience of the British public to hear the Victory Concert given by 20,000 children of the L.C.C. Schools on June 25 in the Albert Hall. They would then cease troubling about the non-appreciation of English music, and would have come away astounded by the perfection of everything connected with singing in our London State Schools.

The main features were correct pitch, expression, a sense of rhythm, attention, and spontaneous obvious delight in their work by the children. There was really no hitch from beginning to end; the "staff" work was perfect from "General" Dr. Borland downwards. Perfect "unity of command" gave perfect results, and the performers knew this when they cheered Dr. Borland again and again after all was over. What struck one most was the response of the children to good literary words set by master hands. Strictly speaking there was only one song actually written for children, Parry's "You'll get there." It proved its simple yet high worth by gaining the honour of repetition. It may be noted that the repetition was as finished and artistic a performance as the first rendering. Stanford's vivacious setting of "A Ballad of the Ranks," by Conan Doyle, was accorded a repetition of the last verse, but, curiously enough, one felt that apart from the "go" and rhythm of the words, the children did not feel the music exactly to their mind. This is really the only half criticism that can be made on the whole concert.

The Te Deum to Oakley's quadruple chant never wearied or slackened. Any Oratorio Choir would have been thankful for a Chorus that could sing "O Lovely Peace" as smoothly and inspiringly as these boys and girls, and still more thankful for a Chorus that could watch the beat, sustain and sing without a book the "Hallelujah Chorus." Purcell's "Fairest Isle," which rightly was followed by the Parry item, evidently delighted the performers. The "American Battle Hymn," with its grand flowing exposition of glorious words, was admirably done, especially the last verse sung *pp.* by the girls and repeated *pp.* by the whole Chorus, showing what could be done by intelligent explanation and appeal to the message of the words.

The whole concert was a tribute to the splendid work of the Director of Music, the sound training of the teachers, and the true spirit of music imbued into the children, who sang as artists, and as English artists.

The organist, Mr. H. L. Balfour, thoroughly understood his work. One of the most interesting features of the afternoon was the willing away by the organist of a long wait by well-known airs—which were vigorously whistled by the boys. A London boy's whistle is something to hear at any time, but on this occasion it was extraordinarily interesting, precise and tuneful. The taste of the children was clearly shown by its varied volume. "The Marseillaise," "Men of Harlech," and one or two Scottish classics were loudly applauded and demanded again. Two trumpets and three drums were skilfully used with real judgment where necessary. The absolute and easy discipline of the vast crowd of children told its tale of constant devoted work from all concerned.

We could wish that a standard of musical performance at all approaching this were even aimed at in our Secondary Schools, wherein there is too often a very poor conception of music as an element in education.

### The London Teachers' Case.
